List of Tables

Fishing and Hunting: 1985

1. Participants in fishing and hunting in the U.S.
2. Fishermen and hunters, days of participation, and trips, by type of fishing and hunting in the U.S.
3. Fishermen and hunters, trips and days of participation in the U.S. and in other countries.
4. Fishermen, trips, and days of fishing in the U.S. and other countries, by type of fishing.
5. Fishermen, trips, and days and hours of fishing, by type of fishing in the U.S.
6. Freshwater fishermen and days of fishing, by type of fish and place in the U.S.
7. Great Lakes fishermen and days of fishing, by type of fish and place in the U.S.
8. Saltwater fisherman and days of fishing, by selected anadromous species and place in the U.S.
9. Hunters, trips, and days and hours of hunting, by type of hunting in the U.S.
10. Big game hunters and days of hunting, by type of game and place in the U.S.
11. Small game hunters and days of hunting, by type of game and place in the U.S.
12. Migratory bird hunters and days of hunting, by type of game and place in the U.S.
13. Hunters of other animals and days of hunting, by type of game and place in the U.S.
14. Selected characteristics of fishermen and hunters.
15. Selected characteristics of fishermen and hunters 6-15 years old.
16. Selected characteristics of fishermen, by type of fishing.
17. Selected characteristics of hunters, by type of hunting.
18. Summary of expenditures for fishing and hunting, by type of fishing and hunting.
19. Expenditures for fishing and hunting.
20. Expenditures for fishing.
21. Expenditures for freshwater fishing.
22. Expenditures for freshwater fishing, except Great Lakes.
23. Expenditures for Great Lakes fishing.
24. Expenditures for saltwater fishing.
25. Expenditures for hunting.
26. Expenditures for big game hunting.
27. Expenditures for small game hunting.
28. Expenditures for migratory bird hunting.
29. Expenditures for hunting other animals.
30. Special equipment expenditures for fishing and hunting.
31. Freshwater fishermen and hunters who purchased licenses or were exempt.
32. Expenditures for licenses, stamps, tags and permits, by primary use of license and place in the U.S.
33. Expenditures for licenses, by primary use of license and type of license.
34. Selected characteristics of freshwater fishermen and hunters who purchased licenses.
35. Freshwater fishermen and days of fishing, by type of water and place in the U.S.
36. Great Lakes fishermen and days of fishing, by Great Lake and mode of fishing.
37. Saltwater fishermen, by type of water, mode of fishing, and place in the U.S.
38. Selected characteristics of freshwater fishermen, by type of water in the U.S.
39. Hunters and days of hunting on public and private land, by type of hunting in the U.S.
40. Hunters and days of hunting on public land, by type of hunting in the U.S.
41. Hunters and days of hunting on wetlands and extent of wetlands use, by type of hunting in the U.S.
42. Hunters and days of hunting on public land in the U.S., by selected characteristic.
43. Fishermen using special fishing methods, ice fishermen and days of ice fishing, by type of fishing in the U.S.
44. Hunters using special weapons.
45. Sportsmen using owned or leased land for fishing or hunting in the U.S.
46. Sportsmen owning or leasing land for the primary purpose of fishing or hunting and acres owned or leased in the U.S.
47. Sportsmen owning or leasing land that included wetlands for the primary purpose of fishing or hunting and acres owned or leased, by type of fishing or hunting in the U.S.
48. Expenditures for land owned or leased for the primary purpose of fishing or hunting, by type of fishing or hunting in the U.S.
49. Fishermen and hunters participating for the first time in 1985, by age group.
50. Fishermen and hunters participating in 1984 but not in 1985, by age group.
51. Age first hunted, years of hunting and introduction to hunting, by sex.
52. Most recent year of hunting, by age group.
53. Fishermen, expenditures, and days of fishing, by average one-way distance traveled and type of fishing in the U.S.
54. Hunters, expenditures, and days of hunting, by average one-way distance traveled and type of hunting in the U.S.
55. Fishermen and days of fishing in state of residence and in other states, by type of fishing.
56. Hunters and days of hunting in state of residence and in other states, by type of hunting.

Nonconsumptive Wildlife-Associated Recreation: 1985

- 57. Nonconsumptive participants 6–15 years old, by nonconsumptive activity.
- 58. Primary nonresidential participants, trips and days of participation in the U.S. and in other countries.
- 59. Participants, trips, days and hours of participation in primary nonresidential activities, by place of activity in the U.S.
- 60. Primary nonresidential participants, by area or site visited and place in the U.S.
- 61. Primary nonresidential participants, by wildlife observed, photographed, or fed and place in the U.S.
- 62. Secondary nonresidential participants, by frequency of trips and importance of wildlife on most trips in the U.S.
- 63. Nonresidential participants visiting public areas in the U.S., by level of interest.
- 64. Participation in primary residential activities.
- 65. Secondary residential participants, by frequency of observation and wildlife observed.
- 66. Expenditures for nonconsumptive wildlife-related recreation.
- 67. Selected characteristics of participants in primary nonresidential activities in the U.S.

- 68. Selected characteristics of participants in primary residential activities.
- 69. Selected characteristics of primary nonconsumptive participants 6–15 years old.
- 70. Selected characteristics of secondary nonconsumptive participants.
- 71. Participation of nonconsumptive participants in fishing and hunting, by type of fishing and hunting.
- 72. Participation of sportsmen in nonconsumptive activities, by nonconsumptive activity.
- State Wildlife-Associated Recreation: 1985**
- 73. Fishermen and hunters, by sportsman's state of residence.
- 74. Fishermen and hunters 6–15 years old, by sportsman's state of residence.
- 75. Fishermen and hunters, by fisherman's or hunter's state of residence.
- 76. Fishermen and hunters, by state where fishing or hunting took place.
- 77. Hunters, by type of hunting and state where hunting took place.
- 78. Participants in nonconsumptive activities, by participant's state of residence.
- 79. Participants in nonconsumptive activities 6–15 years old, by participants state of residence.
- 80. Participants in wildlife-associated recreation, by participants state of residence.
- 81. Participants in wildlife-associated recreation 6–15 years old, by participant's state of residence.
- 82. Freshwater (except Great Lakes) fishermen and days of fishing, by state where fishing took place.
- 83. Great Lakes fishermen and days of Great Lakes fishing, by state where fishing took place.
- 84. Saltwater fishermen and days of saltwater fishing, by state where fishing took place.
- 85. Days of fishing, by state where fishing took place and fisherman's state of residence.
- 86. Days of hunting, by state where hunting took place and hunter's state of residence.
- 87. Days of hunting, by type of hunting and state where hunting took place.
- 88. Days of primary nonresidential activity, by state where activity took place and participant's state of residence.
- 89. Expenditures for wildlife-associated recreation, by participant's state of residence.
- 90. Expenditures for fishing, by fisherman's state of residence.
- 91. Expenditures for hunting, by hunter's state of residence.
- 92. Expenditures for nonconsumptive activities, by participant's state of residence.
- 93. Trip-related expenditures for fishing, hunting, and primary nonresidential activities, by state where spending took place.

Foreword

Effective stewardship for fish and wildlife requires a combination of biological knowledge and detailed information about the activities of sportsmen and others who make use of these resources. Since 1955, the National Survey of Fishing, Hunting and Wildlife-Associated Recreation has provided detailed information about recreational uses of fish and wildlife. Survey results help managers anticipate new fish and wildlife recreation patterns that require decisions and action.

The 1985 Survey marks the seventh time since 1955 a national survey has been conducted to measure fishing and hunting activities, and it is the second survey to provide details about nonconsumptive wildlife-related activities. The 1985 Survey was requested by state natural resource agencies through the International Association of Fish and Wildlife Agencies. It was designed and conducted by the U.S. Fish and Wildlife Service with the cooperation and assistance of the U.S. Bureau of the Census, and financed by taxes on fishing equipment, boat fuel, hunting equipment, and ammunition under the Federal Aid in Sport Fish and Wildlife Restoration Acts.

More than three of every four Americans enjoyed some type of fish or wildlife activity in 1985, adding over 55 billion dollars to local, state, and national economies. Many of these Americans participated in more than one form of wildlife-associated activity. It is interesting to note that nine out of ten sportsmen (those who fished or hunted) also reported participating in nonconsumptive activities, such as observing, feeding, or photographing wildlife, apart from their sport.

Results from the 1985 Survey will be used by the federal and state governments and others to forecast demands for fish and wildlife recreation, evaluate impacts on local and state economies, and identify trends in participation and expenditures. These efforts are important for the effective management of fish and wildlife resources for this and future generations.

Frank Dunkle, Director
Fish and Wildlife Service

United States Department of the Interior

Survey Background and Method

The 1985 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation was designed to gather information about American participation in fishing, hunting, and other forms of wildlife-associated recreation. The national survey has been conducted every 5 years since 1955 and represents one of the oldest and most comprehensive continuing recreation surveys. The purpose of the survey is to gather information on the numbers of fishermen and hunters in our country, as well as how often they participate and how much they spend on these activities. The 1985 survey was the first to gather state-level information about those who observe, photograph, or feed wildlife. Differences and similarities between the 1985 survey and previous surveys are discussed in Appendix C.

The planning process for the 1985 survey began in 1983 when the International Association of Fish and Wildlife Agencies (IAFWA) passed a resolution asking the U.S. Fish and Wildlife Service to conduct a national survey of wildlife-associated recreation in 1985. As with previous national surveys, funding for the survey came from the administrative portion of Federal Aid funds produced by excise taxes on fishing and hunting equipment under the Dingell-Johnson, Pittman-Robertson, and Wallop-Breaux Federal Aid for Fish and Wildlife Restoration Acts.

In early 1984, the IAFWA was asked to help ensure that fish and game agencies of the 50 states had an opportunity to participate in all phases of planning and design of the survey. Four regional technical committees were set up under the auspices of the IAFWA. Made up of representatives of state fish and game agencies, the committees served as a point of contact for the survey between the states and the Fish and Wildlife Service. They provided initial suggestions and

comments about what information the survey should produce and how it should be conducted. The technical committees reviewed alternatives for survey design, draft questionnaires, and finally, preliminary tabulations of survey results. Reviews of draft materials were also solicited from state fish and game directors and a cross-section of sportsmen's and conservation organizations.

The 1985 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation produced both this national report and individual state reports for the 50 states. The survey was conducted by the U.S. Bureau of the Census in two phases. In the first phase, a sample of almost 111,000 households nationwide was screened, mostly by telephone, to determine who in the household had fished, hunted, or engaged in a nonconsumptive wildlife-associated activity in 1985. The screening was done in January–March of 1986. Information about all household members 6 years old and older was obtained from an adult member of each household. A 93 percent response rate was achieved for the screening.

The second phase of the survey consisted of detailed in-person interviews conducted in the spring of 1986 with subsamples of fishermen, hunters, and nonconsumptive participants who were identified in the screening phase. Participants in this detailed phase were limited to those at least 16 years old because of the length and complexity of the questionnaires. Sample sizes were designed to provide statistically reliable results at the state level for fishing, hunting and nonconsumptive activities. A total of 33,973 fishermen and hunters and 30,177 nonconsumptive users were in the detailed sample. Altogether, fishermen and hunters completed 28,011 interviews and there were 26,671 completed interviews with nonconsumptive participants.

Highlights

Introduction

The National Survey of Fishing, Hunting, and Wildlife-Associated Recreation reports results from interviews with Americans about their fishing, hunting and other fish and wildlife-related recreation. It has become the most important source of information about the vast array of recreational opportunities provided by America's fish and wildlife resources. The 1985 National Survey, the seventh to be conducted since 1955, was requested by the states through the International Association of Fish and Wildlife Agencies. The U.S. Bureau of the Census selected the sample, conducted the interviews and prepared tabulations for this report. The survey was funded by taxes on fishing and hunting equipment and boat fuel under the Federal Aid for Sport Fish and Wildlife Restoration Acts.

This report focuses on the 1985 fishing, hunting and nonconsumptive wildlife-related activities of Americans 16 years of age and older. Summary measures are reported for wildlife-associated recreation by those 6 to 15 years of age and for trapping participation by those 6 years old and older. Additional information about the scope and coverage of the survey appears in the Survey Background and Method section of this report. The remainder of this section provides an overview of how the survey results are reported.

Wildlife-Associated Recreation

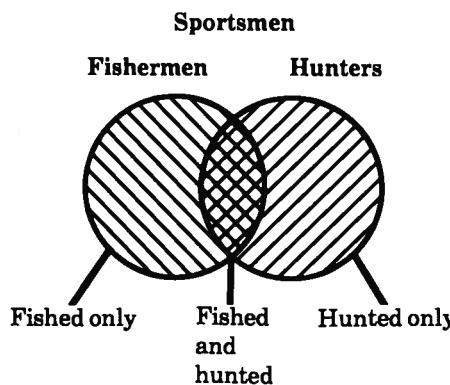

Wildlife-associated recreation includes fishing, hunting, and nonconsumptive wildlife activities. These categories are not mutually exclusive because many individuals enjoyed fish and other wildlife resources in several ways in 1985. Wildlife-associated recreation is reported in two major categories: (1) fishing and hunting, and (2) nonconsumptive uses of wildlife resources. This report uses traditional terms to describe fishing and hunting. Terms used to report nonconsumptive activities are introduced at the end of this section.

Fishing and Hunting

This survey reports information about residents of the United States who fished or hunted in 1985, regardless of whether they were licensed. The fishing and hunting sections of this report are organized to report three groups: (1) sportsmen, (2) fishermen, and (3) hunters.

Sportsmen

Sportsmen are men and women who fish or hunt. Individuals who fished or hunted commercially in 1985 are reported as sportsmen only if their recreation included some fishing or hunting. The sportsmen group is composed of the three subgroups in the diagram below: (1) those who fish and hunt, (2) those who fish only, and (3) those who hunt only. The sportsmen group is different from the sum of fishermen plus hunters because it does not double count those who both fish and hunt.

Fishermen

Fishermen are sportsmen who fish and hunt plus those who fish only. The fishermen group includes not only licensed hook and line anglers, but also those who use special methods such as bow and arrow fishing and those who have no license. Three types of fishing are reported. These are fishing in (1) freshwater, except the Great Lakes, (2) Great Lakes, and (3) saltwater. Since many anglers enjoy more than one type of fishing, the total number of fishermen is less than the sum of the three types of fishing.

Hunters

Hunters are sportsmen who fish and hunt plus those who hunt only. The hunter group includes not only licensed hunters using common hunting practices, but also those who hunt with special weapons such as a muzzle loader or a bow and arrow and those who have no license. Four types of hunting are reported. These are hunting for (1) big game, (2) small game, (3) migratory birds, and (4) other animals. Since many hunters enjoy more than one type of hunting, the sum of hunters for big game, small game, migratory birds and other animals exceeds the total number of hunters.

Nonconsumptive Wildlife Activities

Many Americans, including sportsmen, enjoy wildlife-associated recreation which is not fishing, hunting or trapping. These nonharvesting activities, such as feeding, photographing and observing fish and other wildlife, are nonconsumptive wildlife activities. Four types of nonconsumptive activity are reported. These four types are based on a framework with two criteria: (1) whether the nonconsumptive wildlife use is the primary purpose of the activity or secondary to some other purpose, and (2) whether the nonconsumptive activity is residential (within a mile of the home) or nonresidential (more than a mile from home). Some men and women participate in many or all of the four types of nonconsumptive wildlife activities, so the sum of participants in each type will be greater than the total number of nonconsumptive participants. The four types of nonconsumptive wildlife activities are introduced below.

	Non-residential	Residential
Primary	XX	XX
Secondary	XX	XX

Primary Nonresidential

This group includes persons who take trips or outings of at least one mile for the primary purpose of observing, photographing, or feeding fish and wildlife. Trips to fish or hunt and trips to zoos, circuses, aquariums and museums are not considered nonconsumptive wildlife activities.

Primary Residential

This group includes those whose activities around the home involve one or more of the following: (1) closely observing or trying to identify birds or other wildlife, (2) photographing wildlife, (3) feeding birds or other

wildlife on a regular basis, (4) maintaining natural areas of at least one-quarter acre for which benefit to wildlife is an important concern, (5) maintaining plantings (shrubs, agricultural crops, etc.) for which benefit to wildlife is an important concern, or (6) visiting public parks within one mile of home for the purpose of observing, photographing, or feeding wildlife.

Secondary Nonresidential

This group includes persons who enjoy seeing or hearing wildlife while on a trip or outing of at least one mile that is taken for another purpose, such as camping, driving for pleasure, or boating. Trips for shopping or to go to work or school are not included.

Secondary Residential

This group is composed of persons who enjoy seeing or hearing wildlife while pursuing other activities around the home, such as those who enjoy hearing songbirds while doing yard work.

Summary

Wildlife-associated recreation was one of this country's most popular forms of outdoor recreation in 1985. About 140 million Americans, 77 percent of the U.S. population 16 years of age and older, enjoyed some form of wildlife-related recreation. This group included 46.4 million persons who fished, 16.7 million who hunted, and 134.7 million who participated in nonconsumptive wildlife-related recreation. The nonconsumptive participants included 109.6 million for whom nonconsumptive activities were the primary purpose of a trip or activity around the home and 127.4 million who enjoyed wildlife in the context of an activity that had another primary purpose.

While the detailed information in this report emphasizes the activities of those 16 years old and older, large numbers of youths 6 through 15 years of age were involved in wildlife-related activities. In 1985, 12.2 million youths fished, 1.8 million hunted, and 17.8 million observed, fed, or photographed wildlife as the primary purpose of an activity. Many of these individuals were among the 25 million youths who enjoyed wildlife while participating in activities that had another primary purpose.

There was a considerable overlap in the activities of fishermen, hunters and nonconsumptive participants 16 years of age and older. Within the sportsmen group, 12.8 million persons both fished and hunted in 1985. Among sportsmen, 90 percent of fishermen and 89 percent of hunters participated in nonconsumptive activities. From another perspective, this meant that fishing and hunting were popular among nonconsumptive participants in 1985. About 41 percent of primary nonresidential participants fished or hunted, while 29 percent of primary residential participants went fishing or hunting in addition to the wildlife-related activities they engaged in around their homes.

Expenditures primarily for wildlife-associated activities by participants 16 years of age and older totaled \$55.7 billion in 1985. Of this total, \$28.1 billion were for fishing, \$10.1 billion were for hunting, and \$14.3 billion were for nonconsumptive activities. There were an additional \$3.2 billion of

unspecified fishing or hunting expenditures in 1985. These 1985 expenditures made fishing, hunting, and nonconsumptive wildlife activities a significant part of the American economy.

Fishing

46.4 million fishermen
976.6 million days of fishing
\$28.1 billion fishing expenditures

Fishing

In 1985, 46.4 million anglers 16 years old and older enjoyed a variety of sport fishing opportunities. These anglers spent 976.6 million days and \$28.1 billion pursuing their sport, an average of 21 days and \$607 per fisherman in 1985. There were 39.8 million freshwater fishermen who spent 827.9 million days and \$19.4 billion for freshwater fishing in 1985, an average of 21 days and \$487 per angler. The freshwater total included 38.4 million anglers who fished in freshwater other than the Great Lakes. These fishermen accounted for 785.9 million fishing days and \$17.8 billion of fishing expenditures, an average of 20 days and \$463 per fisherman. Also in the freshwater total were 3.8 million Great Lakes fishermen who accounted for 46.4 million days and \$1.6 billion, an average of 12 days and \$414 per Great Lakes angler. Fishing in saltwater accounted for 13.7 million anglers, 155.2 million days, and \$7.2 billion, an average of 11 days and \$528 per saltwater fisherman in 1985.

Hunting

16.7 million hunters
334.0 million days of hunting
\$10.1 billion hunting expenditures

Hunting

Since the earliest days of this nation, hunting has provided a source of satisfaction to millions of Americans. In 1985, 16.7 million persons hunted,

representing a total effort of 334.0 million hunting days and expenditures of \$10.1 billion. Hunters spent an average of 20 days in the field in 1985. Interestingly, hunters spent an average of \$603 in 1985 - about the same amount that was spent by the average fisherman. Hunting for big game (deer, elk, etc.) accounted for 12.5 million hunters, 131.3 million days, and \$6.0 billion, an average of 10 days and \$476 per big game hunter. Small game hunting (rabbits, squirrels, etc.) drew 10.8 million hunters. These small game hunters spent 132.3 million days and \$1.8 billion pursuing their sport, an average of 12 days and \$168 per hunter. There were 5.0 million migratory bird hunters in 1985. They spent 41.7 million hunting days and \$1.1 billion in pursuit of migratory birds, an average of 8 days and \$216 per hunter. Hunting for other animals, such as foxes and raccoons, attracted 2.8 million hunters who spent 47.1 million days in the field and \$356 million in 1985, an average of 17 days and \$125 per hunter.

Nonconsumptive Wildlife Use

134.7 million participants
\$14.3 billion nonconsumptive expenditures

Nonconsumptive Wildlife-Related Recreation

Observing, photographing, and feeding fish and wildlife provided enjoyment in 1985 for 134.7 million Americans 16 years old and older, including many who were fishermen or hunters. These nonconsumptive participants included 29.3 million primary nonresidential participants who took trips of at least 1 mile from their home for the primary purpose of observing, photographing, or feeding wildlife, 89.5 million secondary nonresidential participants who enjoyed wildlife while on trips taken for other purposes, 105.3 million primary residential participants who took an active interest in wildlife around their homes, and 117.4 million secondary residential participants who enjoyed wildlife around their homes while pursuing activities that were not primarily wildlife-related.

These 134.7 million participants spent over \$14.3 billion for their nonconsumptive activities in 1985, an average of \$221 per spender. The total spending included \$4.4 billion for trip-related expenditures, nearly \$9.4 billion for nonconsumptive equipment, and \$480 million for other expenditures. Trip-related expenditures for secondary nonresidential trips were excluded from total spending because these costs were not surveyed.

Wildlife-Associated Recreation

A total of 167.5 million Americans 6 years of age and older participated in one or more kinds of wildlife-associated recreation in 1985. This total included 58.6 million individuals who fished, 18.5 million who hunted, and 161.0 million who engaged in at least one type of nonconsumptive activity.

While the major emphasis of this survey was on the 77 percent of Americans 16 years old and older who participated in wildlife-associated recreation in 1985, more than three of every four youths between the ages of 6 and 15 also participated in wildlife-related activities. Total participants between the ages of 6 and 15 numbered 27.4 million. Over 12.2 million youths fished, 1.8 million hunted, and 26.3 million engaged in nonconsumptive activities.

Over 140 million Americans 16 years old and older enjoyed wildlife-associated recreation. This group included 46.4 million anglers, 16.7 million hunters, and 134.7 million nonconsumptive participants.

Expenditures for Wildlife-Associated Recreation

Expenditures for wildlife-associated recreation by participants 16 and older totaled nearly \$56 billion in 1985. Equipment expenditures were \$31 billion, 56 percent of the total. About \$21 billion, 38 percent of the total, were trip-related expenditures, such as food, lodging, transportation, and equipment rental. The remaining 6 percent, \$3 billion, included spending for magazine subscriptions, membership dues and contributions, land leasing or

ownership for wildlife-associated recreation, and licenses, stamps, tags and permits for fishing and hunting.

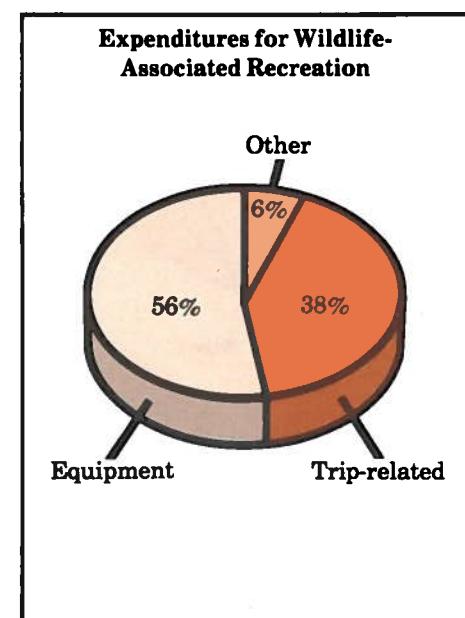

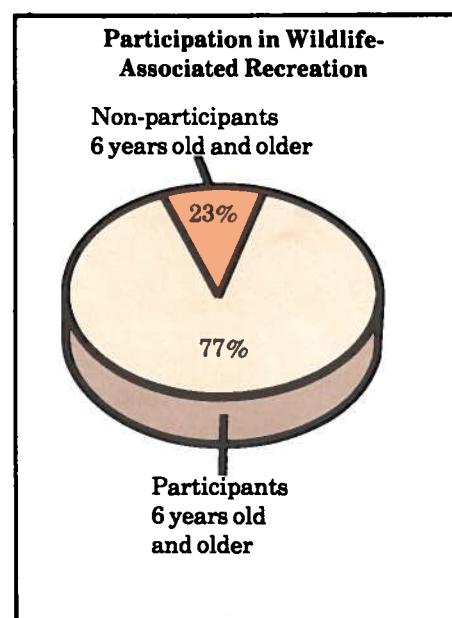

Activity	16 years old and older (millions)	6-15 years old (millions)
Total participants	140.1	27.4
Sportsmen	50.3	12.6
Fishermen	46.4	12.2
Hunters	16.7	1.8
Nonconsumptive	134.7	26.3
Primary	109.6	17.8
Secondary	127.4	25.0

Sources: Tables 1, 15, 57, 78, 80, and 81.

Wildlife-Associated Expenditures

Total expenditures	\$ 55,660 million
Total trip-related	\$ 21,426 million
Food and lodging	\$ 10,063 million
Transportation	\$ 7,030 million
Other trip costs	\$ 4,333 million
Total equipment expenditures	\$ 30,909 million
Fishing, hunting and nonconsumptive equipment	\$ 9,152 million
Auxiliary equipment	\$ 1,833 million
Special equipment	\$ 19,924 million
Total other expenditures	\$ 3,325 million
Magazines	\$ 385 million
Membership dues and contributions	\$ 368 million
Land leasing and ownership	\$ 1,752 million
Licenses, stamps, tags and permits	\$ 820 million

Sources: Tables 18 and 66.

Fishing and Hunting

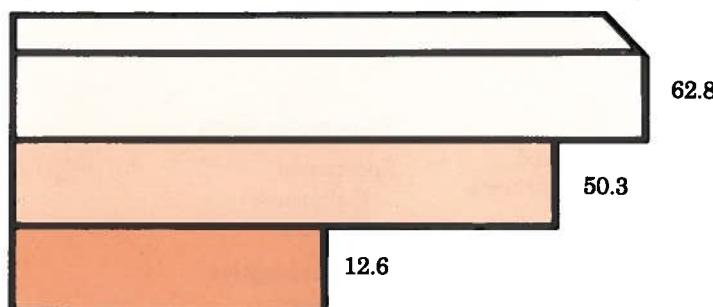

In 1985, 62.8 million Americans 6 years old and older went fishing or hunting. About 58.6 million of these sportsmen went fishing and 18.5 million hunted. A substantial number, 14.2 million, fished and hunted.

There were about 12.6 million youths 6 to 15 years of age who went fishing or hunting in 1985. This group included 12.2 million who fished and 1.8 million who went hunting.

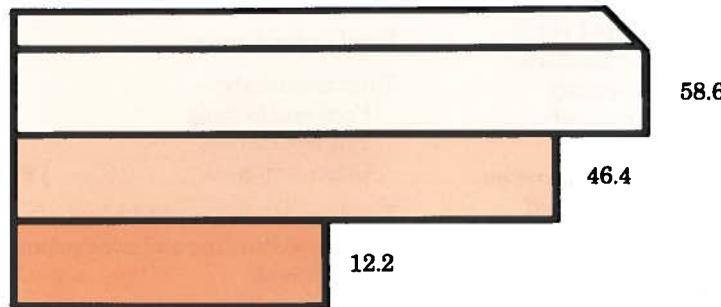

Among the 62.8 million sportsmen who were active in 1985, 50.3 million were 16 years of age or older. In this age group, 46.4 million went fishing and 16.7 million went hunting.

Expenditures by sportsmen 16 years old and older totaled \$41.4 billion in 1985. Food and lodging, transportation, equipment rental and other trip-related expenditures were \$17.0 billion, or 41 percent of the total spent by sportsmen. Equipment expenditures were \$21.6 billion, 52 percent of the total. Less than 2 percent of spending, \$820 million, was for licenses, stamps, tags and permits. Other expenditures for fishing and hunting, (magazine subscriptions, membership dues and contributions, and land leasing or ownership) totaled \$2.0 billion, 5 percent of total expenditures.

Nonconsumptive Wildlife-Associated Recreation

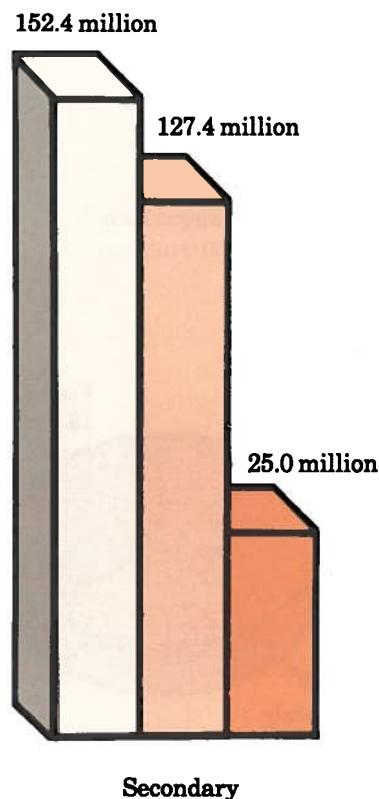

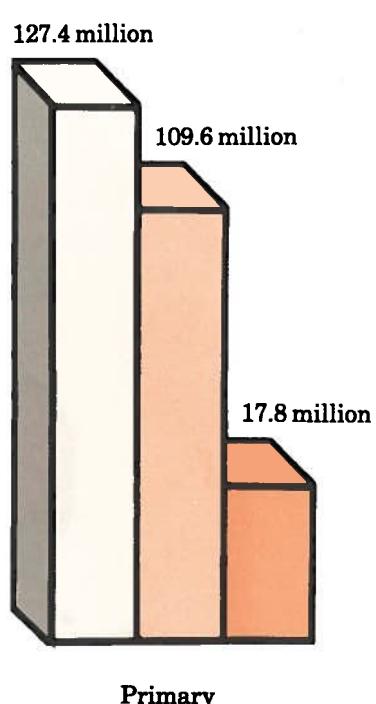

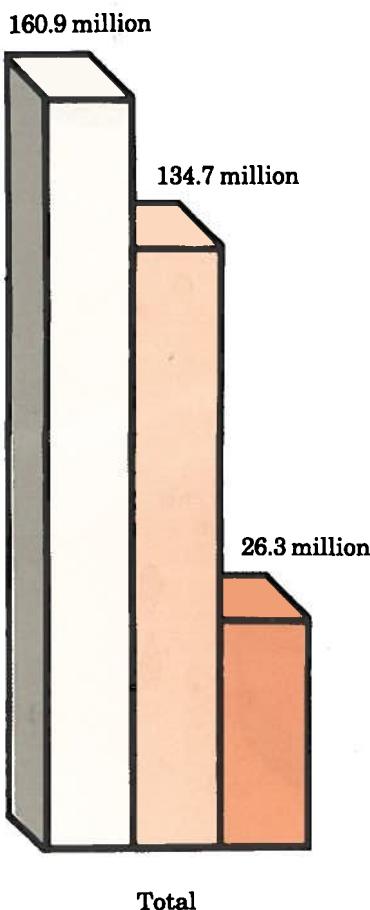

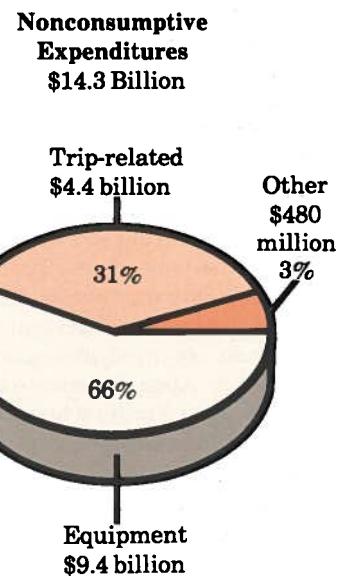

Nearly 161 million Americans 6 years old and older observed, photographed, or fed birds, fish, and other wildlife in 1985. Of this total, 26.3 million were between the ages of 6 and 15, while 134.7 million were 16 years old or older.

For 127.4 million participants 6 years old and older, the enjoyment of wildlife was the primary purpose or focus of an activity. This group, primary nonconsumptive participants, included 17.8 million individuals between the ages of 6 and 15 and 109.6 million participants 16 years old and older.

Participants who enjoyed wildlife in the context of some other activity totaled 152.4 million. Of these secondary nonconsumptive participants, 25.0 million were between the ages of 6 and 15, while 127.4 million were 16 years old and older. The majority of nonconsumptive

participants enjoyed both primary and secondary wildlife-related activities.

Expenditures by nonconsumptive participants 16 years old and older totaled \$14.3 billion in 1985. Trip-related expenditures of primary participants, such as spending for food and lodging, transportation, and equipment rental, were \$4.4 billion, or 31 percent of the total. Trip-related expenditures by secondary participants were not surveyed. Equipment expenditures by nonconsumptive participants were \$9.4 billion, 66 percent of the \$14.3 billion total. The remaining \$480 million, 3 percent of expenditures for nonconsumptive activities, included \$230 million for magazine subscriptions and \$250 million for dues and contributions to conservation or wildlife-related organizations.

Diversity of Participation in Wildlife-Associated Recreation

There were 50.3 million sportsmen 16 years old and older who fished or hunted in 1985. Those who both fished and hunted numbered 12.8 million. Among hunters, 76 percent fished, and 28 percent of all anglers went hunting.

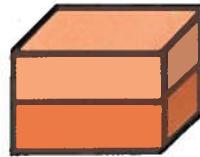

Most sportsmen participated in nonconsumptive activities. Almost 42 million fishermen, 90 percent of all fishermen, observed, photographed, or fed wildlife. About 89 percent of hunters, or 14.8 million hunters, participated in nonconsumptive activities.

Large numbers of primary nonconsumptive participants fished or

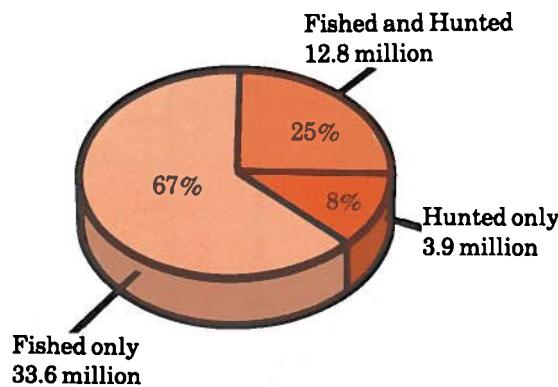

hunted in 1985. Of the 29.3 million primary nonresidential participants, 41 percent fished or hunted. Over 29 percent of primary residential participants went fishing or hunting in addition to enjoying wildlife-related activities around their homes.

About 76 percent of the 134.7 million nonconsumptive participants 16 years old and older were engaged in both primary and secondary nonconsumptive activities. Fewer than one in five nonconsumptive participants enjoyed wildlife only as a secondary activity. About 5 percent of all nonconsumptive participants were primary but not secondary participants.

Participation Rates for Fishing and Hunting, by Geographic Region

Participation rates for fishing and hunting varied across the United States. For the Nation as a whole, 26 percent of the population, or more than one in four Americans 16 years old or older, participated in fishing in 1985. Regional participation rates for fishing ranged from 36 percent in the West North Central Region to 17 percent in the Middle Atlantic. The West North Central, East North Central, South

Atlantic, East South Central, West South Central, and Mountain Regions had participation rates above the national average of 26 percent.

Nationwide, 9 percent of the population 16 years old and older went hunting in 1985. Regional participation rates ranged from 15 percent of the population in the West North Central Region to 5 percent in the Pacific. Regions with participation rates above the national average included the West North Central, West South Central, East South Central, and the Mountain Region.

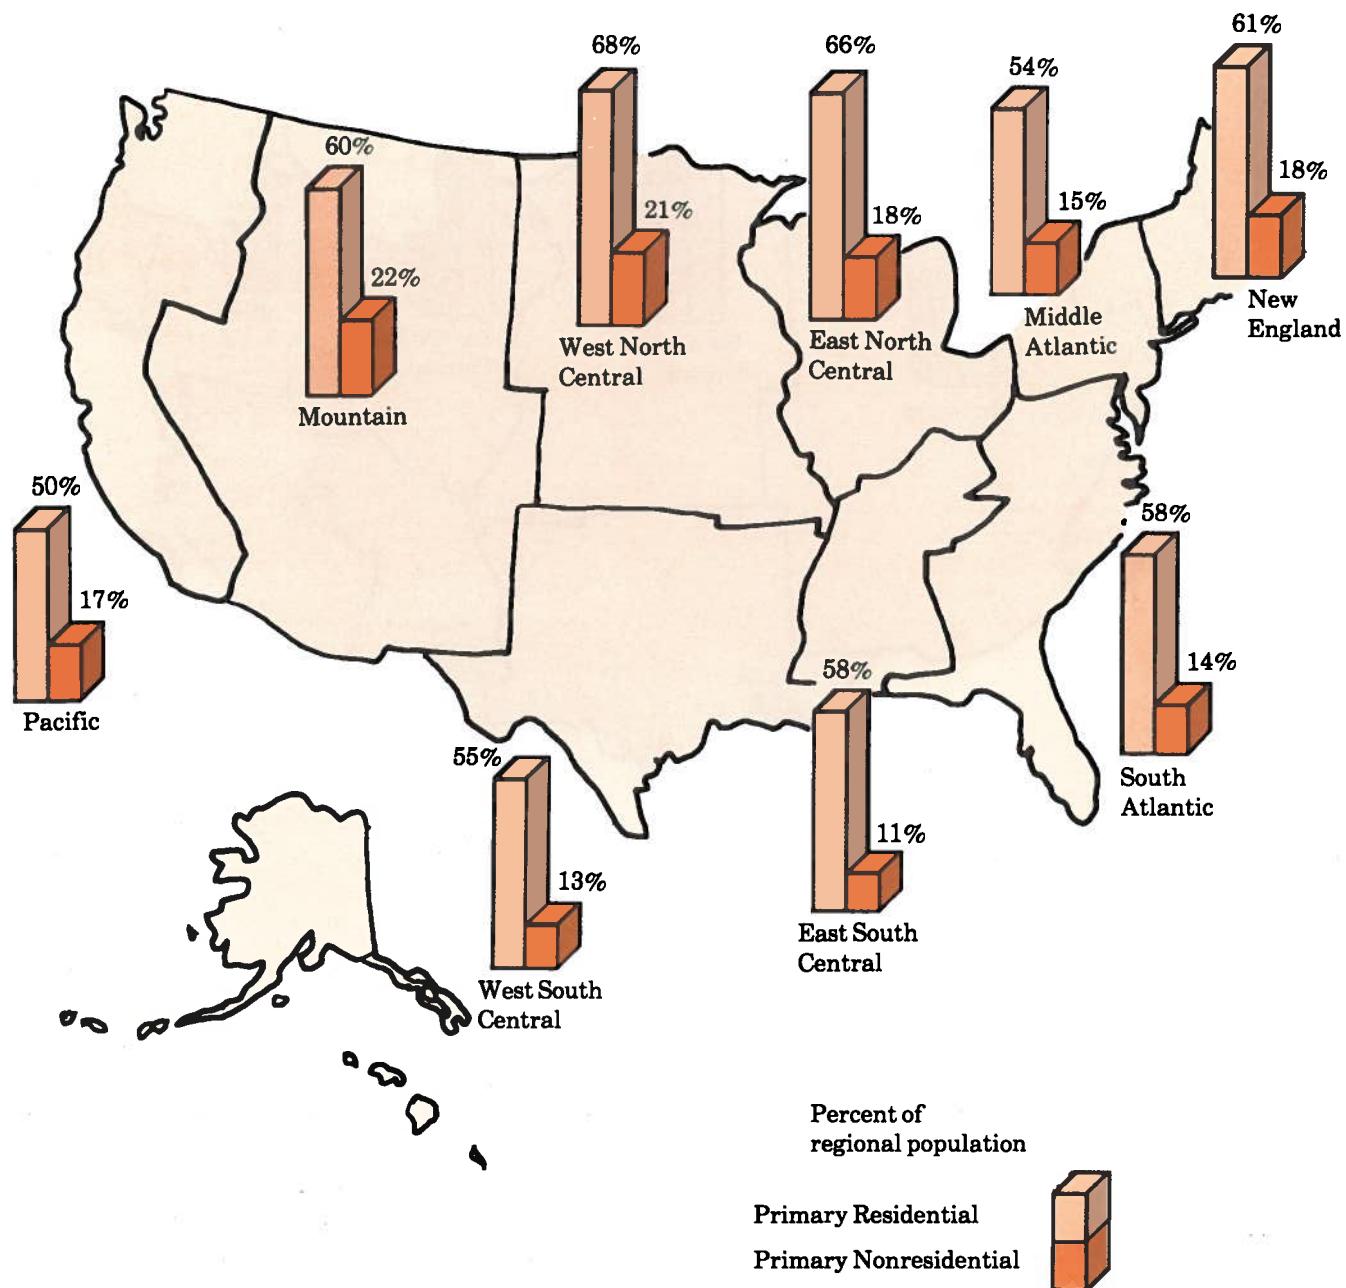

Participation Rates for Primary Nonconsumptive Activities, by Geographic Region

Participation rates for primary nonresidential and primary residential activities showed considerable variation across the country. A majority of Americans 16 years old or older, 58 percent, participated in primary residential activities in 1985. Participation rates ranged from 68 percent of the population in the West North Central Region to 50 percent in the Pacific Region. Residents of the

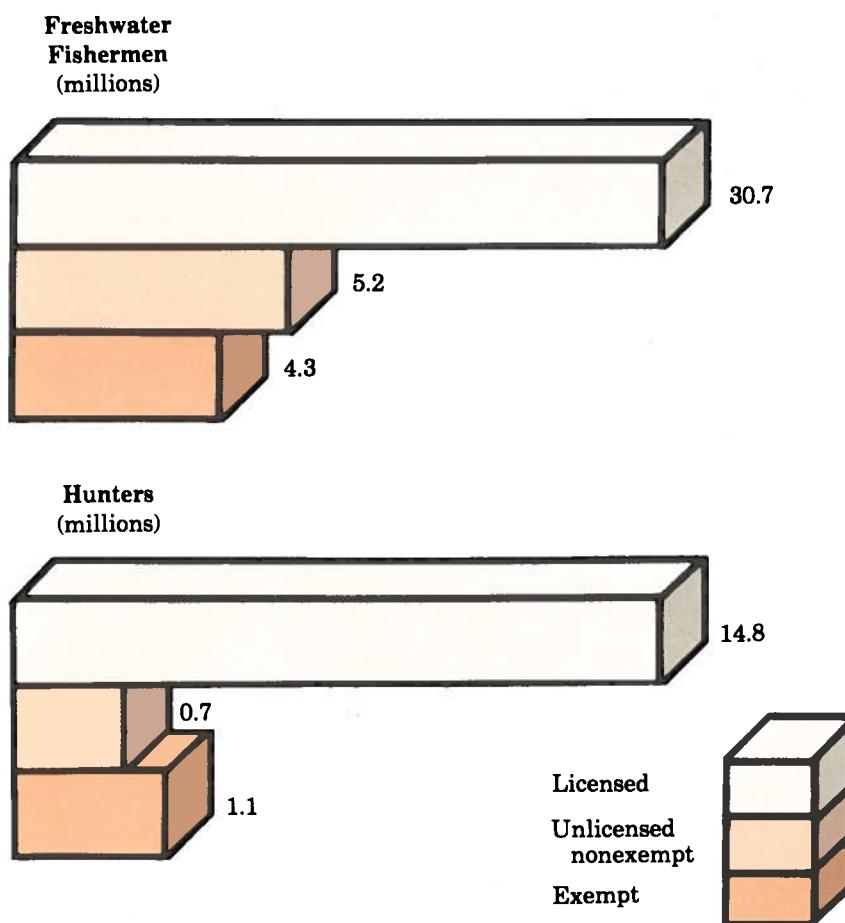

West North Central, East North Central, New England, and the Mountain Region participated at a rate above the national rate of 58 percent.

Nationwide, 16 percent of the U.S. population 16 years old and older took trips for the primary purpose of observing, photographing, or feeding wildlife. Participation rates ranged from 22 percent of the population in the Mountain Region to 11 percent in the East South Central. Regions with participation rates above the national participation rate included the Mountain, West North Central, East North Central, New England, and the Pacific Region.

Licensing of Sportsmen

The survey asked sportsmen about their fishing and hunting licenses. Of the 39.8 million freshwater fishermen aged 16 and older, 30.7 million, 77 percent, held licenses that were purchased in 1985. In comparison, 89 percent of those who hunted held licenses that were purchased in 1985. Sportsmen who purchased licenses prior to 1985 or those who purchased a license in 1985 but did not fish or hunt in 1985 are not included in these totals. State laws exempt some sportsmen from fishing and hunting licenses. For example, many of those over the age of 65 are exempt. For those 16 years of age and older, 11 percent of fishermen and 6 percent of hunters were exempt. In addition, 13 percent of those who fished and 4 percent of those who hunted responded that they were neither licensed nor exempt. The "neither licensed nor exempt" category represents those who misunderstood the licensing questions, those who participated in activities for which no license was required, (e.g. saltwater fishing in many states), and those who fished or hunted without the required license.

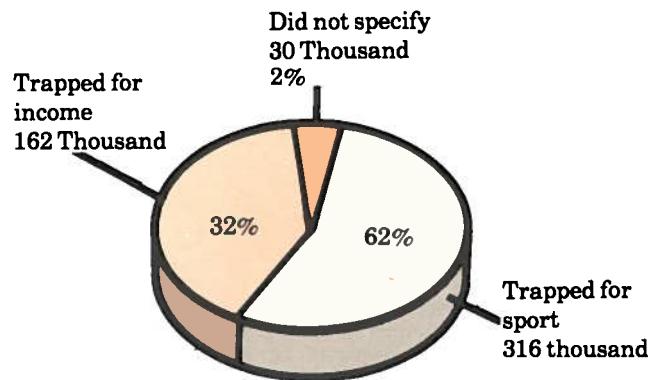

Trapping

The survey found that 508 thousand Americans 6 years old and older went trapping in 1985 for the primary purpose of obtaining fur pelts. The 62 thousand trappers 6 through 15 years of age spent 1.1 million days trapping, an average of 17 days per trapper. Among trappers in this age group, 66 percent trapped for sport, 32 percent trapped for income, and 2 percent did not respond to the question of whether their trapping was for sport or income.

The 447 thousand trappers 16 years old and older spent 10.4 million days trapping, an average of 23 days per trapper. In this age group, 62 percent trapped for sport, 32 percent trapped for income, and the remaining 6 percent did not respond to the question of whether their trapping was for sport or income.

Fishing

Major Fishing Highlights

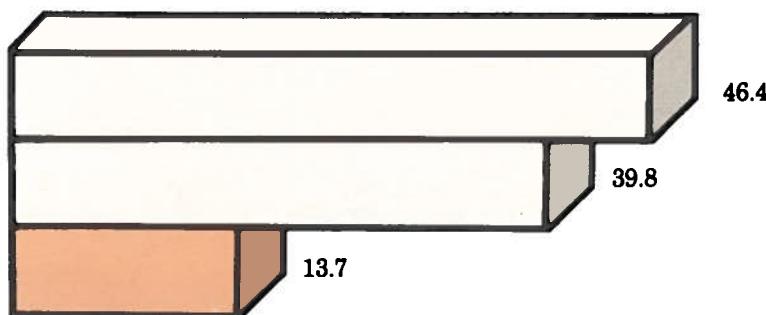

There were 46.4 million Americans 16 years old and older who fished in the U.S. in 1985. Of these fishermen, 86 percent, or 39.8 million, fished in freshwater. Saltwater fishing drew 13.7 million fishermen, or 30 percent of the total. Fishermen took 870.2 million fishing trips in 1985 and spent 976.6 million days on the water. Freshwater fishing accounted for 733.8 million fishing trips and 827.9 million days of fishing. Trips to fish in saltwater totaled 136.4 million in 1985 and accounted for 155.2 million days of fishing. Total expenditures for fishing in 1985 were \$28.1 billion. Freshwater fishing expenditures of \$19.4 billion accounted for 69 percent of the total, and saltwater fishing expenditures of \$7.2 billion accounted for 26 percent of the total. The remaining fishing expenditures, \$1.5 billion, were not specified as primarily for either freshwater or saltwater fishing.

Fishing Expenditures

About 95 percent of the 1985 total fishing expenditures of \$28.1 billion were spent for trip-related or equipment items. Food and lodging on fishing trips accounted for \$5.7 billion, or 20 percent of the total.

Transportation accounted for \$3.7 billion (13 percent) and other trip costs, such as guide fees or equipment rental, for \$3.9 billion (14 percent). Altogether, trip-related expenditures totaled \$13.3 billion, or 47 percent of all fishing expenditures. Total equipment expenditures were \$13.5 billion, or 48 percent of all fishing expenditures. By category of equipment, anglers spent \$2.8 billion (10 percent) for fishing equipment, \$482 million (2 percent) for auxiliary equipment (tents, backpacking gear, etc.), and \$10.3 billion (36 percent) for special equipment used primarily for fishing (boats, vans, etc.). Other fishing expenditures were \$109 million (less than 1 percent) for magazine subscriptions and membership dues or contributions, \$841 million (3 percent) to own or lease land primarily for fishing, and \$379 million (1 percent) for licenses, stamps, tags and permits.

Freshwater Fishing Highlights

About 39.8 million Americans 16 years old and older, 86 percent of all fishermen, fished in freshwater in 1985. Freshwater fishing accounted for 733.8 million fishing trips and 827.9 million days of fishing. Excluding the Great Lakes, there were 38.4 million freshwater anglers in 1985. These fishermen took 692.8 million fishing trips and accounted for 785.9 million fishing days. The 3.8 million freshwater fishermen who fished the Great Lakes in 1985 took 41.0 million fishing trips to the Great Lakes and fished in them on 46.4 million days.

Expenditures for freshwater fishing totaled \$19.4 billion. Great Lakes fishing accounted for \$1.6 billion, or 8 percent of freshwater fishing expenditures. The bulk of freshwater fishing expenditures, \$17.8 billion (92 percent), was for fishing in freshwater that was not the Great Lakes.

Freshwater Fishing Expenditures

Total trip-related expenditures by Americans 16 years old and older for fishing in freshwater other than the Great Lakes were \$8.7 billion in 1985 - 49 percent of the total \$17.8 billion spending for non-Great Lakes freshwater fishing. Within the category of trip-related expenditures, \$3.9 billion were spent for food and lodging, \$2.7 billion were for transportation, and other trip costs totaled \$2.1 billion. In addition to these trip-related expenditures, those who fished in freshwater that was not the Great Lakes spent \$1.8 billion for fishing equipment, \$311 million for auxiliary equipment (tents, backpacking gear, etc.), and \$6.0 billion for special equipment (vans, boats, etc.). Equipment expenditures for fishing in non-Great Lakes freshwater totaled \$8.0 billion, or 45 percent of the total spent for fishing in freshwater that was not the Great Lakes. Other expenditures for fishing in non-Great Lakes freshwater were \$66 million for magazine subscriptions and membership dues or contributions, \$705 million to own or lease land primarily for non-Great Lakes freshwater fishing, and \$325 million for licenses, stamps, tags, and permits.

Total 1985 trip-related expenditures for Great Lakes fishing by anglers 16 years old and older were \$818 million, or 52 percent of the \$1.6 billion spent for Great Lakes fishing. Food and lodging on Great Lakes fishing trips accounted for \$331 million, transportation for \$203 million, and other trip costs for \$284 million. Expenditures for equipment purchased primarily for Great Lakes fishing totaled \$708 million, or 45 percent of all expenditures for Great Lakes fishing. By category of equipment, these expenditures were \$143 million for fishing equipment, \$15 million for auxiliary equipment (tents, backpacking gear, etc.), and \$550 million for special equipment (vans, boats, etc.). Other Great Lakes fishing expenditures were \$31 million. A total of \$4 million was spent for magazine subscriptions, membership dues or contributions, and to own or lease land for the primary purpose of Great Lakes fishing. The remaining \$27 million were spent for licenses, stamps, tags and permits.

Saltwater Fishing Highlights

Some 13.7 million Americans aged 16 and older went fishing in saltwater in 1985. Saltwater anglers, 30 percent of all who fished, accounted for 136.4 million fishing trips and 155.2 million days of fishing.

Total expenditures for fishing in saltwater in 1985 were \$7.2 billion. Trip-related expenditures included \$1.5 billion for food and lodging on saltwater fishing trips, \$799 million for transportation, and \$1.5 billion for other trip costs, such as guide fees or equipment rental. Altogether, trip-related expenditures totaled \$3.8 billion, or 52 percent of saltwater fishing expenditures. Total equipment expenditures for saltwater fishing were \$3.3 billion, or 45 percent of saltwater fishing expenditures. By category of equipment, expenditures were \$562 million for fishing equipment, \$76

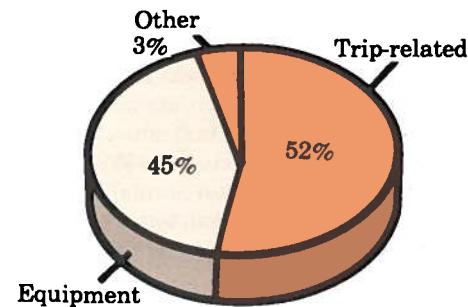

million for auxiliary equipment (tents, backpacking gear, etc.), and \$2.6 billion for special equipment used primarily for saltwater fishing (boats, vans, etc.). Remaining expenditures for saltwater fishing included \$14.8 million for magazine subscriptions and membership dues or contributions, \$130 million to own or lease land primarily for saltwater fishing, and \$25 million for licenses, stamps, tags and permits.

Comparative Fishing Highlights

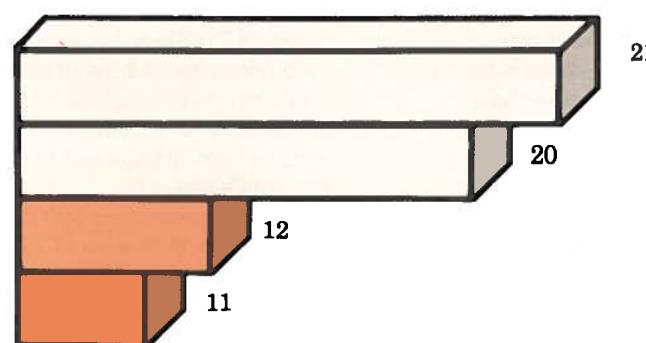

The average fisherman 16 years old or older fished 21 days in the U.S. in 1985. Those who fished in freshwater that was not the Great Lakes spent an average of 20 days on these waters in 1985. The average number of fishing days for Great Lakes fishermen was 12 days, while saltwater fishermen averaged 11 days of saltwater fishing. Those who fished in freshwater except the Great Lakes took an average of 18 non-Great Lakes freshwater fishing trips. On average, 11 trips were taken to the Great Lakes by Great Lakes fishermen, and saltwater fishermen took an average of 10 saltwater fishing trips.

The average fisherman spent \$607 for fishing in 1985. By type of fishing, expenditures per fisherman ranged from \$414 per year for Great Lakes fishing to \$528 per year for saltwater fishing. Expenditures for non-Great Lakes freshwater fishing averaged \$463 per fisherman in 1985. Average expenditures per day of Great Lakes fishing were \$34, while average daily expenditures for fishing in freshwater excluding the Great Lakes were \$23. Consistent with the higher annual saltwater expenditures, saltwater anglers spent \$47 per saltwater fishing day.

Sex and Age of Fishermen

Substantial percentages of men and women 16 years old and older fished in 1985. Among men, 37 percent participated in fishing activities.

Among women, 16 percent fished. Of the total of 46.4 million fishermen, 68 percent (31.4 million) were men and 32 percent (15.0 million) were women.

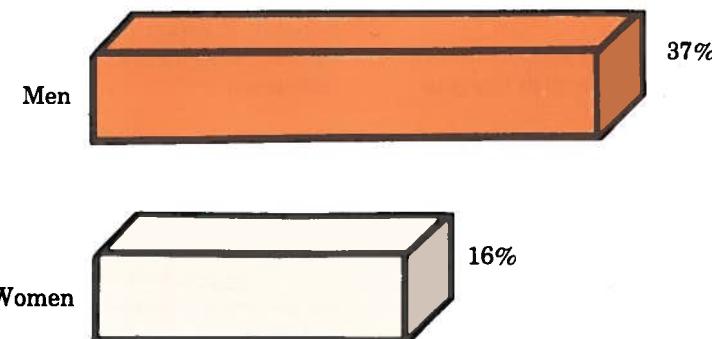

For those in the 16 to 17 year old age group, the fishing participation rate was 31 percent. This age group contributed 2.4 million anglers, 5 percent of all fishermen. The population 18-24 years old had a participation rate of 27 percent. The 6.8 million persons in this age group who went fishing accounted for 15 percent of all fishermen 16 years old and older. Among those 25-44 years old, 31 percent went fishing in 1985. In addition, those 25-44 years old comprised 40 percent of the U.S. population 16 years old and older in 1985, so that this age group contributed 22.9 million fishermen, almost half of all fishermen. Among those 45-64 years old, 23 percent participated in fishing. This age group accounted for 10.7 million fishermen, or 23 percent of the total. Among those 65 years old and older, 13 percent went fishing in 1985. There were 3.7 million fishermen in this age category, or 8 percent of those who fished in 1985.

Size of Residence of Fishermen

In 1985, members of the population 16 years old and older were most likely to have fished if they lived in sparsely populated areas. Nevertheless, 14.4 million fishermen, 31 percent of the total, lived in standard metropolitan statistical areas (SMSA's) with a population of 1,000,000 or more. The participation rate for persons living in these largest SMSA's was 20 percent. In medium SMSA's with a population of 250,000-999,999, about 25 percent of the population went fishing in 1985. These areas contributed 9.7 million fishermen, 21 percent of all fishermen. In the smallest SMSA's, those with a population of 50,000-249,999, the 1985 fishing participation rate was 27 percent. There were 3.9 million fishermen who lived in these small SMSA's, 8 percent of the total number

of fishermen. The populations of non-SMSA's, where 33 percent of the population fished, contributed 18.3 million fishermen, or 40 percent of all fishermen.

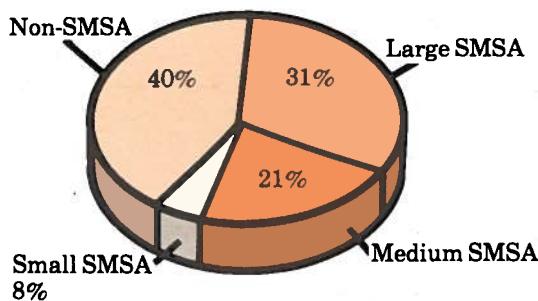

Income of Fishermen

In 1985, fishermen 16 years old and older represented all income groups in the U.S. population. Participation rates ranged from 17 percent for those living in households with annual incomes of less than \$10,000 to 31 percent for those living in households with incomes between \$30,000 and \$49,999. About 24 percent of those living in households with incomes of \$10,000-\$19,999 participated in fishing. The participation rate for members of households with annual incomes of \$20,000-\$24,999 was 28 percent. The rate at which members of households with annual incomes of \$50,000 or

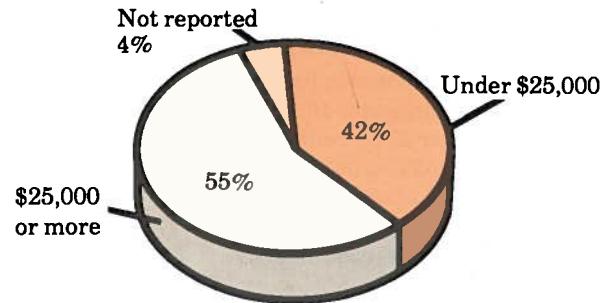

more participated in fishing was 27 percent. In households with 1985 incomes of \$25,000-\$29,999 the participation rate was 29 percent. Among the 5 percent of survey respondents who did not report their household income, 18 percent went fishing in 1985.

In 1985 the median income of U.S. households was about \$25,000, with half of the households having incomes of less than \$25,000 and the remaining half having household incomes of \$25,000 or more. Less than half of all fishermen, 42 percent, were members of households with annual incomes under \$25,000, while 55 percent belonged to households with annual incomes of \$25,000 or more. About 4 percent of all fishermen lived in households that did not report their 1985 incomes.

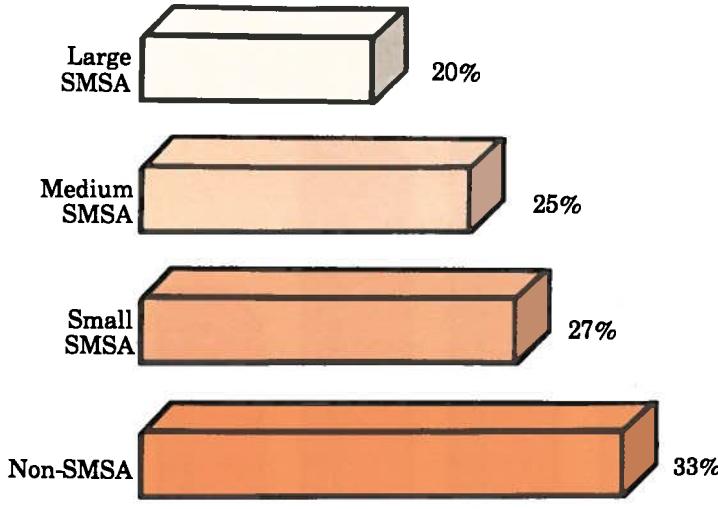

Percent of Fishermen 16 and Older

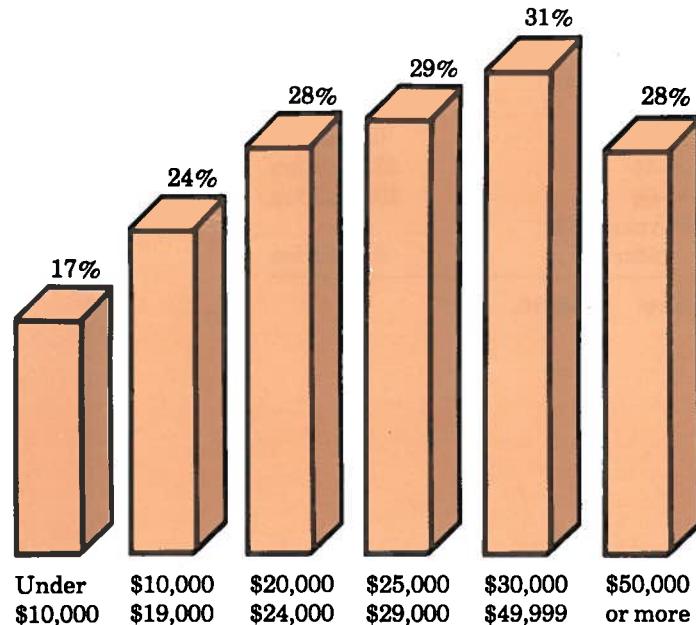

Percent of Fishermen 16 and Older

Percent of Population 16 and Older Who Fished

Percent of Population 16 and Older

Education and Race of Fishermen

Among the population 16 years old and older, at least 20 percent of the individuals in each educational group fished in 1985, with slightly higher participation rates associated with higher educational levels. The lowest participation rate 23 percent occurred in the group without a high school diploma. Roughly 10.4 million fishermen, or 22 percent of all fishermen, had 0-11 years of education. The participation rate for those who had attained a high school diploma was 25 percent. This educational group included 17.7 million fishermen, or 38 percent of all fishermen. In the group with an educational attainment of 1-3 years of college, 28 percent went

fishing in 1985. This group's 9.5 million anglers constituted 20 percent of all fishermen. The remaining 19 percent of the total, 8.9 million fishermen, had completed a college diploma or advanced degree. In the educational group of persons with 4 or more years of college, 27 percent went fishing in 1985.

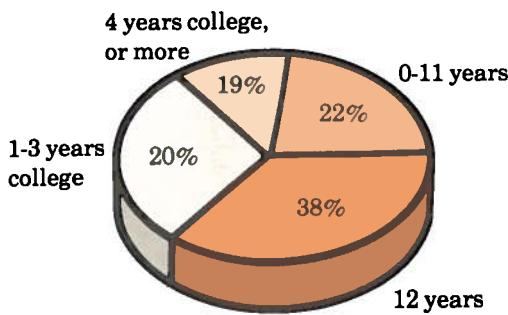

In 1985, participation rates for the population 16 years old and older varied by race. Among whites, 27 percent fished, compared with 13 percent of blacks and 18 percent of people of all other races. Of the total number of fishermen, 92 percent (42.8 million) were white, 5 percent (2.4 million) were black, and 2 percent (1.1 million) were of other races.

Fishermen

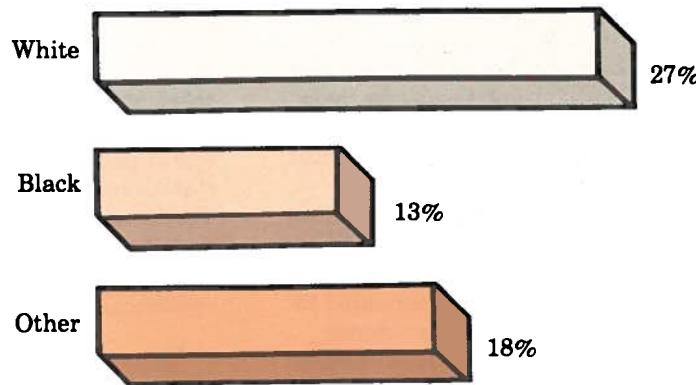

Total fishermen	46.4 million

Fishing for Selected Fish

Of the 38.4 million fishermen 16 years old and older who fished in freshwater excluding the Great Lakes, 16.2 million fished for black bass (largemouth, smallmouth, etc.) on 342.6 million angling days. Panfish in these freshwaters accounted for 264.5 million angling days by 14.2 million fishermen. In non-Great Lakes freshwater, over 14 million anglers fished for catfish and bullheads during 284.5 million fishing days, and 11.7 million anglers spent 229.8 million days fishing for crappie. Trout fishing drew 11.3 million anglers and 159.3 million angling days. Other freshwater species that were commonly sought outside the Great Lakes included walleye, sauger, northern pike and pickerel.

Perch were popular with Great Lakes anglers, attracting 1.5 million fishermen. Over 20 million days were spent fishing the Great Lakes for perch. Salmon and steelhead were also popular, drawing 1.4 million and 555 thousand Great Lakes anglers respectively. Walleye and sauger drew 1.2 million Great Lakes fishermen who spent 17 million days fishing for them in 1985. Lake trout and bass were also sought by significant numbers of Great Lakes fishermen.

Among saltwater species, the survey covered only major anadromous fish sought by saltwater anglers in the marine environment. An estimated 13 percent (1.8 million) of all saltwater fishermen sought striped bass in 1985, and 7 percent (946 thousand) fished for salmon in the marine environment. Saltwater fishermen spent 17.6 million days fishing for striped bass, and 6.9 million days fishing for salmon in saltwater.

Fishing in State of Residence and in Other States

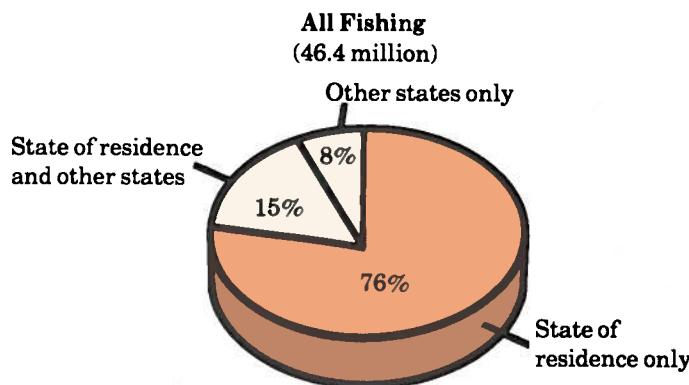

While many fishermen 16 years old and older did fish outside their state of residence in 1985, the typical angler went fishing only in his or her state of residence. Of the total 46.4 million Americans who fished in the U.S., 76 percent fished only in their state of residence, 8 percent fished only in other states, and 15 percent fished in other states in addition to their own. Among the 38.4 million who fished in

Type of fishing	Fishermen (millions)	Days (millions)
Freshwater, Except Great Lakes		
Black bass	16.2	342.6
Panfish	14.2	264.5
Catfish	14.0	284.5
Crappie	11.7	229.8
Trout	11.3	159.3
Walleye/sauger	4.1	79.5
Northern pike/pickerel	3.5	69.5
Great Lakes

Striped bass	1.8	17.6
Salmon	0.9	6.9

Sources: Tables 6, 7, and 8.

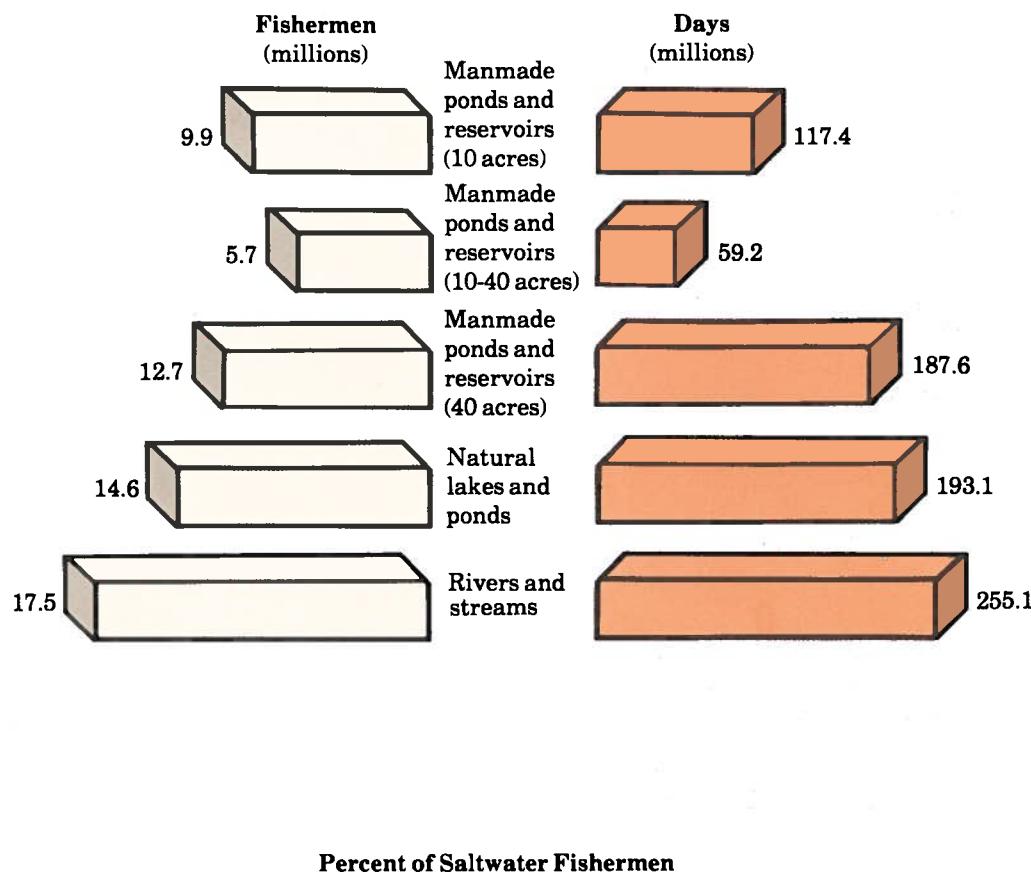

freshwater excluding the Great Lakes, 80 percent fished only in their state of residence, 8 percent fished only in waters outside their state of residence, and 12 percent fished in both their state of residence and in other states. The 3.8 million Great Lakes fishermen included 77 percent whose only Great Lakes fishing was in their state of residence, 5 percent who fished in the

Great Lakes in their state of residence and other states, and 16 percent whose only Great Lakes fishing was outside their state of residence. While 70 percent of saltwater anglers fished only in their state of residence, 24 percent fished only outside their state of residence and 5 percent fished in saltwater both in their state of residence and in other states.

Types of Freshwater Fished

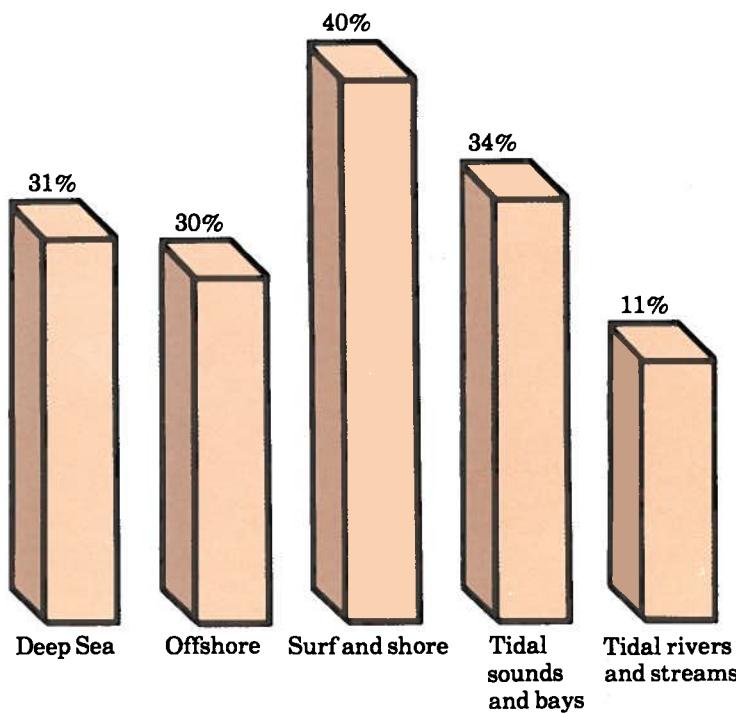

The 38.4 million freshwater fishermen 16 years old and older who fished in freshwater that was not the Great Lakes made use of a variety of types of fresh water in 1985, including manmade ponds and reservoirs, natural lakes and ponds, and rivers and streams. Manmade ponds and reservoirs of less than 10 acres were fished by 9.9 million fishermen, 26 percent of the total, who spent 117.4 million days fishing in these small bodies of water. Manmade ponds or reservoirs of 10 to 40 acres attracted 5.7 million fishermen, 15 percent of those who fished freshwater outside the Great Lakes. Fishing in these waters accounted for 59.2 million days of fishing. About 12.7 million fishermen (33 percent) spent 187.6 million days fishing in manmade ponds or reservoirs of 40 acres or more. Non-Great Lakes natural lakes and ponds drew 14.6 million fishermen (38 percent) who spent 193.1 million days fishing in these waters. Rivers and streams were fished by 17.5 million anglers (45 percent) who spent 255.1 million days fishing in these flowing waters in 1985.

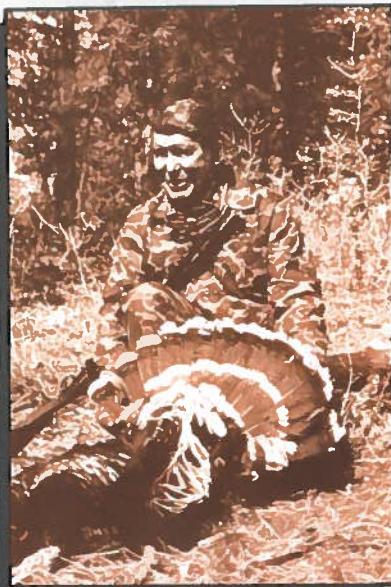

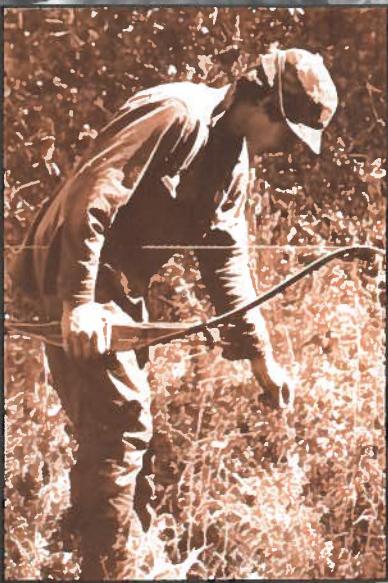

Types of Saltwater Fished

Saltwater fishing by those 16 years old and older was classified into five categories. The 13.7 million Americans who fished in the coastal waters of the U.S. in 1985 included 4.3 million, 31 percent, who did some deep sea fishing (more than 3 miles off shore). The 4.1 million anglers, who fished offshore (between 0.2 and 3 miles off shore), were 30 percent of saltwater anglers. Surf and shore anglers, the largest group, numbered almost 5.5 million, 40 percent of the total. Another 4.7 million saltwater fishermen, 34 percent of the total, fished in saltwater sounds and bays. Tidal rivers and streams provided saltwater fishing spots for 1.6 million saltwater anglers, 11 percent of the total.

Percent of Saltwater Fishermen

Hunting

Hunting Highlights

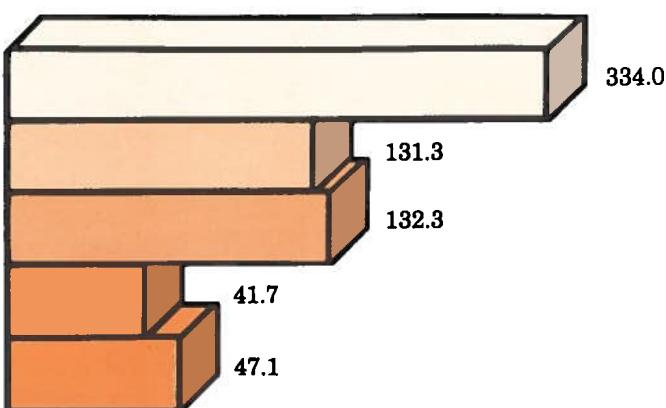

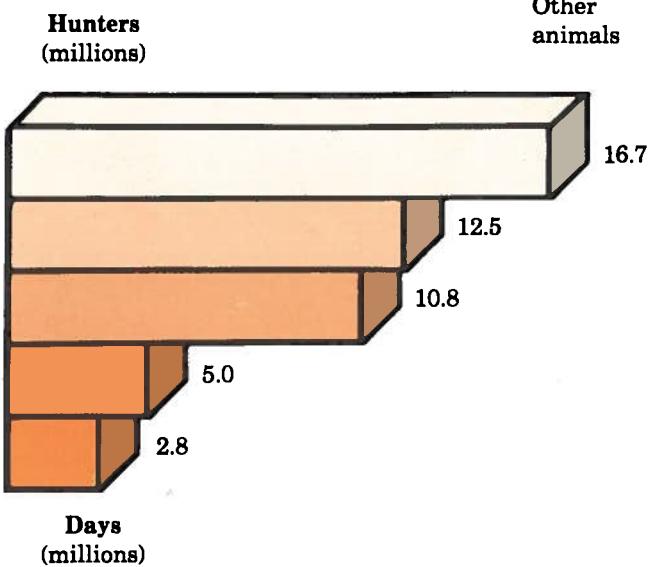

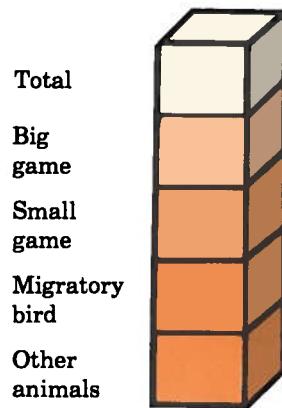

Nearly 16.7 million Americans 16 years old and older hunted in 1985. These hunters, 9 percent of the population 16 and older, took 314.2 million hunting trips in 1985, totaling 334.0 million days of hunting. Over 12.5 million hunters took 106.4 million trips to hunt big game. These trips involved 131.3 million days of big game hunting. The 10.8 million individuals who hunted small game in 1985 took 123.5 million hunting trips and spent 132.3 million days in the field.

Migratory bird hunting drew 5.0 million hunters who took 38.5 million trips and spent 41.7 million days hunting migratory birds. Hunting for other animals accounted for 2.8 million hunters, 45.9 million hunting trips, and 47.1 million days of hunting.

Total expenditures for hunting in 1985 were \$10.1 billion. Big game

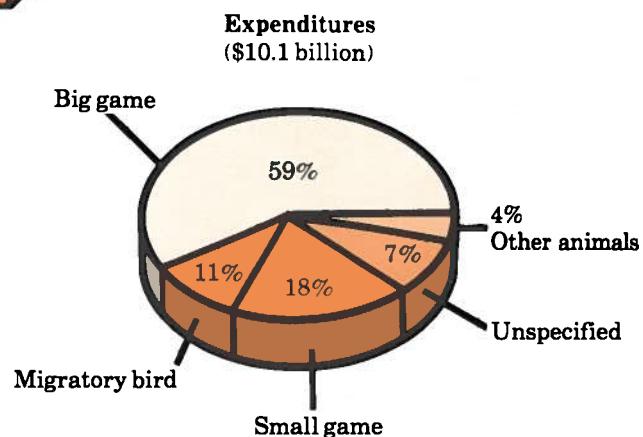

expenditures of \$6.0 billion accounted for 59 percent of the total.

Expenditures for small game hunting, \$1.8 billion, were 18 percent of the total, migratory bird hunting expenditures of \$1.1 billion were 11 percent of the total, and expenditures of \$356 million for hunting other animals accounted for 4 percent of all hunting expenditures. Hunters responding to the survey did not allocate the remaining \$832 million of hunting expenditures to any particular type of hunting.

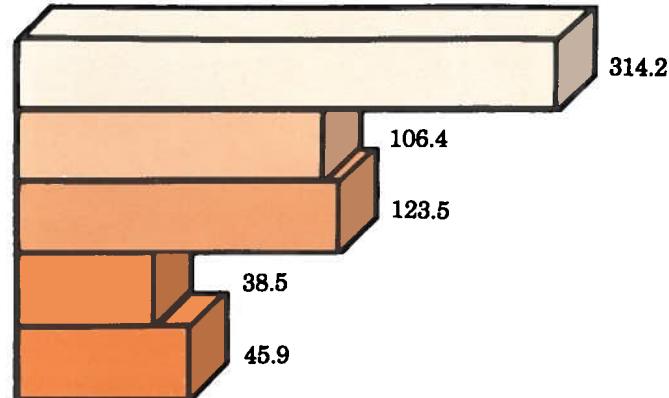

Hunting	
Hunters	16.7 million
Big game	12.5 million
Small game	10.8 million
Migratory bird	5.0 million

Trips (millions)

Hunting Expenditures

Of the total \$10.1 billion spent for hunting in 1985 by Americans 16 years old and older, \$1.9 billion (19 percent) was spent for food and lodging on hunting trips. Transportation accounted for \$1.6 billion (16 percent) and other trip costs, such as guide fees or equipment rental, accounted for \$218 million (2 percent). Total trip-related hunting expenditures were \$3.7 billion, or 37 percent of all hunting expenditures.

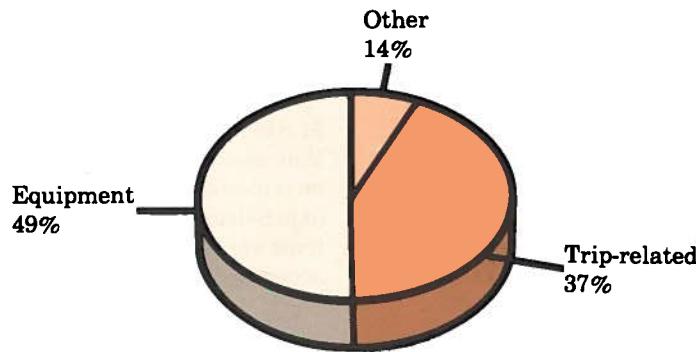

Americans 16 years old and older who hunted in 1985 spent \$4.9 billion for equipment, 49 percent of all hunting expenditures. Within the general category of equipment, hunters' expenditures were \$2.8 billion (27 percent) for hunting equipment, \$688 million (7 percent) for auxiliary equipment (tents, backpacking gear, etc.), and \$1.5 billion (15 percent) for special equipment used primarily for hunting (vans, campers, etc.).

Other 1985 expenditures by hunters included magazine subscriptions and membership dues or contributions of \$65 million (1 percent), \$911 million (9 percent) to own or lease land for hunting, and \$435 million (4 percent) for licenses, stamps, tags, and permits.

Hunting Expenditures

Total hunting expenditures	\$ 10,059 million
Total trip-related	\$ 3,714 million
Food and lodging	\$ 1,884 million
Transportation	\$ 1,613 million
Other trip costs	\$ 218 million
Total equipment expenditures	\$ 4,934 million
Hunting equipment	\$ 2,750 million
Auxiliary equipment	\$ 688 million
Special equipment	\$ 1,495 million
Total other hunting expenditures	\$ 1,412 million

Hunting Expenditures

\$10.1 billion

Big Game Hunting

Deer, elk, and other big game species were hunted by 12.5 million hunters aged 16 and over in 1985. Big game hunters took 106.4 million hunting trips and hunted big game on 131.3 million days.

Total expenditures for big game hunting in 1985 were \$6.0 billion. Food and lodging on big game hunting trips accounted for \$1.1 billion.

Transportation accounted for \$813 million, and other trip costs, such as guide fees or equipment rental, were \$134 million. Altogether, trip-related expenditures totaled \$2.1 billion, or 34 percent of big game hunting expenditures.

About \$2.8 billion, 47 percent of expenditures for big game hunting, were spent for equipment used primarily for big game hunting. By category of equipment, \$1.2 billion were spent for hunting equipment, \$457 million for auxiliary equipment (tents, backpacking gear, etc.), and \$1.1 billion for special equipment (vans, campers, etc.). Other expenditures for big game hunting included \$25 million

for magazine subscriptions and membership dues or contributions, \$755 million for land owned or leased for big game hunting, and \$300 million for licenses, stamps, tags, and permits.

Small Game Hunting

An estimated 10.8 million hunters 16 years old and older sought small game in 1985. They took 123.5 million hunting trips and spent 132.3 million days in the field pursuing their sport.

Small game hunters spent a total of \$1.8 billion in 1985. About 51 percent of that amount, \$924 million, was spent on trip-related items. Food and lodging expenditures on small game hunting trips were \$431 million. Transportation accounted for \$453 million. Other trip

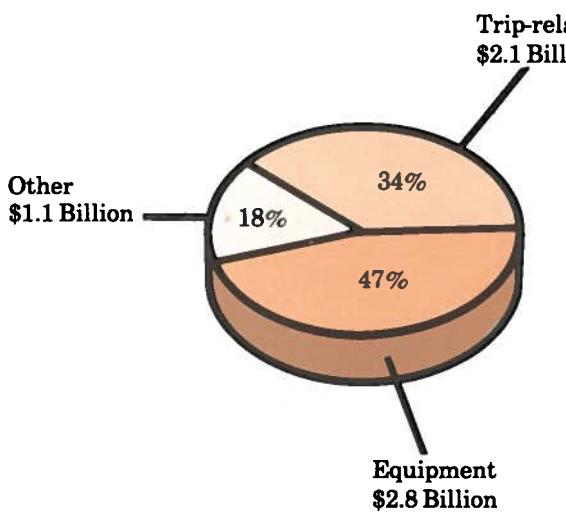

costs, such as guide fees or equipment rental, were \$39 million.

Small game hunters spent \$749 million, 41 percent of small game hunting expenditures, for equipment purchased primarily for small game hunting. By equipment category, \$553 million were spent for hunting equipment, \$66 million for auxiliary equipment (tents, backpacking gear, etc.), and \$130 million for special equipment (vans, campers, etc.). Other expenditures for small game hunting included \$7 million for magazine subscriptions and membership dues or contributions, \$73 million to own or lease land for small game hunting, and \$62 million for licenses, stamps, tags, and permits.

Migratory Bird Hunting

Waterfowl, doves and other migratory birds were hunted in 1985 by 5.0 million hunters 16 years old and older. These hunters took 38.5 million migratory bird hunting trips and hunted migratory birds on 41.7 million days.

Total expenditures for migratory bird hunting in 1985 were \$1.1 billion. Food and lodging on migratory bird hunting trips accounted for \$272 million. Transportation accounted for \$217 million, and other trip costs, such as guide fees or equipment rental, for \$37 million. Total trip-related expenditures were \$526 million, or 48 percent of migratory bird hunting expenditures.

Migratory bird hunters spent \$402 million, 37 percent of migratory bird hunting expenditures, for equipment used primarily for migratory bird hunting. By equipment category, \$263 million were spent for hunting equipment, \$60 million for auxiliary equipment (tents, backpacking gear, etc.), and \$80 million for special equipment (vans, campers, etc.). Other expenditures for migratory bird hunting included \$17 million for magazine subscriptions and

membership dues or contributions, \$80 million to own or lease land for migratory bird hunting, and \$63 million for licenses, stamps, tags, and permits.

Hunting Other Animals

Other animals, including coyote, crows, fox, raccoon and woodchuck, were hunted in 1985 by 2.8 million hunters 16 years old and older. While taking 45.9 million hunting trips, these hunters accounted for 47.1 million days of hunting for other animals.

Hunters of other animals spent a total of \$356 million in 1985. Of that amount, \$209 million (59 percent) were spent on trip-related items. Food and lodging on trips to hunt other animals accounted for \$73 million.

Transportation accounted for \$129 million, and other trip costs, such as guide fees or equipment rental, were \$7 million.

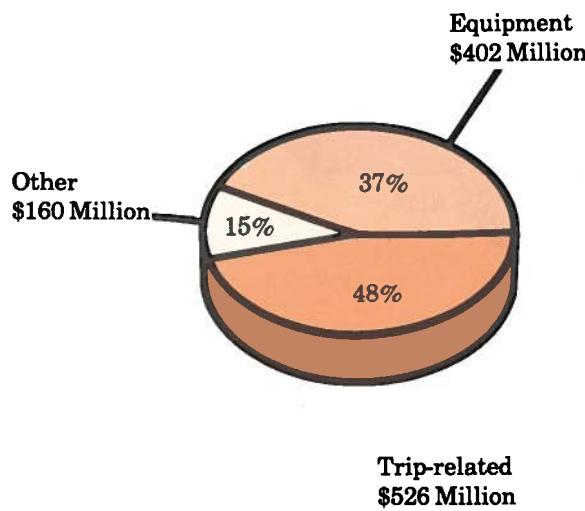

Hunters of other animals spent \$141 million (40 percent) for equipment used primarily for hunting other animals. By equipment category, \$106 million were spent for hunting equipment, \$8 million for auxiliary equipment (tents, backpacking gear, etc.), and \$28 million for special equipment (vans, campers, etc.).

Other expenditures for hunting other animals totaled \$4.7 million. A total of \$1.2 million was spent for magazine subscriptions, membership dues or contributions, and expenditures to own or lease land for hunting other animals. The remaining \$3.5 million were spent for licenses, stamps, tags and permits.

Comparative Hunting Highlights

Trips, days of effort, and expenditures by hunters 16 years old and older varied by the type of game hunted in 1985. Big game hunters took an average of 9 big game hunting trips in 1985, compared with an average of 11 trips taken by small game hunters and 8 trips taken by migratory bird hunters. Hunters of other animals took an average of 16 trips to hunt other animals.

Days of hunting followed the pattern of hunting trips. Big game hunters spent an average of 10 days hunting big game in 1985, while small game hunters averaged 12 days. Migratory bird hunters spent an average of 8 days per year pursuing their sport. Hunting other animals attracted a relatively small number of avid hunters who devoted an average of 17 days per year to their sport.

Expenditures per hunter per year in 1985 ranged from \$476 for big game

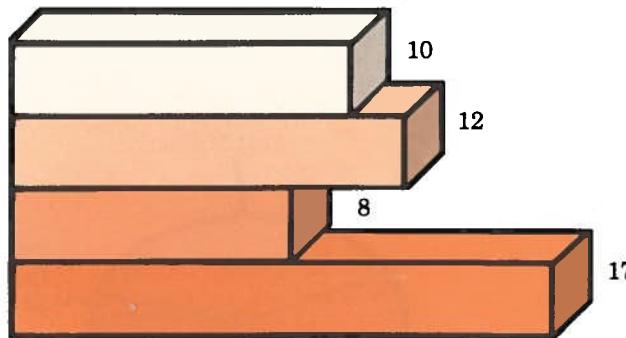

hunting to \$125 for hunting other animals. On average, small game expenditures were \$168 and migratory bird expenditures were \$216 per hunter per year. On a daily basis, average expenditures per hunter ranged from \$45 per day for big game hunting to \$8 for hunting other animals. Average daily expenditures were \$26 for migratory bird hunting, and \$14 for small game hunting in 1985.

Days per Hunter

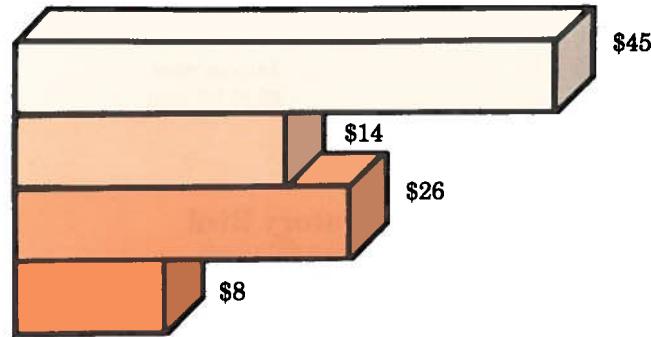

Expenditures per Hunter

Trips per Hunter

Expenditures per Day

Sex and Age of Hunters

About 18 percent of men 16 years old and older hunted in 1985, compared with 2 percent of women. Of the total 16.7 million hunters, 15.2 million, 91 percent, were men. The 1.5 million female hunters comprised 9 percent of all hunters.

The 1985 hunting participation rate among those 16 or 17 years old was 14 percent. This age group included 1.1 million hunters, or 6 percent of all hunters. The population 18 through 24 years old had a participation rate of 11 percent. About 2.9 million persons in this age group went hunting, accounting for 17 percent of the total number of hunters. The participation

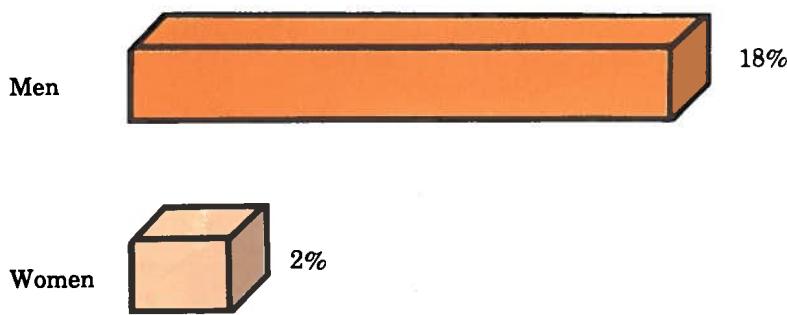

rate for those between the ages of 25 and 44 was 11 percent in 1985. This age group, which comprised over 40 percent of the U.S. population 16 years old and older, contributed 8.2 million hunters, or 49 percent of all hunters. Of the population between the ages of 45 and 64, 8 percent hunted in 1985. This age group accounted for 3.7 million hunters, or 22 percent of those who hunted. Within the oldest age group, those 65 and older, 3 percent hunted. These 897 thousand hunters were 5 percent of all hunters in 1985.

Size of Residence of Hunters

Participation in hunting was most popular in the least populated areas in 1985. Even though many American hunters 16 years old and older lived in standard metropolitan statistical areas (SMSA's), the majority who hunted in 1985, 53 percent, lived outside these metropolitan areas. Nearly 16 percent of the individuals in this non-SMSA population went hunting in 1985, accounting for 8.8 million of the 16.7 million hunters.

Within the SMSA's, the lowest participation rate in hunting, 5 percent, was in those SMSA's with a population of 1,000,000 or more. Nonetheless, these areas contributed 3.3 million hunters, 20 percent of all hunters. There were 3.1 million hunters, 19 percent of all hunters, who

lived in SMSA's with populations of 250,000-999,999. About 8 percent of the population living in these areas went hunting in 1985. The population of the smallest SMSA's (population size 50,000-249,999) had a hunting participation rate of 10 percent in 1985. These small SMSA's contributed 1.5 million hunters, or 9 percent of the total.

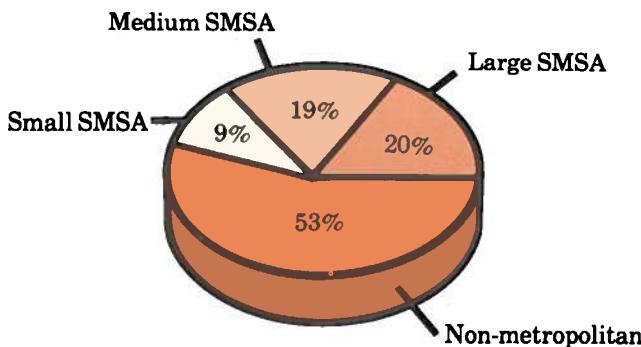

hunting in 1985. Household income was not reported by 5 percent of the survey respondents. Within this group, 6 percent hunted, accounting for 3 percent of total hunters.

In 1985 the median income of U.S. households was about \$25,000, with half of the households having incomes of less than \$25,000 and the other half having incomes of \$25,000 or more. For hunters, 43 percent came from households with annual incomes less than \$25,000, while 54 percent came from households with annual incomes \$25,000 or more. The remaining 3 percent of hunters lived in households that did not report their incomes.

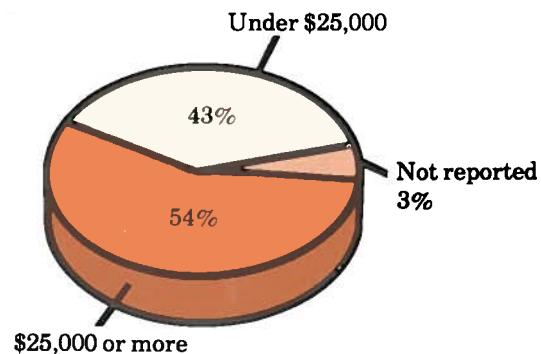

Income of Hunters

In 1985, hunters 16 years old and older represented all income groups in the U.S. population. The highest participation rate, 11 percent, was in households with annual incomes between \$20,000-\$24,999 and in households with incomes between \$30,000-\$49,999. About 6 percent of the population living in households with annual incomes under \$10,000 went

Percent of Population 16 Years Old and Older

Percent of Population 16 Years Old and Older Who Hunted

Education and Race of Hunters

Among Americans 16 years old and older, at least 8 percent of each educational group hunted in 1985. The highest participation rate, 10 percent was among those with 12 years of education. This group included 6.8 million hunters, which was 41 percent of all hunters. Within the group of persons who had not completed a high school diploma, the participation rate for hunting was 9 percent. Roughly 4.1 million hunters, or 25 percent of all hunters, had completed fewer than 12 years of education. The remaining 34 percent of those who hunted in 1985 had completed one or more years of education after high school. Among those with 1-3 years of college, 9 percent hunted in 1985. This educational group contributed 3.2

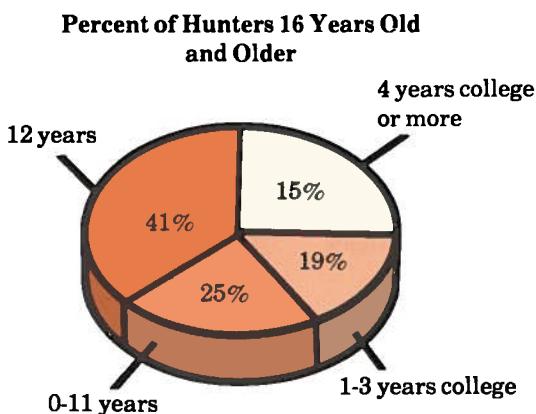

million hunters, or 19 percent of all hunters. Approximately 8 percent of persons with 4 or more years of college hunted in 1985. This educational group included 2.5 million hunters, accounting for 15 percent of all hunters.

About 9 percent of the population 16 years old and older went hunting in 1985. White participation rates were higher than those of any other race. About 10 percent of whites, 2 percent of blacks, and 3 percent of individuals of other races hunted in 1985. As a result, the hunting population included 16.0 million whites, 457 thousand blacks, and 213 thousand hunters of other races. In percentage terms, 96 percent of hunters were white, 3 percent were black, and 1 percent were of other races.

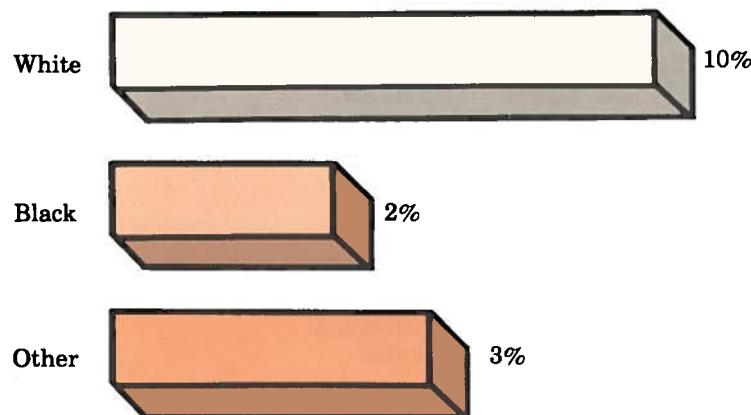

Hunters

Total hunters	16.7 million
Education	
0-11 years	4.1 million
12 years	6.8 million

Percent of Hunters 16 Years Old and Older

Hunting for Selected Game

The table on this page highlights the animals and birds which were most commonly hunted in 1985. Nearly 12.0 million hunters 16 years of age and older spent 119 million days hunting deer. Wild turkey and elk were hunted by 1.9 million and 776 thousand respectively. Bear drew smaller, yet substantial, numbers of big game hunters.

More than half of the 10.8 million small game hunters hunted for rabbits and hares in 1985. These 6.5 million hunters spent over 69.4 million days hunting rabbits and hares. Squirrels were hunted by 5.8 million small game hunters, and 3.7 million hunted pheasants. Quail attracted nearly 3.2 million hunters and 2.2 million hunters sought grouse and prairie chicken.

Nearly 3.1 million hunters spent over 19.3 million days hunting doves. Ducks were hunted by 50 percent (2.5 million) of all migratory bird hunters in 1985, and 29 percent (1.5 million) hunted geese. Migratory bird hunters spent 22.3 million days in the field hunting ducks, and 13.1 million days hunting geese.

About 1.0 million hunters went raccoon hunting in 1985, and 971 thousand hunted woodchuck. There were 773 thousand coyote hunters and 514 thousand hunters who hunted foxes in 1985.

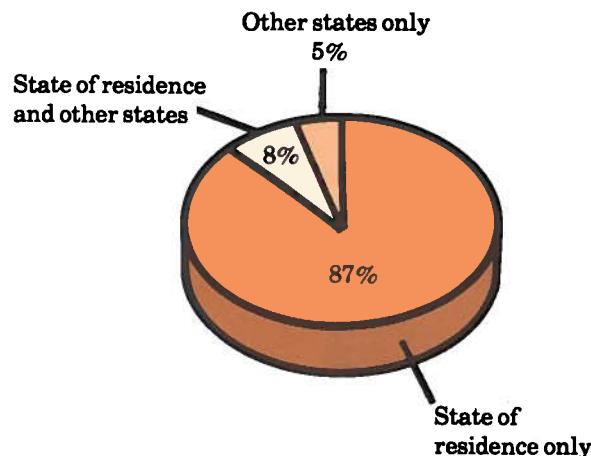

Hunting In State of Residence and in Other States

Most of the hunters 16 years of age and older who hunted in the U.S. in 1985 hunted in their state of residence, regardless of the type of game being hunted. Only 5 percent did all of their hunting outside of their state of residence. The largest group of hunters, 87 percent, hunted in their state of residence but not in any other state. The remaining 8 percent of the hunting population hunted in their state of residence and at least one other state.

Type of hunting	Hunters (millions)	Days (millions)
Big game	12.5	131.3
Deer	12.0	118.8
Wild turkey	1.9	14.9
Elk	0.8	5.3
Bear	0.5	4.4
Small game	10.8	132.3
Rabbits and hares	6.5	69.4
Squirrels	5.8	61.1
Pheasant	3.7	30.3

Coyote	0.8	10.0
Foxes	0.5	7.6

Sources: Tables 10, 11, 12, and 13.

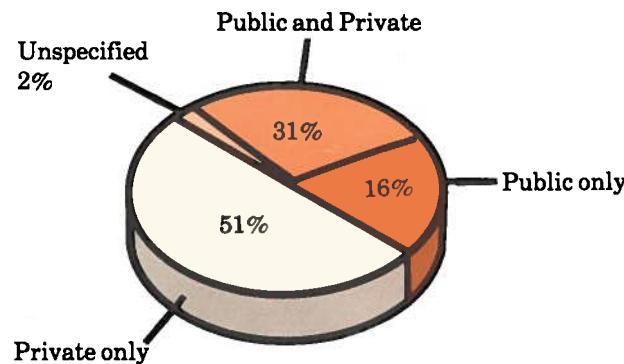

Percent of Hunters 16 Years Old and Older

Hunting on Public and Private Lands

About 31 percent of the 16.7 million hunters 16 years old and older, 5.2 million hunters, hunted on both public and private lands in 1985. In addition, 2.6 million individuals, 16 percent of all who hunted in 1985, hunted exclusively on publicly owned lands. The largest group of hunters was the 8.5 million hunters, 51 percent of the total, who hunted on privately owned lands but not on public lands. The remaining 2 percent of the hunters in the survey did not indicate the ownership of the land where they hunted. Nearly 7.9 million hunters, 47 percent of the hunting population, hunted on publicly owned lands, and over 13.7 million hunters, 82 percent of the total, hunted on private lands in 1985.

Percent of Hunters 16 Years Old and Older

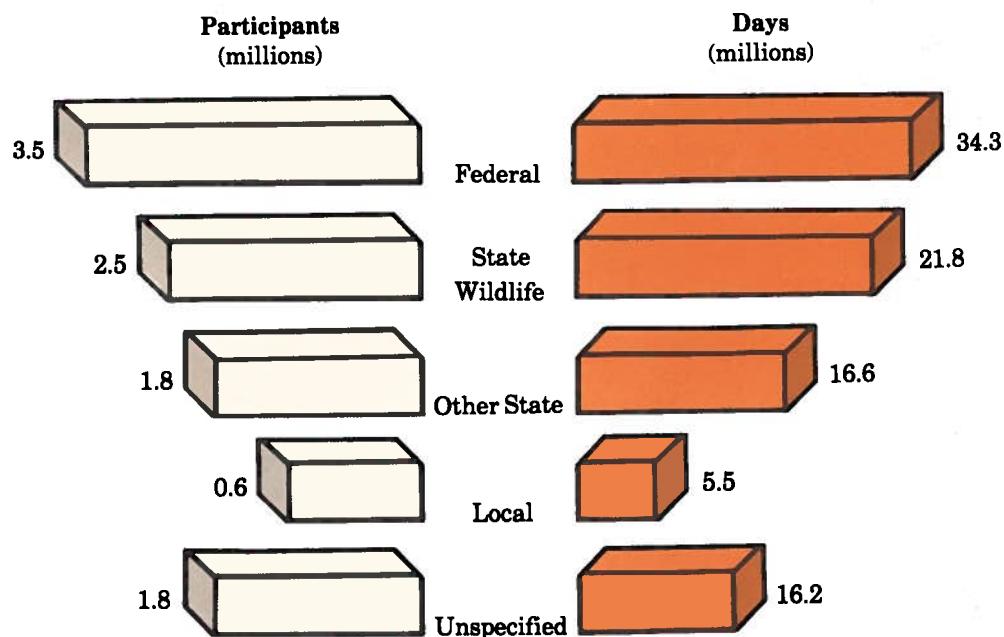

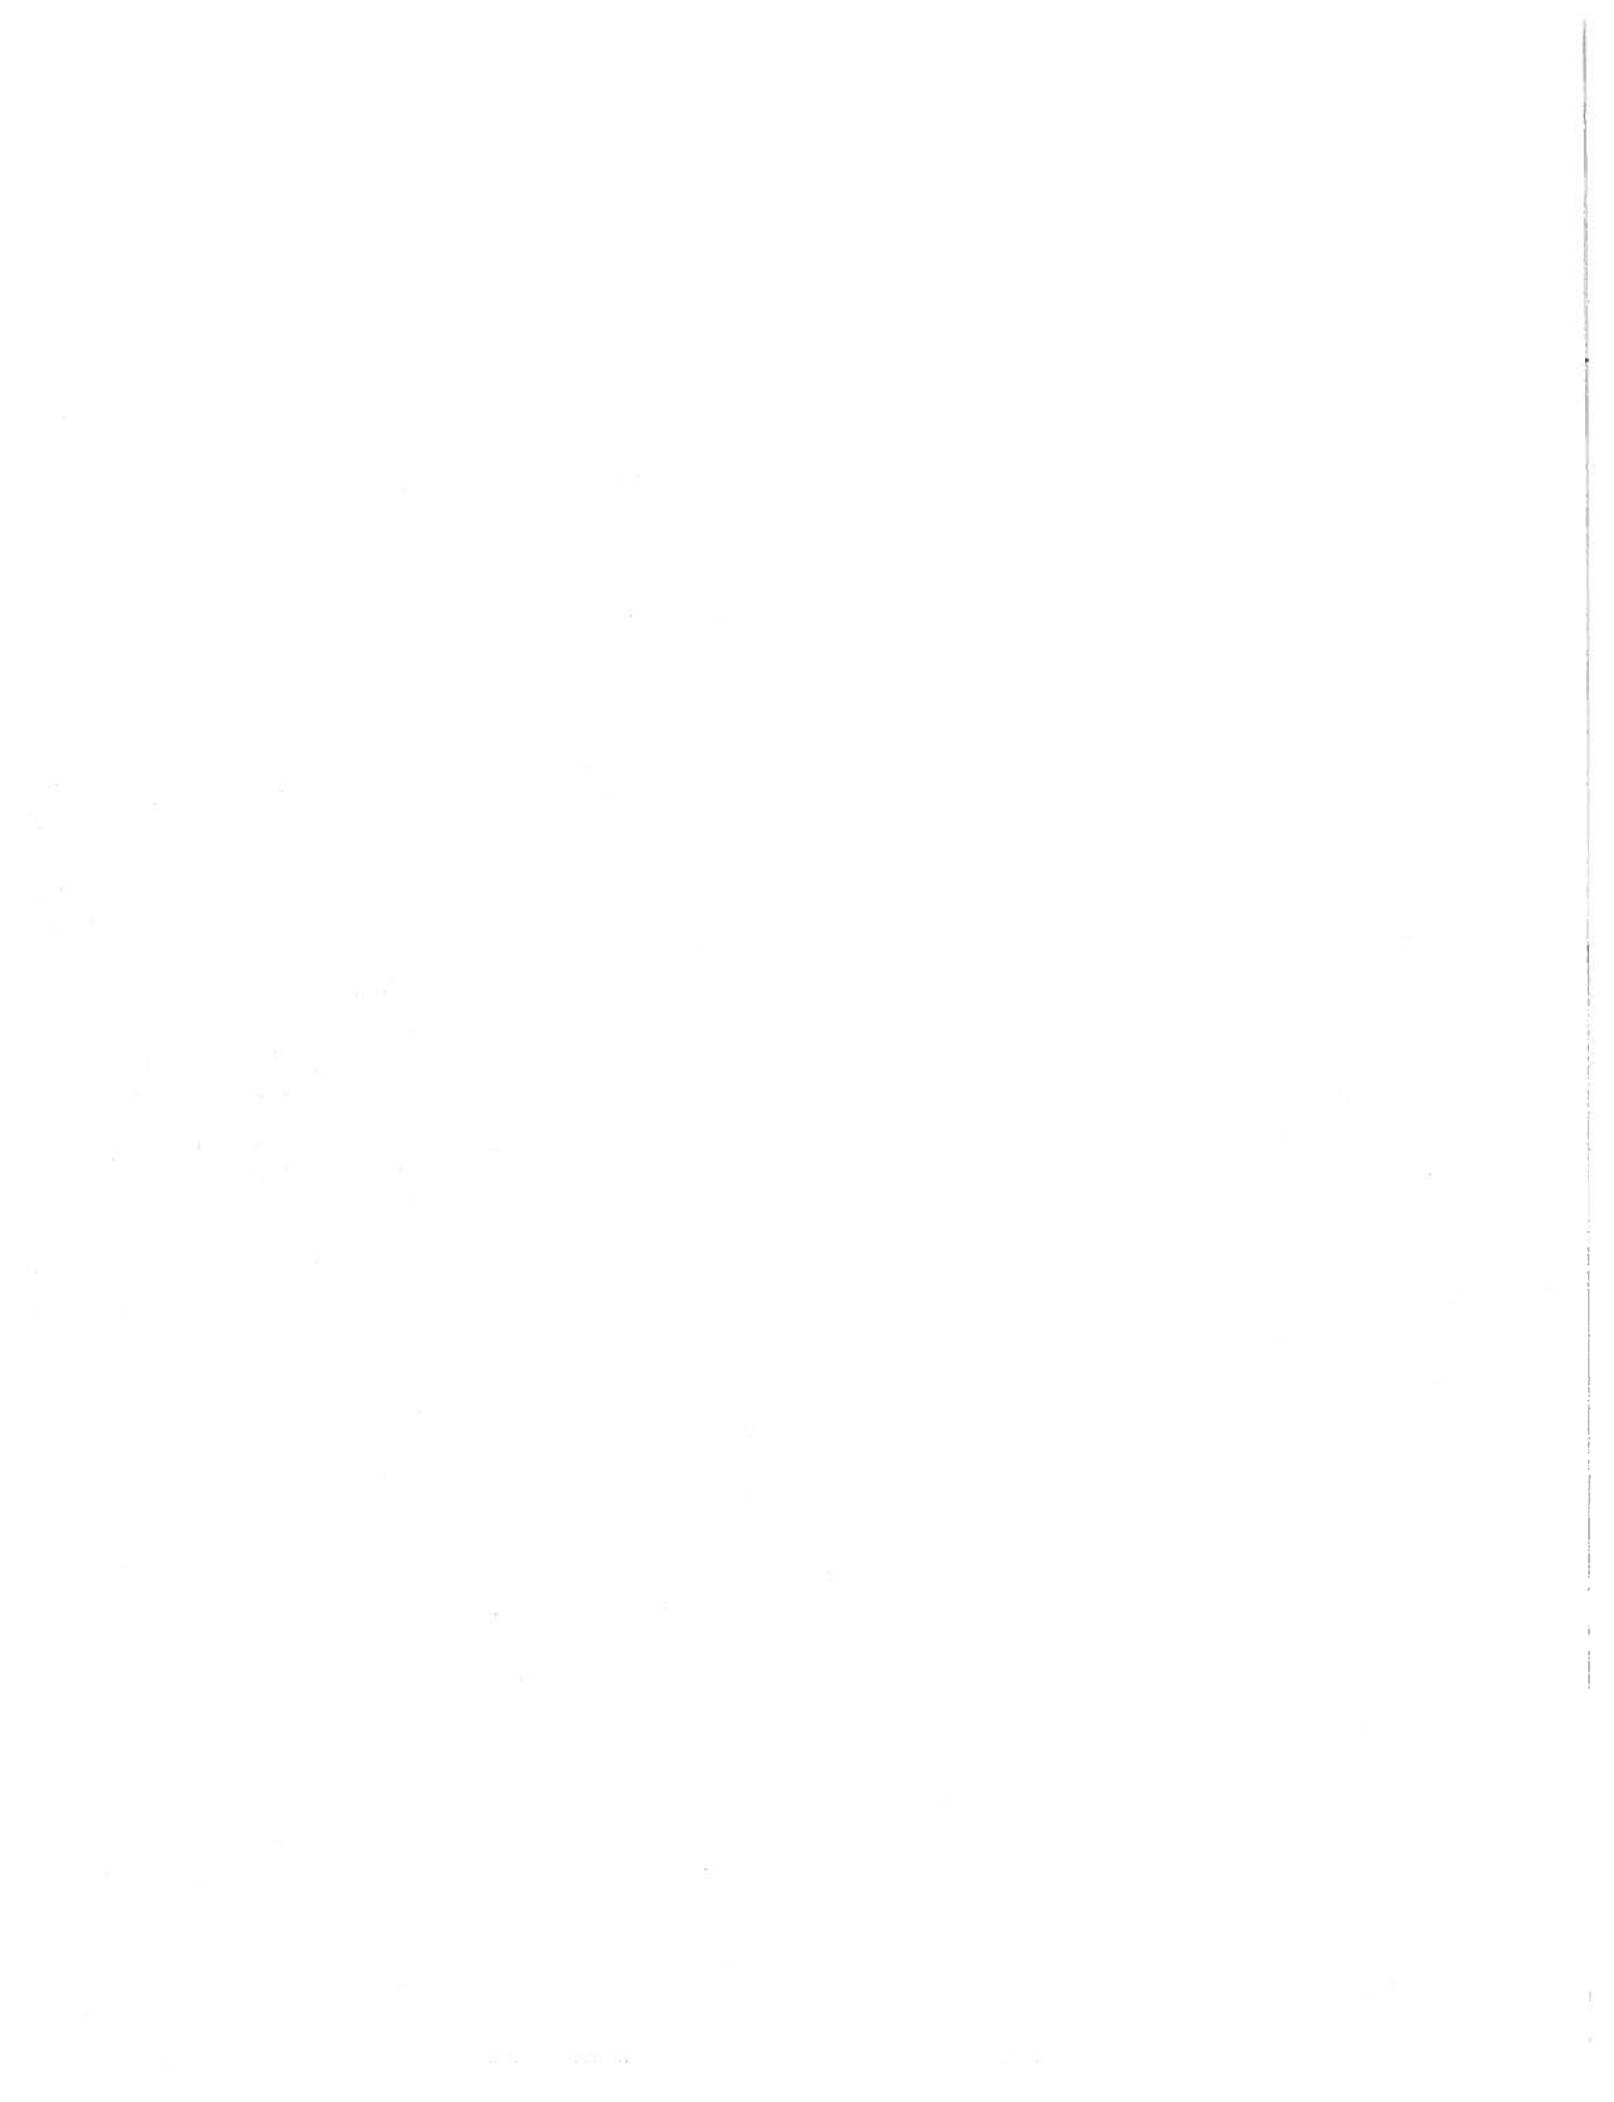

Hunting on Public Lands

Of the 16.7 million hunters 16 years old and older, the 7.9 million who hunted on public lands spent nearly 94.4 million hunting days on public lands in 1985. These 94.4 million hunting days (which included days that were spent on both public and private lands) were 28 percent of the total 334.0 million hunting days.

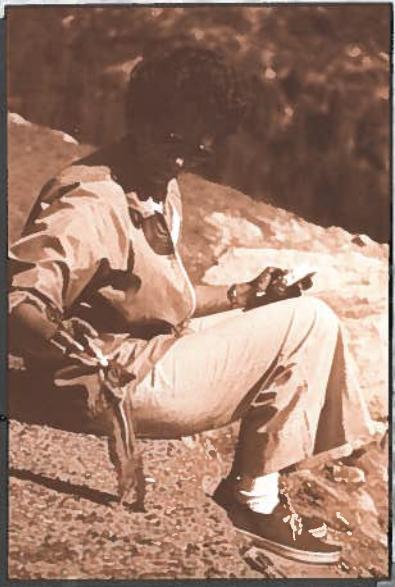

Of the total 16.7 million hunters, about 21 percent hunted on Federally owned areas. State wildlife areas attracted 15 percent of all hunters, while 11 percent hunted on other state areas. Locally owned public lands drew 4 percent of all hunters in 1985. About 11 percent of the hunters in the survey hunted on public land but did not specify which government owned the public land they used for hunting.

Hunting on Federally owned areas accounted for 10 percent of the total 334.0 million hunting days in 1985. Days spent hunting on state wildlife areas accounted for 7 percent of the total hunting days, with other state areas accounting for 5 percent of the total. About 2 percent of all hunting days were spent on locally owned public lands. The remaining days of hunting on public lands, 5 percent of all hunting days, were spent on public lands being used by hunters who did not specify which government owned the land.

Nonconsumptive Wildlife Use

Participation in Nonconsumptive Activities

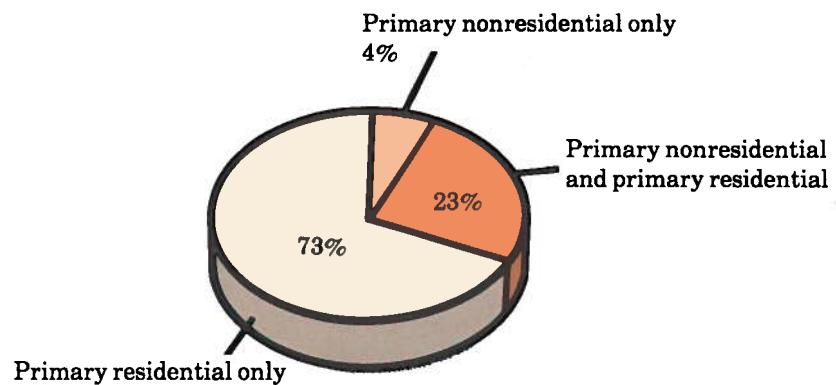

A total of 134.7 million Americans 16 years old and older participated in nonconsumptive wildlife-related recreation in the U.S. in 1985. These participants included 109.6 million, 61 percent of the population, for whom nonconsumptive wildlife-related recreation was the primary purpose of an activity (primary nonconsumptive). A second group that involved many of the same individuals was the 127.4 million participants, 70 percent of the population, who enjoyed wildlife while engaged in activities with another primary purpose (secondary nonconsumptive).

Primary nonconsumptive participants included two groups. The first group was the 29.3 million individuals, 16 percent of the population, who took trips primarily to observe, photograph, or feed wildlife (primary nonresidential). Many of these individuals were among those in the second group - the 105.3 million individuals, 58 percent of the population, who showed an active interest in wildlife around the home (primary residential).

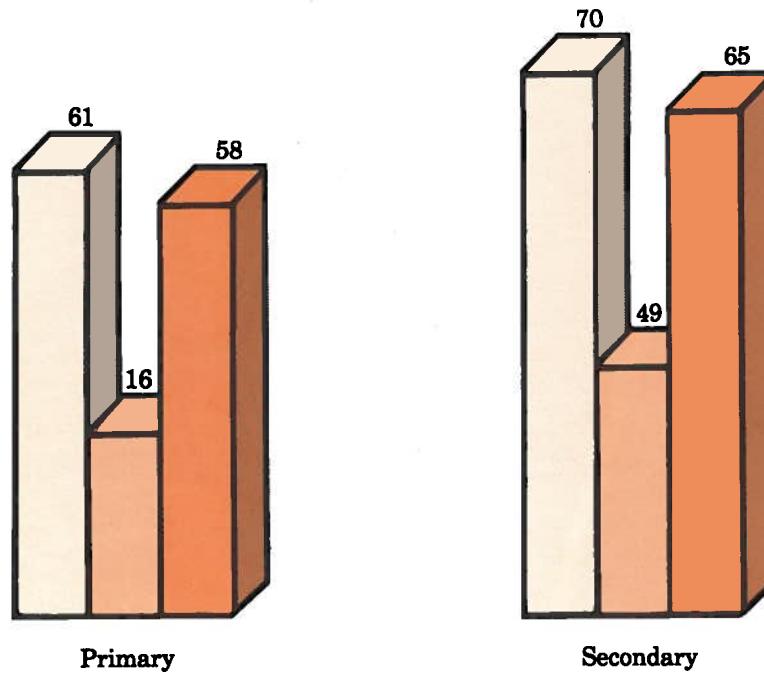

Among the 127.4 million secondary participants, there were 89.5 million Americans, 49 percent of the population, who enjoyed wildlife while on trips taken for another purpose (secondary nonresidential). The largest group of secondary participants included the 117.4 million persons, 65 percent of the population, who enjoyed wildlife while engaged in other activities around the home (secondary residential).

Focusing on the 109.6 million primary nonconsumptive participants, the survey found that 73 percent were involved in primary residential activities only. Nearly one in four, 23 percent, reported both primary residential and nonresidential activities. The remaining 4 percent observed, photographed, or fed wildlife only when they took wildlife-related trips of one mile or more away from their home.

Percent of Participants 16 Years Old and Older

Percent of Population 16 Years Old and Older Who Participated

Nonconsumptive Expenditures

The 1985 expenditures by nonconsumptive participants 16 years old and older totaled \$14.3 billion, an average of \$106 per participant. This total includes \$4.4 billion of trip-related expenditures for primary nonresidential activities, and \$9.8 billion for equipment and other expenditures of primary and secondary participants. As a group, the 64 million participants who had nonconsumptive expenditures in 1985, 48 percent of all nonconsumptive participants, spent an average of \$221.

About 41 percent of primary and secondary nonconsumptive participants purchased equipment or magazines, paid membership dues, or made contributions in 1985 primarily for use in observing, photographing, or feeding fish or wildlife. Those who made these equipment and other purchases spent an average of \$177.

Altogether, their equipment expenditures totaled \$9.8 billion, 66 percent of total nonconsumptive expenditures in 1985. Within this equipment category, \$3.6 billion were spent for nonconsumptive equipment (field guides, birdseed, binoculars, etc.), \$507 million were spent for auxiliary equipment (tents, backpacking gear, etc.), and \$5.2 billion were spent for special equipment (travel or tent trailer, vans, etc.) in 1985.

Other expenditures primarily for nonconsumptive activities included magazine subscriptions of \$230 million and membership dues or contributions of \$250 million.

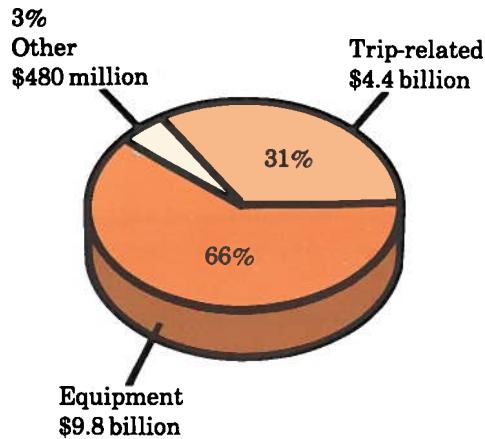

or feed wildlife spent \$4.4 billion on trip-related items, an average of \$170 per spender and \$151 per participant. Trip-related expenditures for primary nonresidential activities accounted for 31 percent of the total spent by nonconsumptive participants.

Expenditures by primary nonresidential participants for food accounted for \$1.8 billion, 40 percent of the total spent on trip-related items. Their lodging expenditures were \$750 million, 17 percent of total trip costs. Transportation expenditures for primary nonresidential activities were \$1.7 billion, 38 percent of total trip costs. The remaining 5 percent of primary nonresidential trip costs, \$229 million, were spent for such things as guide fees and equipment rental.

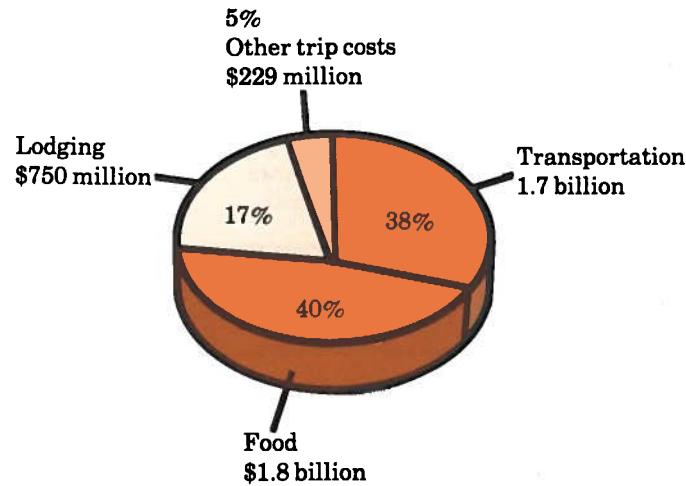

Trip-Related Expenditures by Primary Nonresidential Participants

About 89 percent of the 29.3 million persons 16 years old and older who took trips primarily to observe, photograph,

Total Nonconsumptive Expenditures
\$14.3 Billion

Trip-Related Expenditures
\$4.4 Billion

Primary Nonresidential Activities

Over 29.3 million Americans 16 years old and older participated in primary nonresidential activities in the U.S. in 1985. The most common activity during wildlife-related trips, observing wildlife, involved 29.1 million individuals, 99 percent of the primary nonresidential group. Wildlife photographers numbered 13.6 million, or 46 percent of primary nonresidential participants. Nearly 13.1 million persons - 45 percent of primary nonresidential participants - fed wildlife while on their primary purpose trips.

Primary nonresidential participants spent 338.5 million days observing, photographing, or feeding wildlife during their primary purpose trips. Since many individuals

participated in two or all three of these activities on the same day, the 338.5 million total days of primary nonresidential activity included 309.8 million days of wildlife observation, 80.3 million days of wildlife photography, and 92.8 million days during which wildlife was fed. In percentage terms, wildlife was observed on 92 percent, photographed on 24 percent, and fed on 27 percent of the total primary nonresidential days.

Nearly 88 percent of primary nonresidential participants took primary purpose trips within their state of residence. These individuals included many whose primary purpose trips were only in their state of residence (74 percent), those who took trips both in their state of residence and to another state (14 percent), and those whose trips were taken only to another state (12 percent). Altogether,

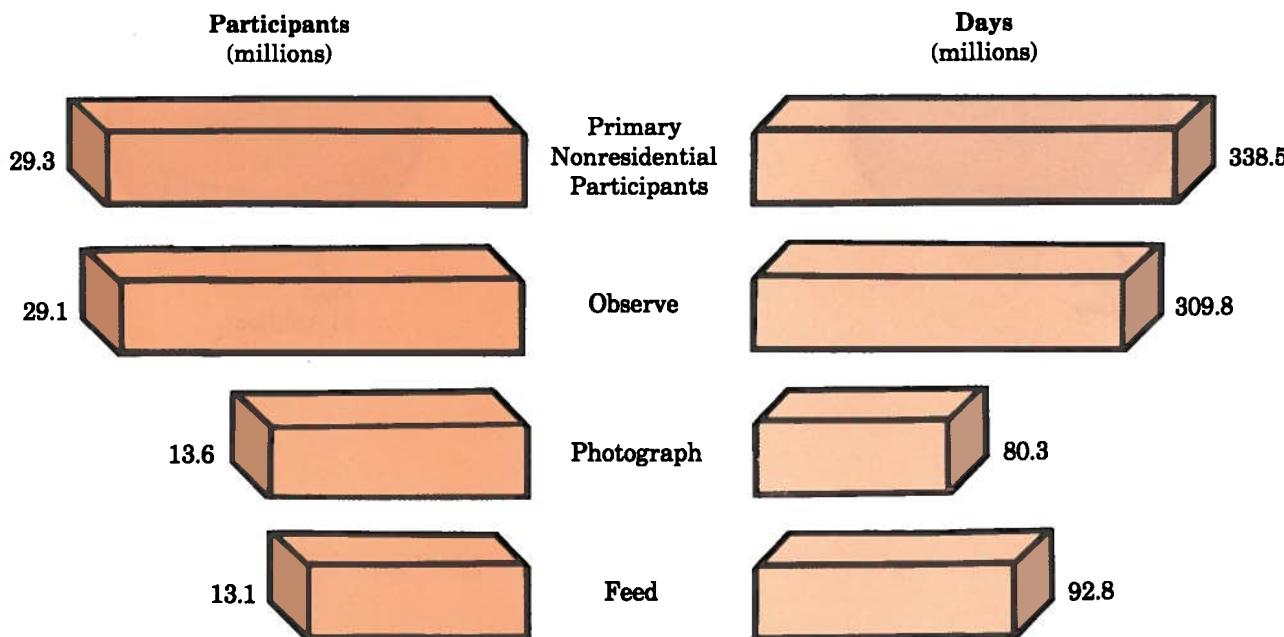

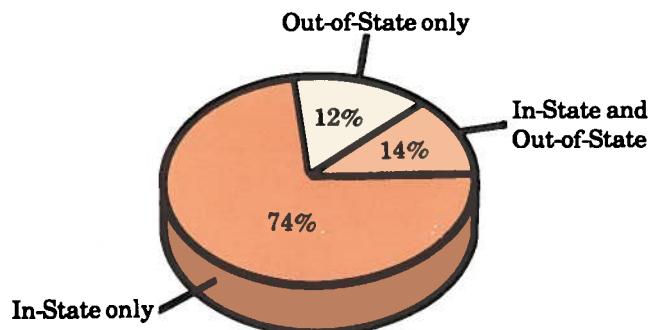

26 percent of primary nonresidential participants took at least some of their trips to other states.

Primary Nonresidential

Participants, total	29.3 million
Observers	29.1 million
Photographers	13.6 million
Feeders	13.1 million
Days, total	338.5 million
Observing	309.8 million
Photographing	80.3 million
Feeding	92.8 million

Source: Table 59.

Percent of Primary Nonresidential Participants 16 Years Old and Older

Sex and Age of Primary Nonresidential Participants

Almost equal numbers of men and women 16 years old and older participated in primary nonresidential activities in the U.S. in 1985. Among men, 17 percent took trips primarily to observe, photograph, or feed wildlife, as did 16 percent of all women. However, the majority of participants, 51 percent, were women. Of the total 29.3 million participants, 14.9 million were women, and 14.4 million were men.

The participation rate in primary nonresidential activities by those in the 16 to 17 year old age group was 17 percent. This age group's 1.3 million participants made up 4 percent of the total. The 18-24 year old population had a similar 17 percent participation

rate. About 4.2 million persons in this age group, 14 percent of the total, took trips where enjoyment of wildlife was the primary focus. The participation rate for those between the ages of 25 and 44 was 22 percent in 1985.

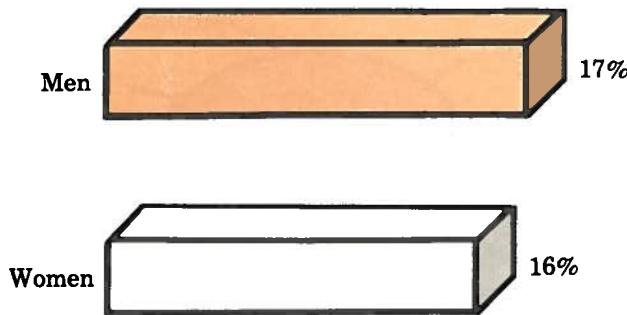

However, 56 percent of all primary nonresidential participants, 16.4 million individuals, were 25-44 years old because this age group is such a large percentage of the population. Of the population in the 45-64 age group, 12 percent participated. These 5.6 million participants were 19 percent of all primary nonresidential participants. The remaining 1.8 million participants were 65 years old and older. In this age group, about 6 percent took trips where wildlife was the primary focus.

Primary Nonresidential Participants

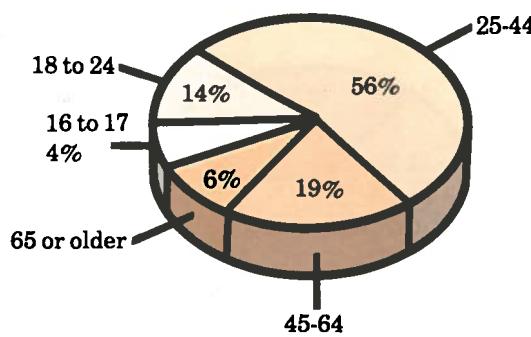

Total, both sexes	29.3 million
Male	14.4 million
Female	14.9 million
Total, all ages	29.3 million
16-17	1.3 million
18-24	4.2 million
25-44	16.4 million
45-64	5.6 million
65 years and older	1.8 million

Percent of Population 16 Years Old and Older Who Participated

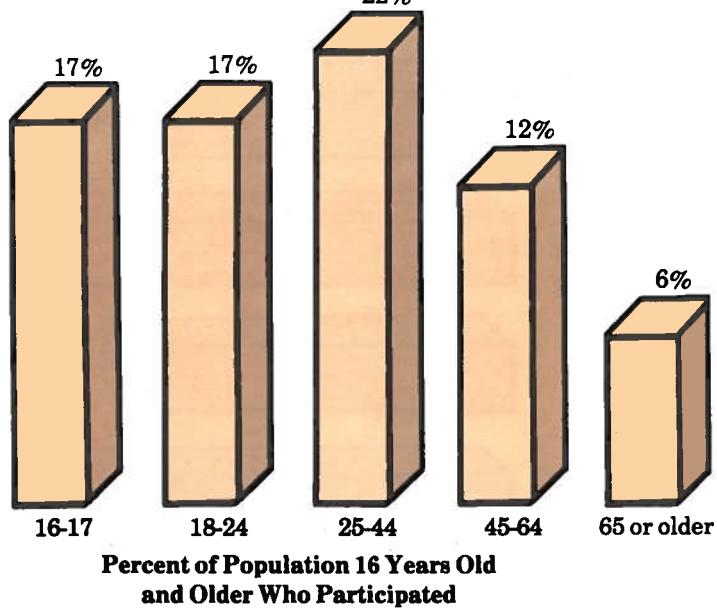

Percent of Primary Nonresidential Participants 16 Years Old and Older

Percent of Primary Nonresidential Participants 16 Years Old and Older

Percent of Population 16 Years Old and Older Who Participated

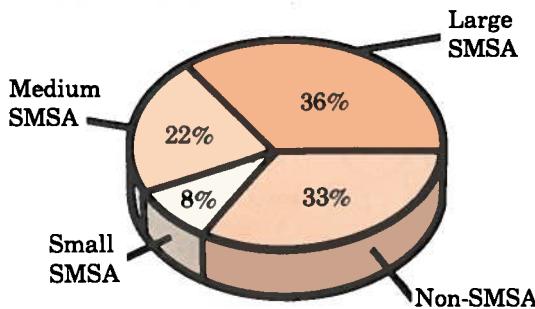

Size of Residence of Primary Nonresidential Participants

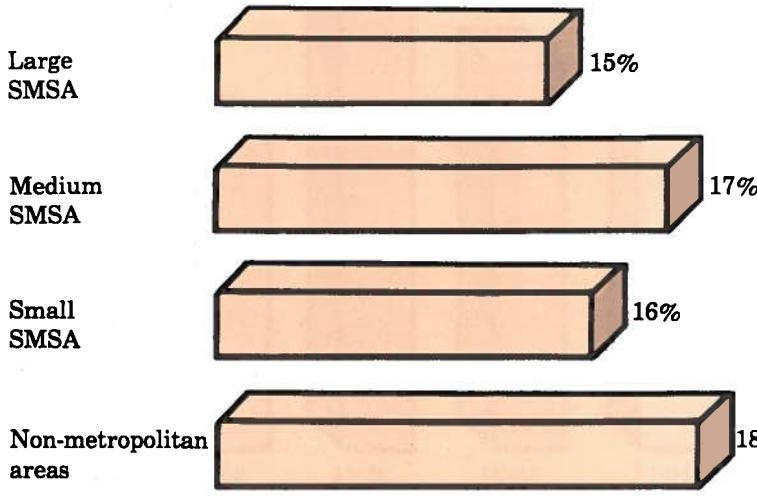

The 1985 rates of participation in primary nonresidential activities by those 16 years old and older were similar for residents of densely and sparsely populated areas. About 15 percent of those living in standard metropolitan statistical areas (SMSA's) with a population of 1,000,000 or more took trips primarily to observe, photograph, or feed wildlife. These areas contributed 10.7 million participants, 36 percent of all primary nonresidential participants. There were 6.6 million participants, 22 percent of the total, who lived in SMSA's with populations of 250,000-999,999. About 17 percent of the population living in these areas took wildlife-related trips in 1985. Residents of the smallest SMSA's, those with a population of 50,000-249,999, participated at the rate of 16 percent.

About 2.3 million participants, 8 percent of the total, lived in small SMSA's. There were 9.8 million participants who lived in non-SMSA areas, where 18 percent of the population participated in primary nonresidential activities. About one third of all primary nonresidential participants lived outside SMSA's.

Percent of Primary Nonresidential Participants 16 Years Old and Older

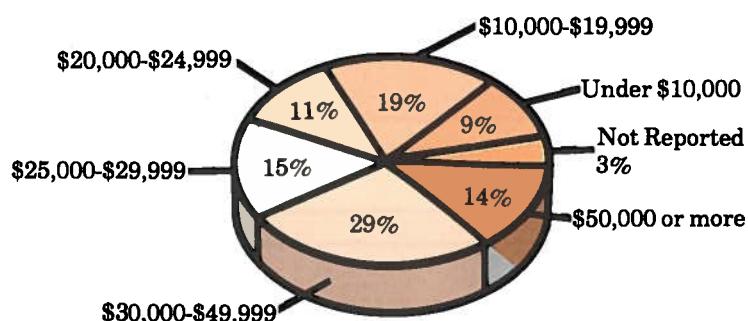

Percent of Population 16 Years Old and Older Who Participated

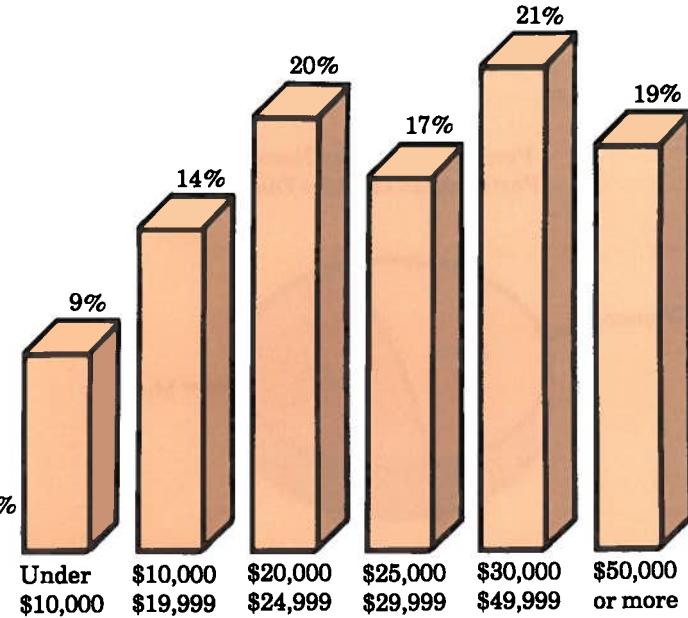

individuals in households with 1985 annual incomes of \$30,000-\$49,999 were primary nonresidential participants. Household income was not reported for 5 percent of the individuals in the survey. Within this group, the participation rate was 10 percent.

In 1985, the median income of U.S. households was about \$25,000, with half of the households having incomes of less than \$25,000 and the remaining half having household incomes of \$25,000 or more. Most primary nonresidential participants, 58 percent, lived in households with 1985 incomes of \$25,000 or more. Another 39 percent came from households with 1985 incomes less than \$25,000. The remaining 3 percent of primary nonresidential participants lived in households that did not report their incomes.

Percent of Primary Nonresidential Participants 16 Years Old and Older

Percent of Population 16 Years Old and Older Who Participated

Education and Race of Primary Nonresidential Participants

In 1985, the percentage of those 16 years old and older who were primary nonresidential participants rose sharply with years of education completed. For persons without a high school diploma, the participation rate was 9 percent. Roughly 3.9 million participants, or 13 percent of those who took trips primarily to observe, photograph, or feed wildlife, had 0-11 years of education. The participation rate for persons with a high school education was 14 percent. About 9.8 million participants, 33 percent of all primary nonresidential participants, had a high school diploma. Nearly 22 percent of the people with 1-3 years of college enjoyed wildlife while on

primary purpose trips. This group contributed 7.4 million participants, 25 percent of the total. There were 8.2 million participants, 28 percent of the total, who had a college diploma or advanced degrees in 1985. Among those with 4 or more years of college, 25 percent participated in primary nonresidential activities.

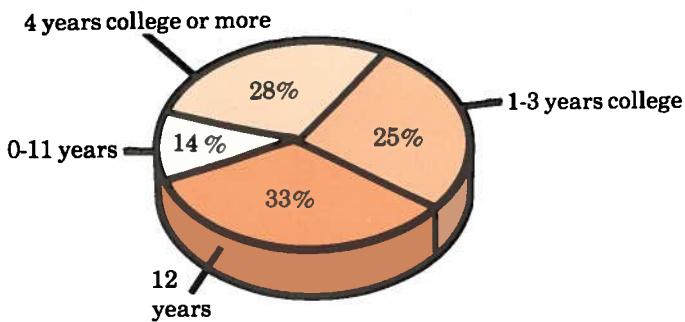

In 1985, most primary nonresidential participants 16 years old and older were white. Participation rates were 18 percent for whites, 4 percent for blacks, and 7 percent for individuals of other races. Of the total number of persons who took trips primarily to observe, photograph, or feed wildlife, 96 percent (28.1 million) were white, 3 percent (810 thousand) were black, and 2 percent (472 thousand) were of other races.

Primary Nonresidential Participants

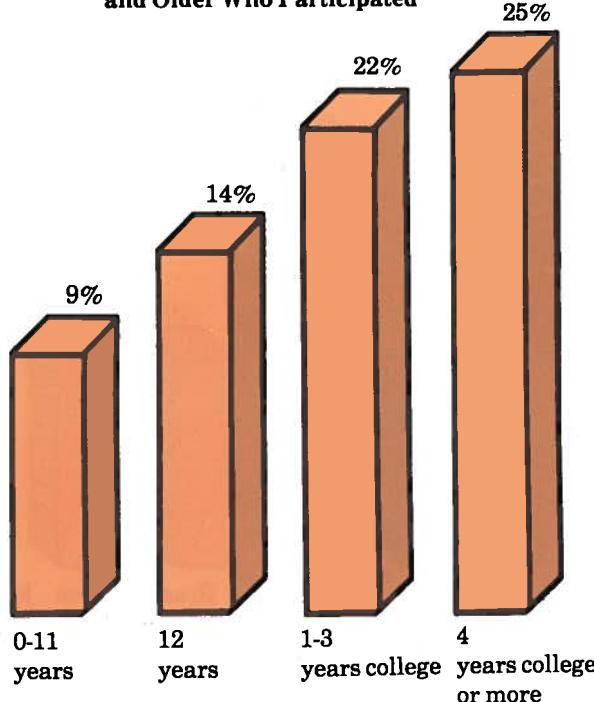

Total participants	29.3 million
Education	
0-11 years	3.9 million
12 years	9.8 million
1-3 years college	7.4 million
4 or more years college	8.2 million
Race	
White	28.1 million
Black	810 thousand
Other	472 thousand

Percent of Primary Nonresidential Participants 16 Years Old and Older

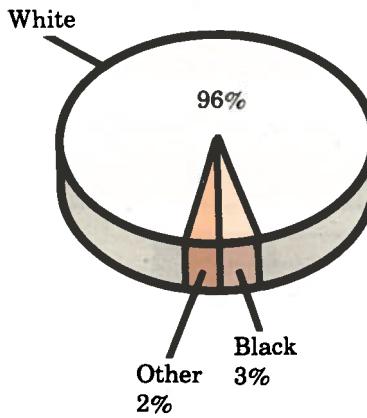

Percent of Population 16 Years Old and Older Who Participated

Percent of Population 16 Years Old and Older Who Participated

Percent of Primary Nonresidential Participants 16 Years Old and Older

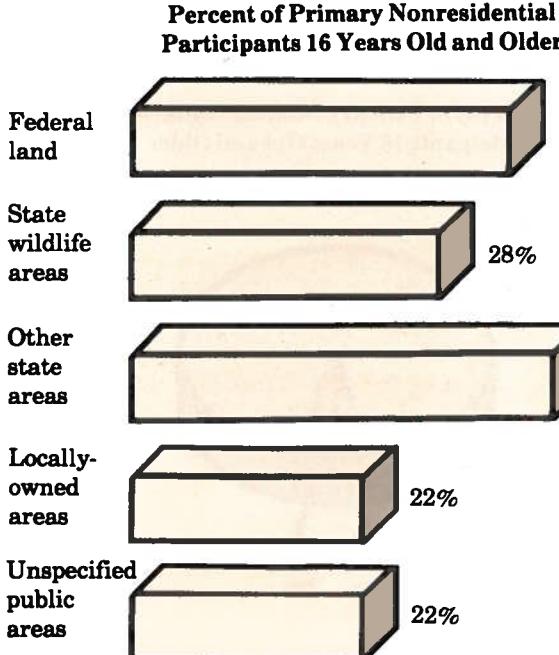

Public Lands Visited by Primary Nonresidential Participants

In 1985, 25.2 million of the 29.3 million primary nonresidential participants 16 years old and older visited areas on public lands during their primary nonresidential trips. Of the 29.3 million individuals who took trips primarily to observe, photograph, or feed wildlife, 33 percent visited areas on Federally owned areas while on their trips. State wildlife areas attracted 28 percent of all primary nonresidential participants, while 36 percent visited other state areas. Locally owned public areas drew 22 percent of those who took trips where the enjoyment of wildlife was the primary focus. Nearly 22 percent of the primary nonresidential participants visited areas on public lands to observe, photograph, or feed wildlife but did not specify the ownership of those public lands.

Primary Nonresidential Participants

Total participants	29.3 million
Total visitors to public areas	25.2 million
Federal land	9.6 million
State wildlife areas	8.3 million
Other state areas	10.4 million
Local areas	6.5 million
Unspecified public areas	6.4 million

Source: Table 63.

Type of Site Visited by Primary Nonresidential Participants

In 1985, most primary nonresidential participants visited several types of habitats. Nearly two-thirds of the 29.3 million participants 16 years old and older visited woodland sites in the U.S. while on their trips for wildlife observation, feeding, or photography. Over 18.6 million participants, 64 percent of the total, included visits to woodlands on their trips. Another very popular place to visit during primary nonresidential trips was a lake or streamside. This habitat type was visited by 14.8 million individuals, 50 percent of all primary nonresidential participants. Even though oceanside and manmade areas were visited less than most other habitat types, each was visited by nearly 20 percent of the primary nonresidential participants.

Another way to identify the use of various habitat types for primary nonresidential activities is to look at the type of site visited 'most often' in 1985. About 39 percent of the primary nonresidential participants indicated that they visited woodland sites most

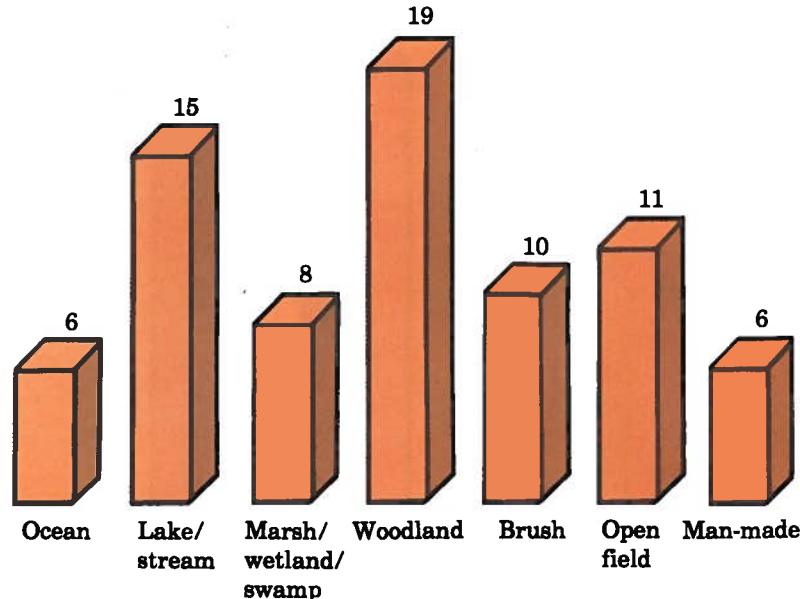

often, followed by 24 percent who said they visited lake or streamside sites most often. Each of the remaining types of sites was visited most often by less than 12 percent of the primary nonresidential participants.

Primary Nonresidential Participants

Total participants	29.3 million
Woodland	18.6 million
Lake or streamside	14.8 million
Open field	11.4 million
Brush covered area	10.3 million
Marsh, wetland, swamp	8.4 million
Man-made area	5.8 million
Oceanside	5.7 million

**Primary Nonresidential Participants
16 Years Old and Older
(Millions)**

Wildlife Observed, Photographed, or Fed by Primary Nonresidential Participants

In 1985, many types of wildlife were appreciated by the 29.3 million primary nonresidential participants 16 years old and older who took trips to observe, photograph, or feed wildlife. As a single category, birds provided primary nonresidential enjoyment for 25.0 million. Birds of prey (hawks, owls, eagles, etc.) were associated with the primary nonresidential activities of 11.1 million participants, waterfowl and shorebirds (ducks, geese, herons, etc.) were enjoyed by 18.6 million, and game birds (pheasants, grouse, turkey, etc.) were fed, photographed or observed on trips taken by 7.9 million participants.

Land mammals (bears, deer, rabbits, coyotes, etc.) were among the wildlife subjects on the trips of 22.7 million participants. The primary nonresidential experiences of 11.4 million individuals involved insects and spiders, and the trips of 11.1 million involved amphibians and reptiles. A significant 9.4 million participants enjoyed feeding, photographing or observing fish.

Primary Nonresidential Participants

Total participants	29.3 million
Birds, total	25.0 million
Birds of prey	11.1 million
Waterfowl and shorebirds	18.6 million
Game birds	7.9 million
Land mammals, total	22.7 million
Large land mammals	13.7 million
Small land mammals	18.9 million
Fish	9.4 million
Insects and spiders	11.4 million
Amphibians and reptiles	11.1 million
Shellfish	3.6 million
Marine mammals	3.5 million

Source: Table 61.

Participation in Primary Residential Activities

In 1985, over one half of the population 16 years old and older sought opportunities to enjoy wildlife within 1 mile of their home as the primary purpose of an activity. These 105.3 million primary residential participants included 63.6 million persons, 35 percent of the population, who closely observed wildlife around their homes. Many of these individuals were among the 85.8 million Americans, 47 percent of the population, who fed wildlife around their homes. This group of wildlife feeders included 82.5 million persons (46 percent of the population) who fed wild birds, and 23.7 million (13 percent of the population) who fed other wildlife around their homes. Significant numbers of Americans

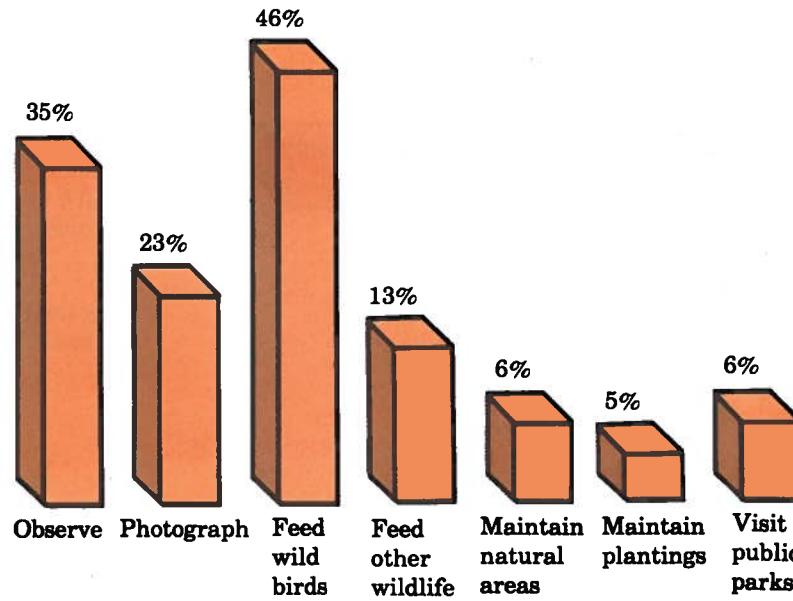

maintained natural areas (11.6 million) and plantings (9.7 million) around their homes for the benefit of wildlife. There were 16.5 million persons, 9 percent of the population, who visited public parks or natural areas within one mile of their homes to enjoy wildlife.

Primary Residential Participants

Total participants	105.3 million
Observe wildlife	63.6 million
Photograph wildlife	18.0 million
Feed wild birds	82.5 million
Feed other wildlife	23.7 million
Maintain natural areas	11.6 million
Maintain plantings	9.7 million
Visit public parks	16.5 million

Sources: Table 64.

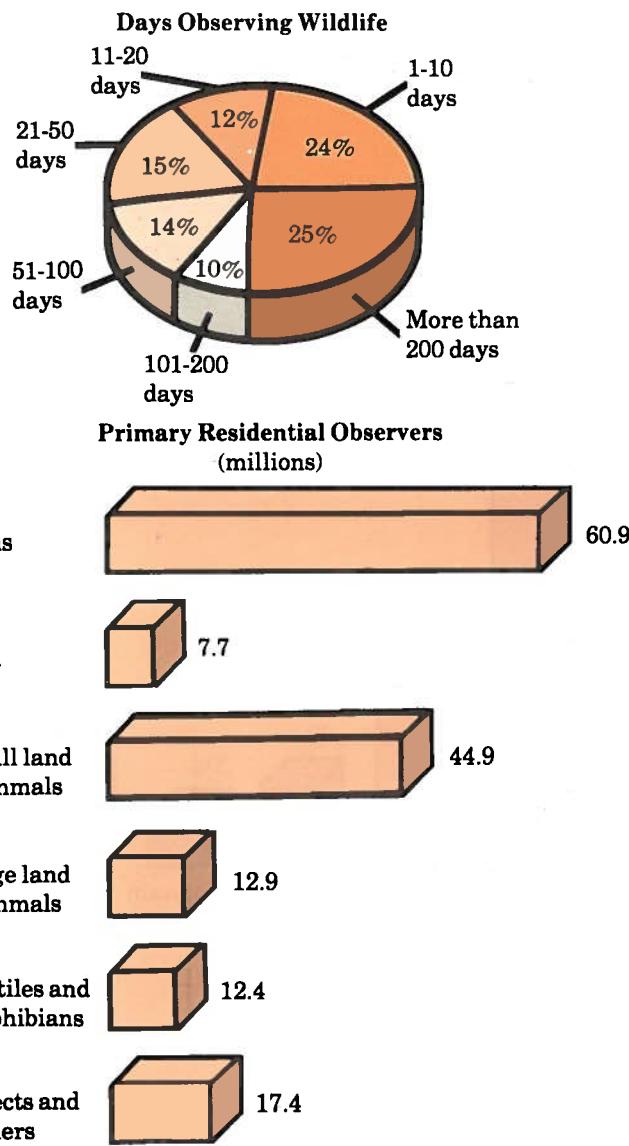

Percent of Population 16 Years Old and Older Who Participated

Primary Residential Wildlife Observers

Of the 63.6 million primary residential wildlife observers 16 years old and older, 25 percent spent more than 200 days observing wildlife around their home in 1985. They were among the 49 percent who spent 51 days or more in 1985 observing wildlife around the home. The remaining 32.1 million observers spent less than 51 days observing wildlife around the home.

Some 60.9 million participants, 96 percent of all primary residential wildlife observers, closely observed or tried to identify wild birds around the home. Small land mammals, such as squirrels and rabbits, were observed around the homes of 44.9 million participants. Large land mammals (deer, antelope, wolves, etc.) and fish were observed by 12.9 million and 7.7 million persons respectively.

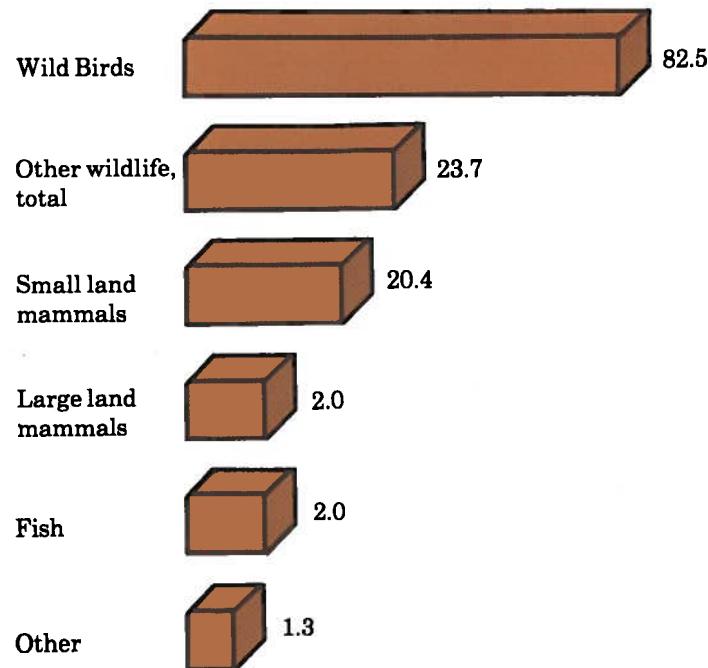

Primary Residential Wildlife Feeders

A total of 85.8 million Americans fed birds and other wildlife around their homes in 1985. The survey found that 82.5 million people, almost half the population 16 years old and older, fed wild birds once per week for at least one month. On average, primary residential bird feeders fed wild birds an average of 6 months during the year.

About 23.7 million primary residential participants, 13 percent of the U.S. population, fed wildlife other than wild birds in 1985. Wildlife that was fed by these primary residential participants included small land mammals (such as squirrels or rabbits) which were fed by 20.4 million, large land mammals (such as deer or bears) which were fed by 2.0 million, and fish, which were fed by 2.0 million

individuals. Like those who fed birds, the average primary residential participant spent an average of 6 months feeding wildlife other than birds during the year.

Wildlife Fed by Primary Residential Participants (Millions)

Sex and Age of Primary Residential Participants

A majority of Americans 16 years old and older participated in primary residential activities in 1985. Among men aged 16 and older, 56 percent engaged in primary nonconsumptive activities around their homes, as did 60 percent of women. Of a total of 105.3 million participants, 46 percent, or 47.9 million were men. The remaining 57.4 million, 54 percent of the total, were women.

Half of those in the 16 to 17 year old age group participated in primary residential activities. This age group contributed 3.8 million participants, 4 percent of the total. The population 18-24 years old had a participation rate of 47 percent. The 12.0 million participants in this age group were 11

percent of all who enjoyed wildlife around their homes. Those 25-44 years old were 42 percent of all primary residential participants. These 44.2 million individuals reflected a 60 percent participation rate by those who were 25-44 years old. Of the population 45 to 64 years old, 61 percent participated. This group included 28.6 million participants, 27 percent of all primary residential participants. Participation remained high among those in the oldest age class. For those 65 years old and older, 59 percent engaged in activities around the home where wildlife was the primary focus. There were 16.6 million participants in this age category, or 16 percent of the total.

Primary Residential Participants

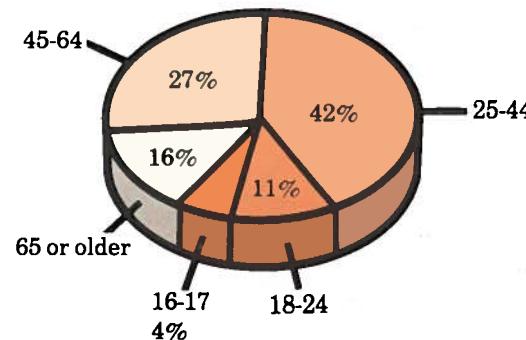

Total, both sexes	105.3 million
Male	47.9 million
Female	57.4 million
Total, all ages	105.3 million
16-17	3.8 million
18-24	12.0 million
25-44	44.2 million
45-64	28.6 million
65 years and older	16.6 million

Source: Table 68.

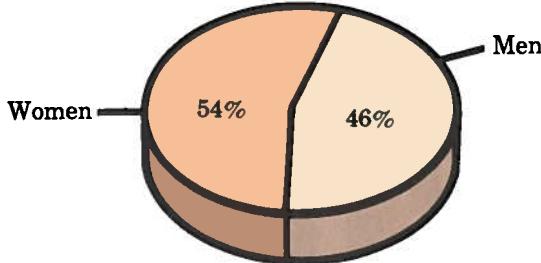

Percent of Population 16 Years Old and Older Who Participated

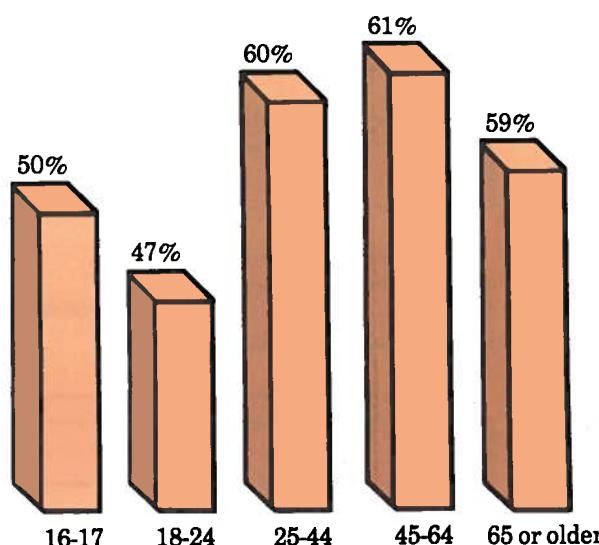

Percent of Primary Residential Participants 16 Years Old and Older

Percent of Primary Residential Participants 16 Years Old and Older

Percent of Population 16 Years Old and Older Who Participated

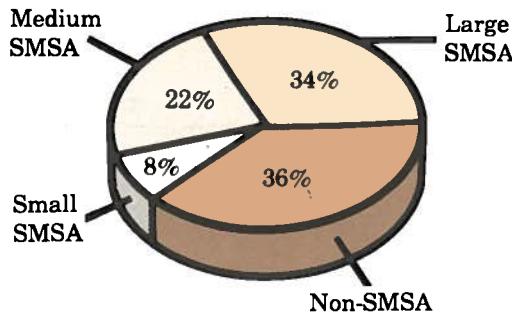

Size of Residence of Primary Residential Participants

Over half of the metropolitan and non-metropolitan populations 16 years and older participated in primary residential activities in 1985. About 53 percent of those who resided in standard metropolitan statistical areas (SMSA's) with a population of 1,000,000 or more took an active interest in wildlife around their homes. These largest SMSA's contributed 38.3 million participants, 36 percent of all primary residential participants. There were 23.4 million participants, 22 percent of the total, who lived in SMSA's with populations of 250,000-999,999. About 60 percent of the population living in these areas participated in primary residential activities in 1985. Smaller SMSA's (population size 50,000-249,999), where

56 percent of the population engaged in these activities, contributed 8.2 million participants, 8 percent of the total. The highest participation rate, 64 percent, was among those who lived outside metropolitan areas. Altogether, 35.4 million primary residential participants, 34 percent of the total, resided in non-SMSA areas.

Percent of Primary Residential Participants 16 Years Old and Older

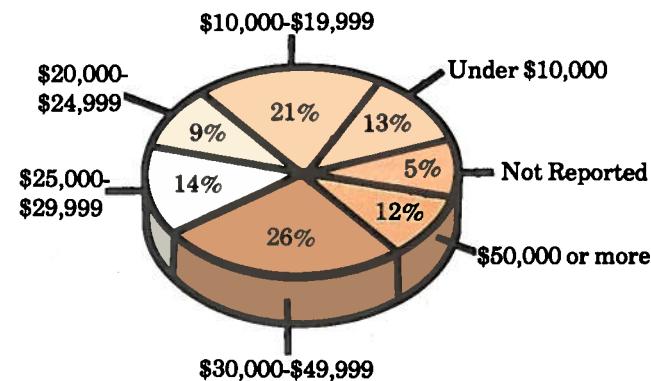

in activities around the home where wildlife was the primary focus. Within the 5 percent of surveyed households that did not report their income, over half of the individuals were primary residential participants.

In 1985 the median income of U.S. households was about \$25,000, with half of the households in the population having incomes of less than \$25,000 and the other half having incomes of \$25,000 or more. By comparison, about 43 percent of primary residential participants came from households with annual incomes less than \$25,000, while 52 percent came from households with incomes of \$25,000 or more. The remaining 5 percent of primary residential participants lived in households that did not report their incomes.

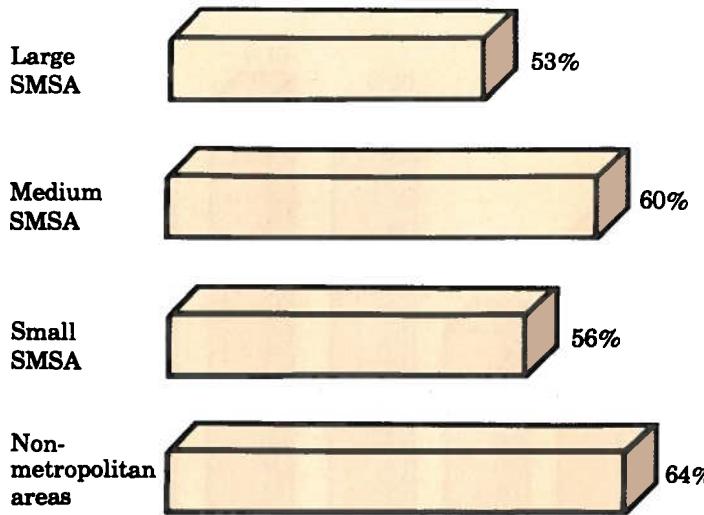

Income of Primary Residential Participants

Large numbers of Americans 16 years old and older from households in all economic groups participated in primary residential activities in 1985. The participation rate was highest, 68 percent, for individuals living in households with annual incomes of \$30,000-\$49,999. About 50 percent of the population in households with annual incomes under \$10,000 engaged

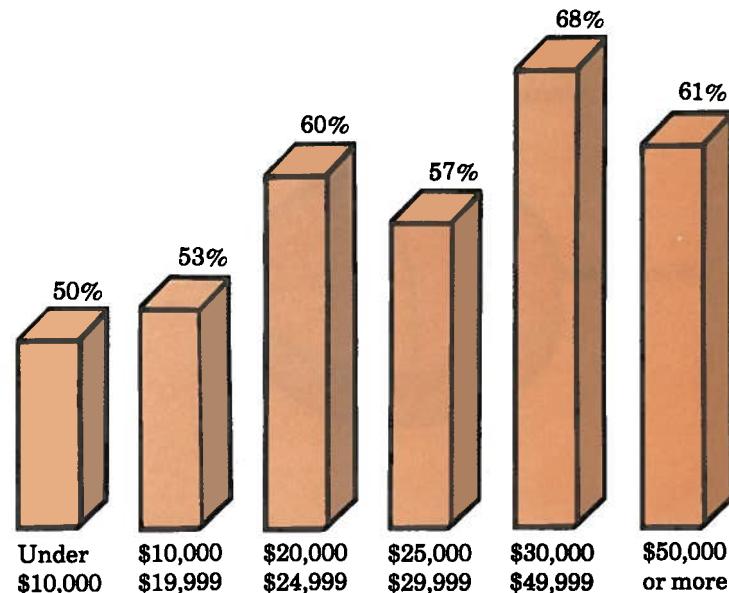

Percent of Primary Residential Participants 16 Years Old and Older

Percent of Population 16 Years Old and Older Who Participated

Percent of Population 16 Years or Older Who Participated

Education and Race of Primary Residential Participants

By educational group, the 1985 participation rates in primary residential activities by those 16 years old and older ranged from 51 to 64 percent. About 23.0 million participants, or 22 percent of those who took an active interest in wildlife around their homes, had 0-11 years of education. For persons with less than a high school diploma, the participation rate for these activities was 51 percent. Those with 12 years of education participated at the rate of 57 percent. About 40.0 million participants, 38 percent of all primary residential participants, had a high school diploma. Nearly 64 percent of the people with 1-3 years of college enjoyed wildlife in the immediate vicinity of their homes. This educational group

contributed 21.8 million participants, 21 percent of the total. The remaining 20.4 million participants who had completed 4 years or more of college in 1985 were 19 percent of the total.

Within this group, 63 percent participated in primary residential activities.

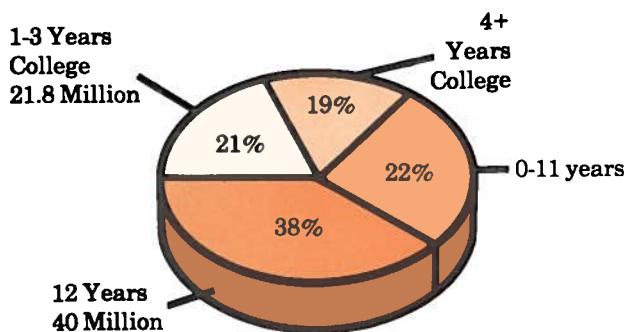

In 1985, significant numbers of individuals 16 years old and older of all races participated in primary residential activities. Rates of participation were 62 percent of whites, 35 percent of blacks, and 30 percent of those of other races. Within the total number of persons who took an active interest in wildlife around their homes, 92 percent (96.9 million) were white, 6 percent (6.5 million) were black, and 2 percent (2.0 million) were of other races.

Primary Residential Participants

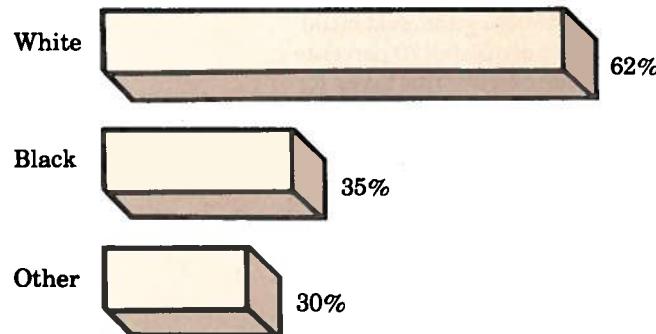

Total participants	105.3 million

Percent of Primary Residential Participants 16 Years Old and Older

Secondary Nonconsumptive Participation

The largest category of individuals 16 years old and older who participated in nonconsumptive activities in the U.S. in 1985 was the secondary nonconsumptive group - those individuals who enjoyed seeing or hearing wildlife while they were doing other things. This group of 127.4 million individuals, 70 percent of the U.S. population, included many sportsmen and primary nonconsumptive participants.

About 89.5 million secondary nonresidential participants 16 years old and older enjoyed wildlife while on trips of 1 mile or more from their home that were taken for another purpose. Trips for shopping or to go to work or school were not included. For an estimated 89 percent of those who participated in secondary nonresidential activities, the presence of wildlife was regarded as "important" or "very important" to the enjoyment of their recreational activities. Of the 89.5 million secondary nonresidential participants, an estimated 70 percent enjoyed wildlife on 1-10 trips taken for another purpose, and 7 percent took 51 or more trips where the presence of wildlife enhanced the experience.

There were 117.4 million secondary residential participants - those individuals 16 years old and older who enjoyed seeing or hearing wildlife around their homes while engaged in activities with other primary purposes. Among secondary residential participants, an estimated 16 percent enjoyed wildlife on 1-10 days while doing other things around their homes in 1985. About 12 percent of the secondary residential participants spent between 101 and 200 days enjoying wildlife while engaged in other activities around their homes. A substantial group, 24 percent of the total, spent 201 or more days in 1985 enjoying their secondary residential activities.

Tables

Purpose and Coverage of Tables

The statistical tables of this report were designed to meet a wide range of needs of those interested in knowing about wildlife-associated recreation. Special terms used in these tables are defined in Appendix A.

The tables are based on responses to the 1985 Survey which was designed to learn about American participation in wildlife-associated recreation. To take part in the survey a respondent must have been a U.S. resident (a resident of one of the fifty states or the District of Columbia). No one residing outside the U.S. (including U.S. citizens) was eligible for a survey interview.

Therefore, reported state and national totals do not include participation by those who were not U.S. residents.

When participation in foreign countries by U.S. residents is being reported, it is noted in the table's title, captions, stubs or footnotes.

Information reported for those 16 years old and older is based upon interviews with respondents in this age group. Reported results for those 6 to 15 years old are based upon interviews with an older member of the same household.

Coverage of an Individual Table

Since the survey covers many activities in various places by participants of different ages, each table's title, captions, stubs and footnotes are designed to identify and articulate each item being reported in the table. For example, the title and footnotes of Table 1 show that U.S. residents who fished or hunted in the U.S. are being reported. By contrast, the title of Table 3 shows that it reports U.S. residents who fished or hunted, regardless of whether they fished or hunted in the U.S. or in foreign countries.

Percentages Reported in the Tables

Percentages are reported in the tables for the convenience of the user of the information. When exclusive groups are being reported, the base of a percentage is apparent from its context because the percents add to 100 percent (plus or minus a rounding error). For example, Table 1 reports the number of sportsmen who fished only (67 percent), those who fished and hunted (25 percent), and those who hunted but did not fish (8 percent). These form 100 percent because they are exclusive groups.

Perents should not add to 100 when non-exclusive groups are being reported. Using Table 1 as an example again, note that adding the percentages associated with total fishermen (92 percent) and total hunters (33 percent) will not equal total sportsmen (100 percent) because fishermen and hunters are not exclusive groups.

When the base of the percentage may not be apparent in context, it is identified in a footnote. For example, Table 1 reports two percentages with different bases for the convenience of those who will use either or both kinds of information. Therefore, footnotes are used to clarify the bases of the reported percentages.

Footnotes to the Tables

Footnotes are used to clarify the information or items that are being reported in a table. Symbols in the body of a table may indicate important footnotes. These symbols are used in the tables to refer to the same footnote each time they appear:

- * Estimate based on a small sample size.
- ... Sample size too small to report data reliably.
- W Less than .5 dollars.
- Z Less than .5 percent.
- X Not applicable.

Estimates based upon fewer than ten responses are regarded as being based on a sample size that is too small for reliable reporting. An estimate based upon at least ten but fewer than 25 responses is treated as an estimate based on a small sample size. Other footnotes appear, as necessary, to qualify or clarify the estimates reported in the tables.

In addition, these two important footnotes appear frequently:

Detail does not add to total because of multiple responses.

Detail does not add to total because of multiple responses and nonresponse.

"Multiple responses" is a term used to reflect the fact that individuals or their characteristics fall into more than one category. Using Table 2 for examples, those who fished in saltwater and freshwater appear in each of these totals. Yet each fisherman is represented once in the "Total, all fishing" row. Similarly, those who hunt for big game and small game are counted only once as a hunter. Therefore, totals may be smaller than the sum of subcategories when multiple responses are appropriate.

"Nonresponse" exists because the survey's questions were answered voluntarily. Some respondents did not answer all questions. The effect of nonresponses may be illustrated by Table 19, where the reported total for fishing and hunting expenditures is greater than the sum of reported fishing expenditures plus reported hunting expenditures. This occurs because some respondents did not respond to the questions about the primary purpose of their expenditures. As a result, it is known that the expenditures were for fishing or hunting, but it is not known whether they were for fishing or whether they were for hunting. In general, totals are greater than the sum of subcategories when nonresponses have occurred.

Table 1. Participants in Fishing and Hunting in the U.S. : 1985

(U.S. population 6 years old and older. Numbers in thousands)

(1) Includes persons who purchased a license in 1985 in any state. Respondents could have been licensed in one state and exempt in another.

(2) Includes those persons who did not purchase a license in any state in 1985 and those who did not specify a license purchase in 1985.

(3) Includes freshwater fishing days only.

Table 35. Freshwater Fishermen and Days of Fishing, by Type of Water and Place in the U.S.: 1985

(U.S. population 16 years old and older. Numbers in thousands. Excludes Great Lakes fishing)

Fishermen and days of fishing			Fishing by place					
			Total in U.S.		In state of residence		In other states

Other state area	16,623	18	8,247	18	5,790	19	1,164	10	1,421	19
Local	5,619	6	1,814	4	2,314	8	783	7	608	8
Unspecified public land (1).....	16,201	17	5,927	13	6,247	21	2,754	23	1,273	17

Note: Detail does not add to total because of multiple responses and nonresponse.

(1) Respondent was unable to say whether the publicly held area was owned by federal, state or local government.

Table 41. Hunters and Days of Hunting on Wetlands and Extent of Wetlands Use, by Type of Hunting in the U.S.: 1985

(U.S. population 16 years old and older. Numbers in thousands)

Hunters, days of hunting, and extent of wetlands use	Total, all hunting		Type of hunting								
			Big game		Small game		Migratory bird		Other animals		
	Number	Percent	Number	Percent	Number	Percent	Number	Percent	Number	Percent	
Hunters											
Total hunters	16,684	100	12,520	100	10,831	100	5,036	100	2,837	100	
Hunters using wetlands	6,340	38	3,546	28	3,022	28	2,401	48	645	23	
Hunters not using wetlands (1)	10,344	62	8,974	72	7,808	72	2,635	52	2,193	77	
Days of hunting											
Total days of hunting	334,013	100	131,330	100	132,263	100	41,682	100	47,050	100	
Days of hunting on wetlands (2)	85,861	26	28,647	22	26,370	20	19,903	48	10,942	23	
Extent of wetlands use											
Total hunters using wetlands	6,340	100	3,546	100	3,022	100	2,401	100	645	100	
Hunters using wetlands:											
1 - 19 percent of hunters days	1,164	18	378	11	300	10	80	3	58	9	
20 - 39 percent of hunters days	1,105	17	558	16	460	15	133	6	58	9	
40 - 59 percent of hunters days	1,027	16	456	13	450	15	174	7	77	12	
60 - 79 percent of hunters days	652	10	266	8	222	7	171	7	36	6	
80 - 99 percent of hunters days	394	6	129	4	88	3	78	3	13*	2*	
100 percent of hunters days	1,694	27	1,720	48	1,460	48	1,700	71	390	60	

Note: Detail does not add to total because of multiple responses and nonresponse.

(1) Includes those who did not specify whether they hunted on wetlands and those who specified no hunting on wetlands.

(2) Days of hunting on wetlands includes both days spent solely on wetlands and those spent on wetlands and non-wetlands.

* Estimate based on a small sample size.

Table 42. Hunters and Days of Hunting on Public Land in the U.S., by Selected Characteristic: 1985

5 or more years college.....	1,152	490	42	6	17,490	5,234	30	6	11

Note: Percent of total hunters and percent of total days are based on the total hunters and total days columns for each row.

Percent of hunters using public land and percent of days on public land are based on the total number of hunters on public land and total number of days on public land.

(1) Hunters on public land include those who hunted on both public and private land.

(2) Days of hunting on public land includes both days spent solely on public land and those spent on public and private land.

Table 43. Fishermen Using Special Fishing Methods, Ice Fishermen and Days of Ice Fishing, by Type of Fishing in the U.S.: 1985

(U.S. population 16 years old and older. Numbers in thousands)

Fisherman and days	Total, all fishing		Type of Fishing

55 - 64 years	4,809	153	3	1,498	30	2
65 years or older	3,703	116	3	897	26	3

Note: Data reported on this table for those under 16 years of age and for those participating for the first time (all ages) are from screening interviews in which one adult household member responded for all household members.

**Table 50. Fishermen and Hunters Participating in 1984 but not in 1985,
by Age Group**

(U.S. population 6 years old and older. Numbers in thousands)

Age group	Fishermen		Hunters	
	Number	Percent	Number	Percent
Total, all ages	13,436	100	3,517	100
6 - 8 years	371	3	16*	(Z)*
9 - 11 years	571	4	46	1
12 - 15 years	860	6	137	4
16 - 17 years	524	4	139	4
18 - 24 years	1,791	13	647	18
25 - 34 years	2,988	22	998	28
35 - 44 years	2,336	17	636	18
45 - 54 years	1,464	11	391	11
55 - 64 years	1,316	10	322	9
65 years or older	1,215	9	185	5

Note: Data reported on this table are from screening interviews in which one adult household member responded for all household members. Includes those who fished or hunted in other countries.

* Estimate based on a small sample size.

(Z) Less than .5 percent.

Table 51. Age First Hunted, Years of Hunting and Introduction to Hunting, by Sex: 1985

(U.S. population 16 years old and older. Numbers in thousands)

Beginning age, years of hunting, and introduction to hunting	Total hunters		Male hunters		Female hunters	
	Number	Percent	Number	Percent	Number	Percent
Beginning age						
Total hunters	16,684	100	15,195	100	1,489	100
Age when first hunted:						
6 years of age or less	497	3	465	3	32*	2*
6 - 8 years of age	2,242	13	2,092	14	150	10
9 - 11 years of age	3,059	18	2,923	19	135	9
12 - 15 years of age	6,968	42	6,643	44	325	22
16 - 17 years of age	1,633	10	1,510	10	123	8
18 - 24 years of age	1,323	8	940	6	383	26
25 - 34 years of age	638	4	415	3	223	15
35 - 44 years of age	168	1	85	1	83	6
45 - 54 years of age	40	(Z)	23*	(Z)*	18*	1*
55 - 64 years of age
65 years of age or older
Years of hunting						
Total hunters	16,684	100	15,195	100	1,489	100
Years hunted:						
1 - 2 years	520	3	387	3	132	9
3 - 5 years	1,333	8	1,139	7	194	13
6 - 9 years	1,955	12	1,663	11	292	20
10 - 19 years	4,608	28	4,197	28	410	28
20 - 29 years	3,462	21	3,272	22	190	13
30 - 39 years	2,252	13	2,139	14	113	8
40 years or more	2,382	14	2,271	15	111	7
Introduction to hunting						
Total hunters	16,684	100	15,195	100	1,489	100
Introduced to hunting by:						
Father or mother	10,370	62	9,694	64	675	45
Uncle or grandfather	1,403	8	1,354	9	50	3
Spouse	475	3	17*	(Z)*	458	31
Another family member	1,492	9	1,367	9	125	8
Friends of same age	1,928	12	1,780	12	148	10
Other	887	5	861	6	27*	2*

Note: Detail does not add to total because of multiple responses and nonresponse. Corresponding data for fishermen not available. Years of hunting are not necessarily consecutive.

* Estimate based on a small sample size.

... Sample size too small to report data reliably.

(Z) Less than .5 percent.

Table 52. Most Recent Year of Hunting, by Age Group

(U.S. population 6 years old and older. Numbers in thousands)

Age group	Total, all persons who hunted in 1985 or earlier year		Most recent year of hunting					
			1985		1984		1983	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Total, all ages.....	38,363	100	18,483	48	3,517	9	1,812	5
6 - 11 years.....	583	100	499	86	62	11
12 - 15 years.....	1,519	100	1,300	86	137	9	43	3
16 - 17 years.....	1,283	100	1,056	82	139	11	40	3
18 - 24 years.....	4,710	100	2,896	61	647	14	332	7
25 - 34 years.....	8,754	100	4,588	52	998	11	514	6
35 - 44 years.....	7,524	100	3,597	48	636	8	370	5
45 - 54 years.....	5,143	100	2,152	42	391	8	204	4
55 - 64 years.....	4,460	100	1,498	34	322	7	168	4
65 years or older.....	4,387	100	897	20	185	4	128	3

Age group	Most recent year of hunting							
	1982		1981		1980		Before 1980	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Total, all ages.....	1,038	3	840	2	1,315	3	11,358	30
6 - 11 years.....
12 - 15 years.....	18*	1*	8*	1*
16 - 17 years.....	20	2	9*	1*	10*	1*	9*	1*
18 - 24 years.....	159	3	142	3	188	4	347	7
25 - 34 years.....	303	3	238	3	338	4	1,775	20
35 - 44 years.....	223	3	180	2	259	3	2,259	30
45 - 54 years.....	161	3	96	2	190	4	1,949	38
55 - 64 years.....	78	2	86	2	163	4	2,146	48
65 years or older.....	76	2	83	2	158	4	2,860	65

Note: Data reported on this table for those under 16 years of age and for years prior to 1985 are from screening interviews in which one adult household member responded for all household members. Corresponding data for fishermen not available.

* Estimate based on a small sample size.

... Sample size too small to report data reliably.

Table 53. Fishermen, Expenditures, and Days of Fishing, by Average One-Way Distance Traveled and Type of Fishing in the U.S.: 1985

(U.S. population 16 years old and older. Numbers in thousands)

Fishermen, expenditures and days of fishing	Total, All Fishing		Type of Fishing					
			Freshwater, except Great Lakes		Great Lakes		Saltwater	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
Total fishermen	46,357	100	38,433	100	3,766	100	13,709	100
Fishermen who traveled:								
0 - 5 miles	10,615	23	9,275	24	947	25	3,607	26
6 - 24 miles	1,041	2	855	2	60	2	294	2

Total secondary participants	24,984	95	71	10,101	95	69	7,360	96	73	7,522	95	71
Nonresidential	18,208	69	52	7,114	67	49	5,459	71	54	5,635	71	54
Residential	21,844	83	62	8,864	83	61	6,433	84	63	6,546	83	62

Note: Detail does not add to total because of multiple responses. Columns showing percent of participants are based on the first row of each column. Columns showing percent of population in age group are based on the U.S. population in each age category, including those who did not participate in nonconsumptive activities. Data reported on this table are from screening interviews in which one adult household member responded for all household members. Includes those who participated in other countries.

Table 58. Primary Nonresidential Participants, Trips and Days of Participation in the U.S. and Other Countries: 1985

(U.S. population 16 years old and older. Numbers in thousands)

Participants, trips and days of participation	Total, all countries	Place of activity								
		In U.S.				In other countries				
		Total		In state of residence		In other states

51 trips or more	6,348	7	4,024	12	2,098	6	210	2

Note: Detail does not add to total because of nonresponse.

Table 63. Nonresidential Participants Visiting Public Areas in the U.S., by Level of Interest: 1985

(16 years old and older. Numbers in thousands)

Participants			Level of interest			
			Primary		Secondary	
	Number	Percent	Number	Percent	Number	Percent
Nonresidential participants	94,812	100	29,347	100	89,532	100
Visited public areas (1).....	69,155	73	25,199	86	60,892	68
Did not visit public areas (2).....	25,656	27	4,148	14	28,640	32
Participants visiting public areas						
Total, all public areas (1).....	69,155	100	25,199	100	60,892	100
Federal areas	27,388	40	9,550	38	22,474	37
State wildlife areas	20,524	30	8,254	33	15,572	26
Other state areas.....	37,142	54	10,429	41	32,162	53
Local government areas	17,446	25	6,626	26	13,283	22
Unspecified public areas (3).....	17,398	25	6,425	25	13,349	22

Note: Detail does not add to total because of multiple responses.

(1) Includes those who visited public areas only and those who visited both private and public areas.

(2) Includes participants who visited private areas only and those who were unable to say whether the area was privately or publicly owned.

(3) Respondent was unable to say whether the publicly held area was owned by Federal, State or local government.

Table 64. Participation in Primary Residential Activities: 1985

(U.S. population 16 years old and older. Numbers in thousands)

Activity	Participants		Activity	Participants	
	Number	Percent		Number	Percent
Total primary residential participants	105,286	100	Photograph wildlife		
Observe wildlife	63,641	60	Participants photographing:		
Visit public parks	16,480	16	Total, 1 day or more	18,047	100
Photograph wildlife	18,047	17	1 day	2,680	15
Feed wildlife	85,800	81	2-3 day	5,628	31
Maintain natural areas	11,631	11	4-5 days	3,386	19
Maintain plantings	9,742	9	6-10 days	3,230	18
Observe wildlife			11-20 days	1,443	8
Participants observing:			21 or more days	1,297	7
Total, all wildlife	63,641	100	Feed wildlife		
Birds	60,859	96	Participants Feeding:		
Fish	7,694	12	Total, all Wildlife	85,800	100
Small land mammals	44,938	71	Wild birds	82,508	96
Large land mammals	12,864	20	Other wildlife	23,741	28
Amphibians or reptiles	12,367	19	Fish	1,951	2
Insects or spiders	17,442	27	Small land mammals	20,431	24
Other wildlife	1,224	2	Large land mammals	2,012	2
Participants most often observing:			Other wildlife	1,311	2
Total, all wildlife	63,641	100	Average months feeding wild birds (2)	6	(X)
Birds	49,845	78	Average months feeding other wildlife	6	(X)
Fish	465	1	Maintain natural areas		
Small land mammals	8,601	14	Participants maintaining:		
Large land mammals	2,184	3	Total, all acreages	11,631	100
Amphibians or reptiles	516	1	Less than 1 acre	5,709	49
Insects or spiders	1,076	2	1-10 acres	1,100	9
Other wildlife	160	(Z)	11-50 acres	462	4
Participants observing:			More than 50 acres	462	4
Total, 1 day or more	63,641	100	Maintain plantings		
1-10 days	15,195	24	Participants maintaining plantings	9,742	100
11-20 days	7,531	12	Participants spending:		
21-50 days	9,341	15	Under \$25	2,714	28
51-100 days	8,611	14	\$25-74.99	1,118	11
101-200 days	6,445	10	\$75 or more	591	6
201 days or more	16,123	25	Average expenditure per participant for plantings	\$21	(X)
Visit public parks (1)					
Participants visiting:					
Total, 1 day or more	16,480	100			
1-5 days	7,906	48			
6-11 days	3,230	20			
12 days or more	5,110	31			

Note: Detail does not add to total because of multiple responses and nonresponse.

(1) Includes visits only to parks or publicly held areas within one mile of home.

(2) Based on the number of months where participants fed wild birds at least once a week.

(X) Not applicable.

(Z) Less than .5 percent.

Table 65. Secondary Residential Participants, by Frequency of Observation and Wildlife Observed: 1985

(U.S. population 16 years old and older. Numbers in thousands)

Participants, frequency of observation and wildlife observed	Secondary residential participants	
	Number	Percent
Frequency of observation		
Participants observing:		
Total, 1 day or more	117,411	100
1-10 days	18,331	16
11-20 days	14,631	12
21-50 days	20,988	18
51-100 days	20,209	17
101-200 days	13,992	12
201 days or more	28,414	24
Wildlife observed		
Participants observing:		
Total, all wildlife	117,411	100
Birds	114,768	98
Fish	4,609	4
Small land mammals	64,801	55
Large land mammals	13,384	11
Other wildlife	5,902	5

Note: Detail does not add to total because of multiple responses and nonresponse.

Table 66. Expenditures in the U.S. for Nonconsumptive Wildlife-Related Recreation: 1985

(U.S. population 16 years old and older)

Expenditure item	Expenditures (thousands of dollars)	Spenders		
		Number (thousands)	Percent of nonconsumptive participants (2)	Average per spender (dollars)
Total, all items (1)	14,267,213	64,431	48	221
Primary trip expenditures				
Total trip-related	4,430,808	26,117	89	170
Food and lodging, total	2,513,206	20,080	68	125

Note: Detail does not add to total because of multiple responses and nonresponse. Percent who participated shows the percent of each row's population who participated in the activity named by the column (the percent of those living in urban areas who observed wildlife, etc.).

Percent columns show the percent of each column's participants who are described by the row heading (the percent of those who observed wildlife who lived in urban areas, etc.).

Note: Detail does not add to total because of nonresponse.

U.S. totals include responses from participants residing in the District of Columbia, as described in the statistical reliability appendix.

* Estimate based on a small sample size.

... Sample size too small to report data reliably.

Appendices

Appendix A - Definitions

Anadromous species - Fish that migrate from saltwater to freshwater to spawn, such as salmon, shad, steelhead, and striped bass.	South Carolina, Virginia, West Virginia
Annual household income - Total 1985 income of household members 14 years of age and over before taxes and other deductions.	West North Central : Kansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota
Auxiliary equipment - Items of equipment including camping gear that are owned primarily for wildlife-associated recreation. Items of auxiliary equipment are listed in Table 20 (fishing), Table 25 (hunting), and Table 66 (nonconsumptive).	West South Central : Arkansas, Louisiana, Oklahoma, Texas
Big game - Antelope, bear, deer, elk, moose, wild turkey and similar large animals which are hunted.	Day - Any part of a day spent in a given activity. For example, if someone hunted 2 hours one day and 3 hours another day, it would be recorded as 2 days of hunting. If someone hunted 2 hours in the morning and 3 hours in the evening of the same day, it would be considered 1 day of hunting.
Census regions -	Education - The highest completed grade of school or year of college.
East North Central : Illinois, Indiana, Michigan, Ohio, Wisconsin	Expenditures - Money spent in 1985 for wildlife-associated recreation trips in the U.S. or wildlife-associated recreational equipment purchased in the U.S. Expenditures include both money spent by participants for themselves and the value of gifts they received.
East South Central : Alabama, Kentucky, Mississippi, Tennessee	Federal land - Public land owned by the Federal government such as National Forests and National Wildlife Refuges.
Middle Atlantic : New Jersey, New York, Pennsylvania	Fishing - The sport of catching or attempting to catch fish with a hook, line, net or spear fishing equipment; catching or gathering shellfish (clams, crabs, etc.); gigging or shooting frogs. Fishing includes subsistence fishing as recognized by the State of Alaska, and the non-commercial seining or netting of fish, unless the fish are for use as bait. For example, seining for smelt is fishing, but seining for bait minnows is not included as fishing.
Mountain : Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming	Fishing equipment - Items owned primarily for fishing. These items are listed in Table 20.
New England : Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont	Freshwater - Reservoirs, lakes, ponds, and the non-tidal portions of rivers and streams.
Pacific : Alaska, California, Hawaii, Oregon, Washington	Gigging for frogs - Using a pronged spear to take frogs.
South Atlantic : Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina,	

Great Lakes fishing – Fishing in Lakes Superior, Michigan, Huron, St.Clair, Erie, and Ontario; their connecting waters such as the St.

Mary's River system, Detroit River, St. Clair River, and the Niagara River; and the St. Lawrence River south of the bridge at Cornwall, New York. Great Lakes fishing includes fishing in tributaries to the Great Lakes for smelt, steelhead and salmon.

Home – The starting point of a wildlife-associated recreational trip. It may be a permanent residence, or a temporary or seasonal residence such as a cabin.

Hunting – The sport of shooting or attempting to shoot wildlife with firearms or archery equipment.

Hunting includes subsistence hunting as recognized by the State of Alaska.

Hunting equipment – Items owned primarily for hunting. These items are listed in Table 25.

Local land – Public land owned by local governments such as county parks or municipal watersheds.

Maintain natural areas – To set aside one-quarter acre or more of natural environment such as wood lots or open fields for the primary purpose of benefiting wildlife.

Maintain plantings – To introduce or encourage the growth of food and cover plants for the primary purpose of benefiting wildlife.

Manmade impoundments – Bodies of water created by manmade dams or other controls.

Migratory birds – Birds that regularly migrate from one region or climate to another. This survey focuses on migratory birds which may be hunted, including band-tailed pigeons, coots, ducks, doves, gallinules, geese, rails, and woodcock.

Mode of fishing – Fishing from boat or shore. In the case of saltwater fishing, several types of boat fishing and several types of shore fishing appear in Table 37.

Multiple responses – The term used to reflect the fact that individuals or their characteristics fall into more than one reporting category. An example of a big game hunter who

hunted for deer and elk can show the effect of multiple responses. In this case, adding the number of deer hunters (1) and elk hunters (1) would overstate the number of big game hunters (1) because deer and elk hunters are not mutually exclusive categories. In contrast, total participants is the sum of male and female participants because male and female are mutually exclusive categories.

Nonconsumptive activity – Feeding, photographing or observing fish or other wildlife. (See also primary residential, primary nonresidential, secondary residential, and secondary nonresidential activities.)

Nonconsumptive equipment – Items owned primarily for observing, photographing or feeding wildlife. These items are listed in Table 66.

Nonresidents – Individuals who do not live in the state being reported. For example, a person living in Texas who watches whales in California is a nonresident participant in California.

Nonresponse – Nonresponse is a term used to reflect the fact that some survey respondents provide incomplete sets of information. For example, a survey respondent may have been unable to identify the primary type of hunting for which a gun was bought. Hunting expenditures will reflect the gun purchase, but it will not appear as spending for big game or any other type of hunting. In general, nonresponses result in reported totals that are greater than the sum of their apparent parts.

Observe – To take special interest in or try to identify birds, fish or other wildlife.

One-day trips – Trips on which the individual went and returned on the same day without an overnight stay.

Other animals – Coyotes, crows, foxes, groundhogs, prairie dogs, raccoons, and similar animals that are often regarded as varmints or pests. Other animals may be classified as unprotected or nongame animals by the state in which they are hunted.

Other state areas – Public lands owned by state governments, except

state wildlife management areas and state wildlife refuges. Examples of other state areas are state parks and state forests.

Participants – Individuals who engage in fishing, hunting, trapping, or a nonconsumptive activity.

Primary nonresidential activity – Trips or outings of at least one mile from home for the primary purpose of observing, photographing, or feeding wildlife. Trips to zoos, circuses, aquariums, and museums are not included.

Primary purpose – The principal motivation for an activity, trip, or expenditure.

Primary residential activity – Activity within one mile of the home with a primary purpose that is wildlife-related: (1) Closely observing or trying to identify birds or other wildlife, (2) photographing wildlife, (3) feeding birds or other wildlife on a regular basis, (4) maintaining natural areas of at least one-quarter acre for which benefit to wildlife is an important concern, (5) maintaining plantings (shrubs, agricultural crops, etc.) for which benefit to wildlife is an important concern, or (6) visiting public parks within one mile of home for the purpose of observing, photographing, or feeding wildlife.

Public areas – Public lands owned by local, state, or Federal governments.

Residents – Individuals who live in the state being reported. For example, persons who live in California and watch whales there are resident participants in California.

Rural – The non-urban population is classified as rural (see urban).

Saltwater – Oceans, tidal bays and sounds, and the tidal portions of rivers and streams.

Scouting – Evaluating the potential of fishing or hunting sites, or searching for places to fish or hunt. In the context of this survey, scouting for game and hunting cannot occur concurrently.

Screening interviews – The first Survey contact with a household. Screening interviews use brief conversations with one adult in each household to identify participants who

are eligible for in-depth interviews. In addition, screening interviews are used to gather some data about the individuals in the households, such as their age and sex. Screening interviews are discussed in the Survey Background and Method section of this report.

Secondary nonresidential activity – Seeing or hearing wildlife while on an outing that is taken for another purpose, such as camping, boating, or driving for pleasure. Not included are trips to other countries, trips of less than one mile from home, and trips for shopping or to go to work or school.

Secondary Residential Activity – Seeing or hearing wildlife while pursuing other activities within one mile of home (e.g., enjoying hearing songbirds while doing yard work).

Small Game – Grouse, partridge, pheasants, quail, rabbits, squirrels, and similar small animals and birds for which many states have small game seasons and bag limits.

SMSA – Standard Metropolitan Statistical Area - Except in the New England States, an SMSA is a county or group of contiguous counties containing at least one city of 50,000 or more inhabitants, or twin cities (i.e., cities with contiguous boundaries and constituting, for general social and economic purposes, a single community) with a combined population of at least 50,000. Also

included in an SMSA are contiguous counties that are socially and economically integrated with the central city. In the New England States, an SMSA consists of towns and cities instead of counties. Each SMSA must include at least one central city.

Special Equipment – Items of equipment including boats or pickup trucks that are owned primarily for wildlife-associated recreation. Items of special equipment are listed in Table 30 (fishing and hunting) and Table 66 (nonconsumptive).

Spenders – Individuals who make expenditures for fishing, hunting, or nonconsumptive activities or equipment.

Sportsmen – Individuals who engage in fishing, hunting, or both.

Trapping – Using traps, snares or other devices to capture furbearing animals for the primary purpose of getting fur pelts.

Trip – An outing involving fishing, hunting, or nonconsumptive activities, even if these recreational activities are not the primary purpose of the trip. In the context of this survey, a trip may begin from an individual's principal residence or from another place, such as a vacation home or the home of a relative, and a trip may last less than an hour, a day, or many days.

Type of fishing – Three types of fishing are reported: Fishing in (1)

freshwater, except Great Lakes, (2) the Great Lakes, and (3) saltwater.

Type of hunting – Four types of hunting are reported: Hunting for (1) big game, (2) small game, (3) migratory birds, and (4) other animals.

Urban – All persons living in urbanized areas and in places of 2,500 or more inhabitants outside urbanized areas. An urbanized area is a central city of 50,000 or more inhabitants, or twin cities (i.e., cities with contiguous boundaries and constituting, for general social and economic purposes, a single community) with a combined population of at least 50,000, and surrounding closely settled territory of 2,500 or more inhabitants.

Wetlands – In this report, wetlands are marshes, swamps, potholes, bogs, small lakes or ponds surrounded by wetland vegetation, and bottomlands that are sometimes flooded. Excluded are open bodies of water ten acres or more in surface area.

Wildlife – Animals such as birds, fish, insects, mammals, and reptiles that are living in natural or wild environments. Wildlife does not include either animals living in aquariums, zoos and other artificial surroundings, or domestic animals such as farm animals and pets.

Wildlife-Associated Recreation – Recreational fishing, hunting, or nonconsumptive wildlife use.

Appendix - B

Trapping in the U.S., 1985

Trapping is a wildlife-associated activity for the purpose of obtaining fur pelts. It involves a small portion of the population, and only some trapping is done for sport. The remaining trapping is a commercial activity. Therefore, only a very extensive survey or a census of the population could provide reliable trapping results at the regional or state level. In the case of the 1985 Survey, only national results are available. These results are tabulated below. All estimates are based upon screening interviews in which one adult household member responded for all household members.

Participation in Trapping: 1985

(Numbers in thousands)

Trappers and days of trapping	Total Trappers		16 Years Old and Older		6-15 Years Old	
	Number	Percent	Number	Percent	Number	Percent
Trappers						
Total trappers	508	100	447	100	62	100
Trapped for sport	316	62	275	62	41	66
Trapped for income	162	32	142	32	20	32
Did not specify	30	6	30	6
Trappers who trapped:						
Total, 1 day or more	508	100	447	100	62	100

Appendix C

Comparability with Previous Surveys

The 1985 National Survey of Fishing, Hunting, and Wildlife-Associated Recreation was designed for comparability with the 1955-1980 Surveys. Although complete comparability between any two surveys cannot be achieved, this Appendix compares the major findings of all the surveys and presents trends for major estimates. These trends were developed to compensate for the differences between definitions of categories of data that are discussed in the following sections under the headings of the year each survey was conducted.

1955-1970 Surveys

The 1955-1970 National Surveys included only "substantial participants." Under most circumstances, the surveys may be compared for totals, but the effects of differences should be considered when comparing the details of the surveys. The 1960, 1965, and 1970 National Surveys differed from the 1955 National Survey in classification of expenditures as outlined below.

1. Alaska and Hawaii were not included in the 1955 Survey.
2. Expenditure categories were more detailed in 1970 than they were in earlier surveys.
3. The 1960-1970 classification of some expenditures differs from the 1955 Survey in the following respects:
 - a. "Boats and boat motors" shown under "auxiliary equipment" were included in "equipment, other" in 1955.
 - b. "Entrance and other privilege fees" shown separately were included in "trip expenditures, other" in 1955.
 - c. "Snacks and refreshments" not included with "food" expenditures in the 1960-1970 reports were under "trip expenditures, other" in 1955.
 - d. Expenditures on equipment, magazines, club dues, licenses, and other similar items were classified by the one sport activity for which expenditures were chiefly made. In 1955, these expenditures were evenly divided among all the activities in which the sportsman took part.
 - e. Compared with 1955, the 1960-1970 Surveys reported fewer expenditures within the "other" category, because selected items were transferred to more appropriate categories.

f. Expenditures on alcoholic beverages were reported separately in the 1970 Survey.

g. In 1970, definition of a "substantial participant" was changed from one who spent at least \$5 during the year or spent 3 days fishing or hunting to one who spent \$7.50 for the year or spent 3 days fishing or hunting.

4. The number of waterfowl hunters in the 1970 Survey is not comparable with those reported in the 1960 and 1965 Surveys. In 1960 and 1965, respondent sportsmen were not included in the waterfowl hunter total if they reported that they went waterfowl hunting but did not take the trip chiefly to hunt waterfowl. In 1970, all respondents who reported that they had hunted waterfowl during 1970, regardless of trip purpose, were included in the total. The number of hunters who did not take trips chiefly to hunt waterfowl in 1970 was 1,054,000.

1975 Survey

In contrast to previous surveys which covered substantial participants 12 years old and older, the 1975 Survey based all the estimates on responses from individuals 9 years of age and older and did not select respondents based upon substantial participation as defined above. As a result, individuals who participated fewer than 3 days or spent less than \$7.50 on hunting or fishing were included in the estimates of participants, days of activity, and expenditures.

Categories of hunting and fishing expenditures differed from the previous four surveys in that only major categories were reported. For example, hunting equipment expenditures were not further delineated by subcategory. Similarly, no detail was provided within the category of fishing equipment expenditures. Expenses for "other" items such as daily entrance fees, magazines, club dues, and dogs were categorized as "other" in the 1975 report.

In addition to the above differences the 1975 Survey gathered data on species sought for the favorite hunting and fishing activity. These data replaced the "chiefly" category where hunting or fishing was the primary purpose of the trip or day of activity. Data omitted in the 1975 Survey that were included in previous surveys include the

respondents' population density of residence, occupation, and level of education.

1980-1985 Surveys

The 1980 and 1985 Surveys were similar. Each measured participants, rather than substantial participants. Questions were incorporated into the 1980 and 1985 Survey questionnaires to facilitate the construction of categories of data for comparisons with earlier surveys. The use of "chiefly" to delimit primary purpose appeared in the 1970 and prior surveys and its use was continued in the 1980 and 1985 Surveys. The expenditure categories in 1980 and 1985 are similar to the 1970 categories with the addition of fish finders, motor homes, and camper trucks as separate categories. The definition of fishing included the use of nets or seines and spear fishing.

As in the 1970 and 1975 Surveys, the 1980 and 1985 Surveys used a two-phase process to gather information from households and individuals. In the first phase, household respondents were asked to identify each participant 6 years of age and older who resided in their household. In comparison, the 1975 and 1970 Surveys screened households for participants who were 9 years of age and older. In the detailed interview phase, conducted in person in 1985, 1980 and 1970 and by mail in 1975, participants were eligible if they were 12 years old in 1970, 9 years old for the 1975 Survey, and 16 years old for the 1980 and 1985 Surveys. As a result, the population of hunters and fishermen is more narrowly defined in 1980 and 1985 to include individuals 16 years old and older. However, estimates of sportsmen 6 years old and over, 9 years old and over, and 12 years old and over are available for comparison with past surveys. Detailed expenditures data were not gathered for the 6-15 year-old category in 1980 and 1985.

The principle characteristics of the 1955-1985 Surveys are summarized in Table B-1. This table shows the scope and design of past surveys compared to the 1985 Survey.

Trends

Tables B-2 and B-3 show major findings from the seven national surveys for the number of participants who hunt and fish, the days they spend doing the activities, and their

expenditures. Where data are available, these tables can be used to assess trends in fishing and hunting from 1955 to 1985. For the purposes of the tables, the estimates for 1975, 1980 and 1985 were adjusted to conform as closely as possible to past definitions. Therefore, totals in these tables may be different from results elsewhere in this report, the 1980 report, or the 1975 report because of the exclusion here of individuals who participated for 2 days or less or spent less than \$11 on fishing or hunting in 1975 and \$15 in 1980 and 1985. Individuals who were younger than 12 years old are also excluded. The 1975 Survey data were further adjusted in the following ways. Those who fished for anadromous species were divided into freshwater and saltwater participants by counting all individuals who indicated anadromous fishing only in freshwater as freshwater fishermen and counting similarly for saltwater fishermen. An individual could be counted in both categories. Expenditures were designated as either freshwater or saltwater when the respondent indicated that the activity took place in only one kind of water. For those individuals who fished for anadromous species in both freshwater and saltwater, expenditures were apportioned according to the ratio of the days spent in each type of water. The categories for small game, migratory bird, and other hunting in the 1975 Survey were redefined as small game and waterfowl. All species except ducks and geese were included in small game. Participants, days, and expenditures were determined as follows for waterfowl, and all residual migratory bird participants, days, and expenditures were added to small game. If an individual only hunted for ducks or geese in the migratory bird category, the days and expenditures were tallied as waterfowl. If an individual hunted both ducks and geese, the greater number of days was used as waterfowl hunting days. It was assumed that both ducks and geese were hunted on the same day. If both waterfowl and other migratory birds were hunted by the same individual, expenditures were divided by the ratio of the days.

The 1975 Survey also included waterfowl hunting and days under a separate category of favorite and second favorite activity. The estimate

of waterfowl hunting days derived above was subtracted from respondents' answers indicating that waterfowl hunting was either their favorite or second favorite activity. The distribution of the differences was normal with 61 percent being zero. Thus, minimal bias is introduced into the estimated waterfowl hunters or the days of waterfowl hunting by the procedures used to evaluate these data. The 1980 and 1985 data that needed adjustment were the categories of small game, migratory birds, and other hunting. Expenditures for small game hunting were calculated as the sum of expenditures for small game, other hunting, and nonwaterfowl hunters who hunted for migratory birds. Expenditures for waterfowl hunting were estimated to be that portion of the migratory bird hunting expenditures that was spent by those who went waterfowl hunting.

The 1980 detailed estimates of participants, days, and expenditures were adjusted to account for the exclusion of the 12-15 year-old age group from the detailed interview phase of the 1980 survey. That age group had been included in previous surveys. Screening information on the 12-15 year-old age group was available. The proportion of 12-15 year-old sportsmen in 1970 participating in the various types of fishing and hunting was used to allocate 1980 12-15 year-old sportsmen between the various activities. Days of participation were handled in an identical manner. The 1980 estimates of expenditures were increased using the proportion of total expenditures in 1970 that were accounted for by the 12-15 year-old age category. Adjustments were also made to account for the change between 1970 and 1980 in the percentage of the sportsmen between the ages of 12 and 15. The 1970 Survey was used for making the adjustments because of the similarities between the 1970 and 1980 survey designs.

Since the 1985 Survey closely followed the 1980 Survey design, adjustments to 1985 estimates paralleled the 1980 adjustments. Small game hunting expenditures were calculated as in 1980. Expenditures for waterfowl hunting were calculated using the percentage of expenditures for migratory bird hunting that was accounted for by waterfowl hunting in 1980. Other adjustments were the same as in 1980.

Table B.1 Major Characteristics of Surveys: 1955-1985

Characteristic	1955	1960	1965	1970
Survey Design:

Appendix D – Sample Design and Statistical Reliability

This Appendix is partitioned into two parts. The first part, Tables 1–5, reports approximate standard errors and 95 percent confidence intervals for selected measures of participation and expenditures for wildlife-related recreation.

Except for minor style changes, the second part of this Appendix is the U.S. Bureau of the Census 'Source and Reliability Statement' for the Survey. This Statement describes the sampling design of the 1985 Survey and highlights the steps that were taken to produce estimates from the completed questionnaires. The Statement explains the use of standard errors and confidence intervals. Finally, it provides comprehensive information about errors that are characteristic of surveys, and it provides the formulas and factors that can be used to calculate an approximate standard error or confidence interval for each number published in this report, except the estimates on Table 1. In the case of Table 1, exact standard errors appear for each estimate in Table 12 of this Appendix.

Source and Reliability Statement for the 1985 Survey of Fishing, Hunting, and Wildlife Associated Recreation

Source for Data

The estimates shown in this report are based on the data collected in the '1985 Survey of Fishing, Hunting, and Wildlife-Associated Recreation.' The Survey was designed by the Bureau of the Census to provide state-level estimates of the participation rates for hunting and fishing, and other forms of wildlife recreation (e.g., wildlife observation) referred to as nonconsumptive participation. The Survey was conducted in two stages; an

initial screening of households to identify participants, and a followup enumeration of selected households with participants to collect detailed data about the household's wildlife-related recreation. The 1985 Survey sample was selected from expired Current Population Survey (CPS) samples. As such, it is a multistage stratified sample of the U.S. population.

Sample Design

A. CPS-Current Population Survey

The expired CPS samples used for the 1985 Survey had been selected initially from the 1980 census files with coverage in all 50 states and the District of Columbia. The samples, while active, had been continually updated to reflect new construction. The CPS samples used were located in more than 630 areas comprising more than 1,100 counties, independent cities, and minor civil divisions in the nation.

B. The FHWAR Screening Sample

The total screening sample consisted of roughly 130,900 households identified from expired CPS samples between March 1983, and February 1985. Expired CPS sample households were accumulated until the designated sample size for each state was obtained. The sample in each state was expected to yield a minimum of 1,500 interviewed households. On the average, about 2,600 households per state were contacted. Of these, roughly 15.3 percent were found to be vacant or otherwise not to be enumerated. Of the remaining households, roughly 7.4 percent could not be enumerated because the occupants were not found at home after repeated calls or were unavailable for some other reason. Overall, about 102,600 completed household interviews were obtained for a national response rate of approximately 92.6 percent. Roughly 70 percent of the interviewed households were contacted by telephone and the remaining interviewed households were contacted by personal visit. Interviewing for the screening sample was completed in late February of 1986.

C. The Detailed Samples

Sportsmen :

The sportsmen sample was selected in the following manner: Each household was assigned a level of participation

dependent upon the highest level of participation according to the screening interview for any sportsman in the household. This procedure grouped households into two levels of participation, substantial households, i.e., at least one household member fished or hunted for 30 days or more, or spent more than \$500 for fishing or hunting, and nonsubstantial households. These household groups were further subdivided by hunter and nonhunter classifications. All of the substantial households were revisited for detailed interviews, about $\frac{1}{2}$ of the nonsubstantial hunter households were revisited, and differential sampling rates i.e., 1 in 1 to 1 in 12, were applied to the remaining households (depending upon the state) to arrive at the designated sample size for interview within each state. Once a sportsman household was selected for detailed interviewing, all participants 16+, irrespective of their level of participation, were interviewed in detail. The detailed sportsmen sample consisted of roughly 420¹ households per state, selected from households identified from the screening sample as containing a sportsman. On the average, about 670 sportsmen per state were selected for detailed interviewing. Of these, roughly 10.4 percent were incorrectly classified as active sportsmen during the screening phase. Of those remaining, about 8.0 percent were not found at home after repeated calls, were unavailable for some other reasons, or were impossible to locate for detailed interviewing. Overall, 28,000 detailed sportsmen interviews were completed, for a national response rate of 92.0 percent. Detailed interviewing was completed in June 1986.

Nonconsumptive

The detailed nonconsumptive participant sample, also selected at the state level and interviewed at the same time as the sportsman sample, was selected from the screening sample of households containing at least one nonconsumptive participant, i.e., a household member 16+ who took special interest in wildlife around the home, or on a trip. All households selected for the sportsmen sample which contained at least one nonconsumptive user were placed in

one group. The remaining nonsportsmen households which contained at least one nonconsumptive participant (nonconsumptive participant only households) were placed in a second group. The households in each of the two groups were further categorized by type of participation: 1. Primary Nonresidential, 2. Primary Residential, 3. Secondary Nonresidential, and 4. Secondary Residential. All primary nonresidential households were revisited. Differential sampling rates were applied to the remaining groups to arrive at the designated sample size to be interviewed within each state. Roughly $\frac{1}{2}$ of the total sample came from each of the two major groups above. About 30,200 persons were designated for interviews. Of these, about 5.7 percent were incorrectly classified as active nonconsumptive participants during the screening phase. Of those remaining, about 6.3 percent were not found at home after repeated calls, were unavailable for other reasons, or were impossible to locate for detailed interviewing. Overall, about 26,700 interviews were completed for a response rate of about 93.7 percent.

Estimation Procedure

The estimation procedure for the samples of the 1985 FHWAR Survey involved the inflation of the weighted sample results to independent estimates of the population. A brief description of the major weight components by sample is given below.

A. Screening Sample

Base Weight. The reciprocal of the probability of selecting a household.

Missing Cases Adjustment. A factor to adjust the base weight of all data records to account for housing units designated for interview but for which a questionnaire was never returned for processing.

New Construction Adjustment. A factor to adjust the weights of all data records to account for our estimate of the new construction population not covered by the current sampling frame.

CPS Sample Adjustment. A factor to adjust the weights of data records to account for varying numbers of CPS rotation groups used to arrive at the designated sample size in each state.

Household Noninterview Adjustment. A factor to adjust the

weight assigned to interviewed households to account for households eligible for interview but for which an interview was not obtained (a noninterview record was on file).

First-Stage Adjustment. The 630+ areas designated for our samples were selected from roughly 1900 such areas of the United States. Some of our sample areas represent only themselves, and are referred to as self-representing. The remaining areas represent other areas similar in selected characteristics, and are thus designated nonself-representing. The first-stage factor reduced the component of variation arising out of sampling the nonself-representing areas.

Second-Stage Adjustment. This adjustment involved the inflation of the sample results to independently derived post-censal estimates of the civilian noninstitutional and nonbarrack military populations for the states. Overall, the second-stage ratio adjustment was 1.129.

B. Sportsmen Sample

Base Weight. The final person-tabulation weight developed from the weighting of the screening sample.

Stratum Adjustment. This factor inflated the weights of the sample households selected from the two level-of-participation categories to account for all households in the category.

Sportsmen Noninterview Adjustment. This factor adjusted the weights of the interviewed sportsmen to account for sportsmen intended for interview, but for whom one was not obtained.

C. Nonconsumptive Participant Sample

Base Weight. The base weight applied to nonconsumptive participant only households was the final person tabulation weight developed from the screening sample described above. The base weight for sportsmen households with nonconsumptive participants was the product of the sportsmen sample base weight and the stratum adjustment.

Nonconsumptive Participant Noninterview Adjustment. This factor adjusted the weights of the interviewed nonconsumptive participants to account for nonconsumptive participants intended for interview, but for whom one was not obtained.

¹The detailed sportsmen sample sizes varied considerably by state, ranging from about 10 households for the District of Columbia to about 670 households for California.

Reliability of Sample Estimates

The statistics² that this survey produced are estimates derived from a sample, and hence, are apt to differ somewhat from the actual values being estimated. This occurs because there are two types of errors possible in an estimate based on a sample survey—sampling errors and nonsampling errors. The accuracy of a survey result depends on both types of errors, but the full extent of the nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates. The standard errors calculated from parameters provided for the estimates primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure any systematic biases in the data. (Bias is the difference, averaged over all possible samples, between the sample estimate and the desired value.)

Nonsampling Errors

Let us suppose that a comparable complete enumeration was conducted, that is, an interview is attempted for every person 16+ in the United States. Chances are we would still not correctly estimate every parameter (for example, the proportion of persons who fished) under consideration. In this instance, the difference is due solely to nonsampling errors. Nonsampling errors occur also in sample surveys and can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of the respondents to provide correct information, inability to recall information, errors made in collection such as in recording or coding the data, errors made in processing the data, and errors made in estimating values for missing data. Explicit measures of these errors are generally not available. It is believed that most of the important operational and out of range

response errors were detected and corrected in the course of the Bureau's review of the data for accuracy and consistency. Unfortunately, some response and operational errors remain.

Another source of error in sample surveys is the failure to represent all units with the sample and all persons in sample households, (undercoverage). There were two particular undercoverage problems in this Survey: sample attrition, i.e., loss of the original sample due to nonreturns from the field, processing, etc., and failure to represent new construction in the sampling frame for the period roughly between March, 1983 and February, 1985. Overall undercoverage as compared to the level of the 1980 decennial census is about 7 percent. Generally, undercoverage is larger for males than for females and larger for blacks and other races combined than for whites. Ratio estimation to independent population controls, as described previously, partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the 1980 census.

Sampling Errors

The particular sample used for the 1985 Survey is one of a large number of all possible probability samples of the same size that could have been selected using the same sample design. Estimates derived from the different samples would differ from each other. This sample-to-sample variability is referred to as sampling error and is generally measured by the standard error. The exact sampling error is unknown, however, guides to the potential size of the sampling error are provided by the standard error of the estimate.

Since the standard error of a survey estimate attempts to provide a measure of the variation among the estimates from the possible samples, it is a measure of the precision with which an estimate from a particular sample approximates the average result of all

possible samples. The standard errors that were calculated for this Survey also partially measure the effect of variable nonsampling error but do not measure any systematic biases in the data.

The estimate and its associated standard error may be used to construct a confidence interval, that is, an interval having a prescribed probability that it would include the average result of all possible samples. The chances are about 90 out of 100 (90 percent) that the interval from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average value of all possible samples. Of course, any particular 90 percent confidence interval may or may not contain the average value of all possible samples, but for a particular sample, one can say with 90 percent confidence that the average of all possible samples is included in the constructed interval. Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing levels of hunters with levels of fishermen. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the population parameters are different when, in fact, they are identical.

To perform the most common test, let x and y be sample estimates for two characteristics of interest. Let the standard error on the difference $x-y$ be s_{diff} . If the ratio $R = (x-y)/s_{\text{diff}}$ is between -1.6 and +1.6, no conclusion about the difference between the characteristics is justified at the 10 percent level of significance. If, on the other hand, this ratio is smaller than -1.6 or larger than +1.6, the observed difference is significant at the 0.10 level. In this event, it is commonly accepted practice to say that the characteristics are different. Of course, sometimes this conclusion will be wrong. When the characteristics are, in fact, the same, there is a 10 percent chance of concluding that they are different. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that, for most

² Statistics for the population 6+, 6-15, 9+, and 12+ were derived from the screening interview; statistics for the population 16+ were derived from the detailed interviews.

differences cited in the text, the estimated difference between characteristics is greater than 1.6 times the standard error of the difference.

Standard Errors and Their Use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required.

Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard error parameters are provided for various types of characteristics. As a result, standard errors calculated from the parameters provided give an indication of the order of magnitude of the sampling error of an estimate rather than the precise sampling error.

Two or three parameters are used (denoted a, b and c) to calculate standard errors for each type of characteristic shown in this report. They are presented in Tables 6 through 11. The parameters were used to calculate the standard errors for levels and percentages of sportsmen, fishermen, or nonconsumptive participants and the standard errors of aggregates, i.e., trips, days, and expenditures for various types of participants. Methods for using the parameters to calculate standard errors of various characteristics are given in the following sections.

Standard Errors of Estimated Numbers. The approximate standard error, S_x , of an estimated number shown in this report can be obtained using the following formulas. Formula (1) is used to calculate the standard errors of levels of sportsmen, fishermen, and nonconsumptive participants.

$$S_x = \sqrt{ax^2 + bx} \quad (1)$$

Here x is the size of the estimate and a and b are the parameters in the table associated with the particular characteristics. Formula (2) is used for standard errors of the aggregates, i.e., trips, days, and expenditures.

$$S_x = \sqrt{ax^2 + bx + \frac{cx^2}{y}} \quad (2)$$

Here x is again the size of the estimate, y is the base of the estimate, and a , b , and c are the parameters in the tables associated with the particular characteristic.

Illustration of the Computation of the Standard Error of an Estimated Number. Suppose that a data table in this report shows that 30,000,000 persons 16+ either fished or hunted in the United States in 1985. Using formula (1) and the parameters $a = -0.00002468$ and $b = 4470$ from table 7, for the characteristic, sportsmen 16+, the estimate of the standard error on 30,000,000 sportsmen 16+ is

$$S_x = \sqrt{-0.00002468(30,000,000)^2 + (4470)(30,000,000)} \\ = 334,500$$

The 90 percent confidence interval is from 29,464,800 to 30,535,200 (using 1.6 times the standard error). Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples.

Suppose that another data table shows that hunters 16+ engaged in 334,013,000 days of participation in all hunting in 1985. Using formula (2) and the parameters $a = .00004061$, $b = -28147$, and $c = 10865$ from Table 9 for number of days, the estimate of the standard error on 334,013,000 days on a base of about 16,684,000 is

$$S_x = \sqrt{(.00004061)(334,013,000)^2 + (-28147)(334,013,000) + \frac{(10865)(334,013,000)^2}{16,684,000}} \\ = 8,233,000$$

The 90 percent confidence interval on the estimate of 334,013,000 days would be from 320,840,200 to 347,185,800 (using $1.6 \times 8,233,000$). Again, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way, would be correct for roughly 90 percent of all possible samples.

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are

in different categories, use the parameters in the tables indicated by the numerator. The approximate standard error, $S(x,p)$, of an estimated percentage can be obtained by use of formula (3).

$$S_{x,p} = \sqrt{\frac{b}{x} \cdot p \cdot (100 - p)} \quad (3)$$

Here x is the size of the subclass of sportsmen, hunters, etc., which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter in the tables associated with the particular characteristic in the numerator of the percentage.

Illustration of the Computation of the Standard Error of an Estimated Percentage. Assume that a data table in this report shows that of roughly 17,000,000 hunters 16+, 10.0 percent were black. From Table 7 the appropriate b parameter is 2484. Using formula (3), the approximate standard error on 10.0 percent is

$$S_{x,p} = \sqrt{\frac{2484}{17,000,000} \cdot (10.0)(100.0 - 10.0)} \\ = 0.36 \text{ percent}$$

Consequently, the 90 percent confidence interval as shown by the data is from 9.4 to 10.6 ($10.0 \pm 1.6 \times 0.36$).

Standard Error of a Difference. For the difference between two sample estimates, the standard error is approximately equal to

$$S_{x-y} = \sqrt{S_x^2 + S_y^2} \quad (4)$$

where S_x and S_y are the standard errors of the estimates x and y , respectively. The estimates can be levels, percents, ratios, etc. This will represent the actual standard error quite accurately for the difference between two estimates of the same characteristic in two different areas or for the difference between separate and uncorrelated characteristics in the

same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration of the Computation of the Standard Error of a Difference. Suppose that a data table shows that of about 17,000,000 hunters, 3,000,000 were in the age group 20-24, and 4,000,000 were in the age group 25-30. The corresponding percents are 17.6 percent and 23.5 percent respectively. The apparent difference between the percents of hunters 20-24 and hunters 25-30 is 5.9 percent. Using formula (3) and the appropriate b parameter from Table 7, the approximate standard error S_x , of 17.6 percent and 23.5 percent are 0.46 and 0.51 respectively. Using formula (4), the standard error of the apparent estimated difference of 5.9 percent is about

$$\sqrt{(0.46)^2 + (0.51)^2} = .69$$

This means that the 90 percent confidence interval on the difference between hunters aged 20-24, and hunters aged 25-30 is from 4.8 to 7.0 percent. Therefore, a conclusion that the average estimate derived from all possible sample lies within a range computed in this way would be correct for roughly 90 percent of all possible samples. Since this interval does not contain zero, we can conclude with 90 percent confidence that the percent of hunters aged 20-24 is smaller than the percent of hunters aged 25-30.

Standard Errors of Estimated Averages. Certain mean values for sportsmen, fishermen, etc. shown in the report were calculated as the ratio of two numbers. For example average days per fisherman is calculated as:

$$\frac{X}{Y} = \frac{\text{total days}}{\text{total fishermen}}$$

Standard errors for these averages may be approximated by the use of formula (5) below.

$$S_{x/y} = \sqrt{\left(\frac{X}{Y}\right)^2 \left[\left(\frac{S_x}{X}\right)^2 + \left(\frac{S_y}{Y}\right)^2 - 2r\left(\frac{S_x}{X}\right)\left(\frac{S_y}{Y}\right)\right]} \quad (5)$$

In formula (5), r represents the correlation coefficient between the numerator and the denominator of the estimate. In the above formula, use 0.7 as an estimate of r.

Illustration of the Computation of the Standard Error of an Estimated Average. Suppose that a data table in the report shows that the average days per hunter 16+ for all hunting was 20.0 days. Using formulas (1) and (2) above, we compute the standard error on total hunters, about 17,000,000, and total days, about 334,000,000, to be 195,600 and 7,705,000 respectively. The standard error on the average S_x , is

$$S_{x/y} = \sqrt{\left(\frac{334,000,000}{17,000,000}\right)^2 \left[\left(\frac{7,705,000}{334,000,000}\right)^2 + \left(\frac{195,600}{17,000,000}\right)^2 - 2(0.7)\left(\frac{7,705,000}{334,000,000}\right)\left(\frac{195,600}{17,000,000}\right)\right]} \\ = 0.35$$

Therefore, the 90 percent confidence interval on the estimated average of 20.0 days is from 19.4 to 20.6 days.

Table 5 Approximate Standard Errors and 95 Percent Confidence Intervals For Selected Nonconsumptive Estimates: 1985

	Estimate	Standard error	Lower 95%	Upper 95%
Nonconsumptive Participants (000)				
Total nonconsumptive	134,697	840	133,018	136,376
Total primary	109,597	890	107,816	111,378
Primary nonresidential	29,347	1,043	27,261	31,433
Observe wildlife	29,057	1,039	26,980	31,134
Photograph wildlife	13,563	736	12,091	15,035
Feed wildlife	13,063	723	11,617	14,509
Primary residential	105,286	893	103,500	107,072
Observe wildlife	63,641	833	61,976	65,306
Photograph wildlife	18,047	512	17,023	19,071
Feed wild birds	82,508	880	80,748	84,268
Feed other wildlife	23,741	578	22,585	24,897
Maintain natural areas	11,631	418	10,795	12,467
Maintain plantings	9,742	385	8,973	10,511
Visit public parks	16,480	491	15,497	17,463
Total secondary	127,427	861	125,706	129,148
Secondary nonresidential	89,532	889	87,754	91,310
Secondary residential	117,411	881	115,649	119,173
Days of participation in primary nonresidential activities (000)				
Total	338,513	87,139	164,234	512,792
Observe wildlife	309,846	79,682	150,483	469,209
Photograph wildlife	80,349	21,461	37,427	123,271
Feed wildlife	92,808	25,216	42,376	143,240
Average days of participation in primary nonresidential activities				
Total	11.5	2.70	6.1	16.9
Observe wildlife	10.7	2.49	5.7	15.6
Photograph wildlife	5.9	1.38	3.2	8.7
Feed wildlife	7.1	1.68	3.7	10.5
Expenditures (000)				
Total	\$14,267,213	\$1,656,669	\$10,953,874	\$17,580,552
Trip-related*	\$4,430,808	\$564,065	\$3,302,679	\$5,558,937
Food and lodging	\$2,513,206	\$329,447	\$1,854,312	\$3,172,100
Transportation	\$1,688,290	\$207,083	\$1,274,125	\$2,102,455
Other trip costs	\$229,311	\$29,945	\$169,421	\$289,201
Equipment	\$9,836,405	\$1,152,248	\$7,531,908	\$12,140,902
Nonconsumptive	\$3,615,476	\$416,472	\$2,782,532	\$4,448,420
Auxiliary	\$506,861	\$98,922	\$309,017	\$704,705
Special	\$5,233,751	\$1,736,934	\$1,759,884	\$8,707,618
Magazines	\$230,106	\$19,263	\$191,580	\$268,632
Membership dues and contributions	\$250,211	\$29,408	\$191,395	\$309,027

* Does not include secondary trip expenditures. Information on trip-related expenditures was collected for primary nonresidential participants only.
